

READ BY ALL CLASSES.

The Times of India Daily Edition has never been so influential or so widespread as to-day. Its circulation has increased by more than 100% since 1924. The Certified net sales are larger than the combined sales of any other three Daily newspapers in Northern, Southern, Central or Western India.

The Times of India is the most Powerful Daily organ of publicity in the Indian Empire. Its news service is thorough and comprehensive, the authority of its leading and special articles is unquestioned, and it is admitted to be, in the words of a Viceroy, "the ablest and best conducted newspaper in India."

ONE ANNA DAILY.

THE SYSTEM OF FINANCIAL ADMINISTRATION IN BRITISH INDIA.

By P K WATTAL

This work has been compiled entirely from official records and describes in plain language the present financial machinery of the Central and Provincial Governments and the financial powers of the reformed legislatures. In addition, it contains a lucid account of the system of accounts and audit, Government cash balances including the Gold Standard Reserve and Paper Currency Reserve balances. The work is intended for the use of members of the Legislative Councils, Ministers of Indian States and students of economics and Indian finance generally.

Preface to the XV Annual Volume

OF THE

INDIAN YEAR BOOK, 1928

THE Editors have to thank many correspondents who during the past year have sent them suggestions for the improvement of this book. The Indian Year Book is intended above all to be a book of reference, and its completeness and convenience of arrangement must necessarily depend to a great extent on the part taken in its editing by the members of the public who most use it.

The help extended to the Editors by various officials, and more particularly by the Indian Commercial Intelligence Department, has again been readily given and is most gratefully acknowledged. Without such help it would be impossible to produce the Year Book with up-to-date statistics.

Suggestions for the improvement or correction of the Year Book may be sent to the Editors at any time, but those which reach them before October have a better chance of being adopted than later suggestions which only reach them after the work of revision has been partly completed.

The Times of India, Bombay,

January, 1928

An Indian Glossary.

- ARKARI**.—Excess of liquors and drugs
- ARJUN**.—A corruption of the English officer
- ARHULWALA**.—Name of a princely family resident at the village of Ahlu near Lahore

ZAFANA.—The women's quarters in a house hence private education of women

ZIKRAT.—A Mahomedan shrine North Western Frontier

ZILA.—A District

The Peoples of India.

It is essential to bear in mind when dealing with the people of India that it is a continent rather than a country. Nowhere is the complex character of Indians more clearly exemplified than in the physical type of its inhabitants. No one would confuse the main types, such as Gurkhas, Pathans, Sikhs, Rajputs, Burmans, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differs altogether from those of Northern Asia and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. What, or why, be their origin, it is certain that they have settled in the country for countless ages and that their present physical characteristics have been evolved locally. They have been displaced in the North West by successive hordes of invaders, including Aryans, Scythians, Lithuans and Moghals, and in the North East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements and the pure Dravidians is a borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided by Sir Henry Haddon (Caste, Tribe and Race, Indian Census Report 1901, the Gazetteer of India, Ethnology and Caste Volume I, Chapter 6) into seven main physical types. There would be eight if the Andamanese were included, but this tiny group of Negritos may be disregarded.

The Turko-Iranian is represented by the Baluch, Brahui, Afghans of Baluchistan and the North West Frontier Province. Probably formed by a fusion of Tural and Persian elements in which the former predominate. Stature above mean, complexion fair, eyes mostly dark but occasionally grey, hair on face plentiful, head broad, nose noticeably narrow, prominent and very long. The features in these people that strikes one most prominently is the portentous length of their noses and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Rajputana, and Kashmir and having as its characteristic members the Rajputs, Khattris and Jats. This type which is readily distinguishable from the Turko-Iranian approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall, complexion fair, eyes dark, hair on face plentiful, head long, nose narrow, and prominent but not specially long.

The Scytho-Dravidian, comprising the Marathas, Brahmans, the Kanbis and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose and a lower orbito-nasal index. All of these characters, except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight, in the lower Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani found in the United Provinces in parts of Raj

putana and in Bihar and represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. Probably the result of the intermixture in varying proportions of the Indo-Aryan and Dravidian types. The head form is long with a tendency to medium, the complexion varies from lightish brown to black, the nose ranges from medium to broad, being always broader than among the Indo-Aryans, the stature is lower than in the latter group and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans, while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixture of the two characteristics are readily definable and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportions of the nose.

The Mongolo-Dravidian or Bengali type of Lower Bengal and Orissa, comprising the Bangal Brahmans and Kayasthas, the Mahomedans of Eastern Bengal and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements with a strain of Indo-Aryan blood in the higher groups. The head is broad, complexion dark, hair on face usually plentiful, stature medium, nose medium with a tendency to broad. This is one of the most distinctive types in India and its members may be recognised at a glance throughout the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east and probably includes the bulk of the population of Orissa, the western limit coincides approximately with the hill country of Chota Nagpur and Western Bengal.

The Mongoloid type of the Himalayas, Nepal, Assam and Burma represented by the Kanets of Lhalung, the Lepchas of Darjeeling and Sikkim, the Limbus, Marmis and Gurungs of Nepal, the Bodos of Assam, and the Burmese. The head is broad, complexion dark with a yellow tinge, hair on face scanty, stature short or below average, nose due to broad face characteristically flat, eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Panjavs of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens the stature is short or below mean, the complexion very dark, approaching black, hair plentiful, with an occasional tendency to curl, eyes dark, head long, nose very broad, sometimes depressed at the root, but not so as to make the face appear

that This race, the most primitive of the Indian types occupies the oldest geological formation in India, the medley of forest-clad ranges, terraced plateau and undulating plains which stretch roughly speaking from the Vindhya to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is continuous with the Ghats while further north it reaches on one side to the Aravallis and on the other to the Himalah Hills. Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people the type is remarkably uniform and distinctive. Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars of Arun cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta. Bangoon and Singapore he is recognizable at a glance by his black skin his

squat figure and the negro-like proportion of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear but even among them traces of the original stock survive in varying degree.

The areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. They melt into each other insensibly and although at the close of a day's journey from one ethnic tract to another an observer whose attention had been directed to the subject would realize clearly enough that the physical characteristics of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the transformation had taken place.

MAIN STATISTICS OF THE INDIAN EMPIRE.

The Indian Empire has an area of 1,805,332 square miles, about 3,000 square miles being added at the last census owing to the enumeration by estimate of certain tracts in Burma which had been excluded from previous censuses. Of the total area 1,094,300 square miles or 61 per cent lie in British Territory while the Indian States cover an area of 711,032 square miles or 39 per cent. The total population is 318,942,480. British Territory containing 147,003,293 persons or 77 per cent and the Indian States 71,939,187 persons or 23 per cent of the whole population. It is usual to illustrate

these figures by comparison with the countries of Europe and in respect of area and population the Indian Empire has been frequently compared to Europe without Russia. The war has, however, considerably altered the national and political distribution of countries and the new political map of Europe is perhaps hardly yet sufficiently familiar to form a graphic contrast. Turning further west we find that India with an area about half that of the United States has a population almost three times as large.

The most important statistics are set out in the following table—

	India	British Provinces	Indian States
Area in Square Miles	1 805 332	1 094 300	711 032
Number of Towns and Villages	68 7951	500 088	187 893
(a) Towns	2 316	1 561	755
(b) Villages	685 065	498 527	187 138
Number of Occupied Houses	65 198 389	50 441 636	14 756,753
(a) In Towns	6 785 014	5 048 820	1 119 194
(b) In Villages	58 433 375	45 394 816	13,637,559
Total Population	318 942 480	147 003 293	71 939 187
(a) In Towns	32 470,270	15 044 868	7 430 908
(b) In Villages	286 467,204	121 958 425	64,508,279
Males	163 995 554	126 872 116	37 123 448
(a) In Towns	17 84 248	18 971 136	3 874 112
(b) In Villages	146 150 306	112 900 980	33 249 336
Females	154 946,926	120 131 177	4 815,749
(a) In Towns	14 630 028	11 073,232	3 556 96
(b) In Villages	140 316 898	109 057,945	31 258 953

Density—Over the whole of India the population per square mile averages 177 the mean density in the British Provinces being 226 and in the States 101. If the districts (and small States) are taken as a unit and the cities are excluded the mean density ranges between a minimum of 1 and a maximum of 1,932 per square mile. The unequal distribution of the population of India is due to causes analysed in previous editions of the Year Book. It is chiefly dictated by physical conditions. Other influences are at work such as the state of law and order, the means of communication, climate and the existence of irrigation. Industrial factories are becoming more and more important as the population moves out of the congested rural tracts to supply the labour needed for industrial enterprise—for the tea in Assam

the docks and jute mills of Calcutta, the minerals of Bengal and Chota Nagpur, the cotton of Bombay and the coffee and rubber of Southern India. For the purposes of comparison the manner in which the population is distributed in other countries of the world is indicated in the following statement—

Belgium	654
England and Wales	649
France	184
Germany	332
The Netherlands	544
Austria	199
Spain	107
Japan	216
United States	32
New Zealand	1 18

MOVEMENT OF THE POPULATION

The population of India has increased by 1.2 per cent during the decade. The figures of previous censuses with the variations per cent are given below. The average increase since the census of 1872 falls at a rate of 5.5 per cent, but the real gain is considerably less than this figure owing to two factors: (a) the additions of area and population included in each census and (b) the progressive increase in the accuracy of the enumeration from census to census. So far as the present census is concerned the additional area and population included amount to 2.6 square miles and 86,388 persons respectively, while for the present purpose it may be taken that the enumeration of 1921 was as regards numbers accurate but not more accurate than that of 1911. The real increase in the population during the last 49 years is thus estimated at about fifty-four millions or 20.1 per cent.

Census of	Population	Variation per cent since previous census
1872	206,162,380	—
1881	220,438,330	+23.2
1891	247,814,671	+12.4
1901	264,381,006	+6.5
1911	310,166,396	+17.1
1921	318,942,480	+2.8

Factors in the Movement—The increase was slightly greater in the British districts (1.3) than in the States (1.0). Assam and Burma show comparatively high rates of increase. Immigration is an important factor in the rise in Assam but neither of these Provinces was exposed to the invasion of influenza which wiped out the whole of the natural increase in the Central Provinces and Berar, Bihar and Orissa and Bombay and substantially reduced the population in the United Provinces and Madhya Pradesh. The stimulus given to agricultural prosperity in the Punjab by a large expansion of canal irrigation did much to neutralise the effects of the high death rate in 1918. In Bengal and Madras unhealthy conditions were more localised and the development of the population was only partially retarded.

The War—The war itself had little direct effect on the population of India. Such effect could operate in three ways: (1) by death casualties, (2) by increasing the number of persons outside India at the census, and (3) by decreasing the birth rate. The actual number of death casualties among the officers and ranks of Indian Army units and labour corps was 58,285. The maximum number serving out of India in combat and labour units at any one time between 1914 and 1918 was approximately Indian troops 2,00,000, labour corps 2,30,000, total 4,30,000, the number about the time of the census being troops 1,05,000, labour corps 20,800, total 1,25,800. So far as the larger totals are concerned the war is not a direct factor of any importance in the census in any province.

Economic Conditions—In considering the economic factors which determined the movement of the population during the decade it can be divided into two periods, a fairly normal period from 1911 to 1917 and the disastrous epidemic year 1918 accompanied by scarcity and followed by a second crop failure in 1920. In 1917 conditions in India began to respond to the world conditions of the war, men for the fighting and labour units and food, munitions and war material of all kinds were demanded. The strain on the railway organisation, dislocation of the local markets and the distribution system of the country was impaired. The rising prices of imported necessities hit the poorer classes. Then followed the disastrous seasons of 1918 and 1919. Famine relief organisation was now so highly perfected in India that scarcity is not necessarily accompanied by high mortality but influenza starting in 1918 visited almost every portion of the country and in a few months wiped out the natural increase in the population of the previous seven years.

Public Health—The distinctive feature of the decade 1901-1911 was plague. The recorded number of deaths from plague in the ten years was 64 millions. In the recent decade the deaths were less than half that number. Cholera is normally most prevalent in the Eastern Provinces.

Virulent as the epidemic can still be when its hold is established it is now usually of a temporary and local nature and the total death rate in British India from the disease during the decade did not amount to more than 1.5 per cent. By far the largest number of deaths

in India are entered under the category of fever and allowing for inaccuracy of diagnosis it has usually been assumed that about two-thirds of the deaths so recorded may be attributed to malaria. Recent investigations made in special areas however suggest that the proportion has been considerably overestimated and that malaria only accounts for from one-fifth to one-fourth of the number of reported fever cases the remainder being cases of dysentery, pneumonia, phthisis and other diseases.

In the last few years the prevalence of an affection with which the cause of considerable mortality called *Relapsing Fever* has received considerable attention by the Health Department. This disease has been diagnosed as common in most parts of the country especially in the northern provinces and in the Central Provinces and Berar and Bombay but the extent of the mortality which can be attributed to it cannot at present be estimated. Nor can figures be given of phthisis, which undoubtedly responds for considerable mortality especially in the towns of western India, the death from this disease in Ahmedabad amounting in 1918 to 5 per mille of the population. All other factors in the health of the people have been overshadowed by the influenza epidemic of 1918 and 1919 which has dominated the population figures at the 1921 census.

Influenza—The influenza epidemic of 1918 invaded India in two distinct waves. The first infection apparently radiated from Bombay, but it is impossible to say where the more virulent virus of the second invasion came from.

The rural areas were most severely infected, the reason probably being that while villages have little advantage over towns in the matter of overcrowding, sanitation and ventilation the urban areas have the benefit of qualified medical aid and organized effort. Mortality was especially high among adults (40-40) particularly among adult females, the disease being generally fatal to women in pregnancy. At the worst period whole villages were almost entirely laid desolate by the disease. There was sometimes no means of disposing of the dead, even were left unburied and all local official action was largely paralyzed owing to the fact that the majority of the official staff were put out of action by the epidemic. To add to the distress the disease came at a period of widespread crop failure and reached its climax in November when the cold weather had set in and as the price of cloth happened at the time to be at its highest many were unable to provide themselves with the warm clothing that was essential in the case of an illness that so rapidly attacked the lungs. The disease lasted in most provinces well into 1919 and gave a high mortality in that year in Bengal and the United Provinces. Even after it had subsided there were in the Central Provinces, Bombay and Burma small recrudescences later in the year while local outbreaks continued over the country during the next two years.

There is no direct means of ascertaining the mortality from the epidemic. Various estimates

have been made based on the excess mortality over some suitable mean. The average of these calculations gives a total number of deaths in the areas under registration of about 7,100,000 in 1918 to which must be added as the results of similar calculation another 1½ million deaths in 1919 giving a total recorded mortality of nearly 8½ millions in the two years. Even this however must be a substantial under-estimate since owing to the complete breakdown of the reporting staff the registration of vital statistics was in many cases suspended during the progress of the epidemic in 1918.

The total influenza mortality for India is put at between 12 and 13 millions. This is a conservative estimate. Even this estimate makes the influenza mortality a large part of which occurred in three or four months, exceed by nearly two million the total estimated deaths from plague in twenty years. On an estimated case mortality of ten per cent the total number of persons affected was 12½ millions or two-fifths of the population of India. There was a further reaction on the birth rate.

Houses and Families—The average number of persons per house has not changed in the last decade, though there was a decline between 1901 and 1911. The trend of the figures varies in different provinces, but they do not afford substantial ground for any material inference. It would for example be expected that the incidence of the influenza mortality would fall fairly evenly upon the individual households and would therefore cause a reduction in the number of persons per house. It does not appear to have done so either in Bombay or the United Provinces, the Central Provinces or Rajasthan while in Bengal, where there is a rise in the population, there is a fall in the size of the household. The figures are an arbitrary and though they invite a discussion on the condition of the joint family it is doubtful if they can really be held to illuminate it. The general opinion of the Provincial Superintendents is that they do not do so and that other indications do not show that the joint family system has yet undergone any radical change at any rate in the agricultural tracts of the country.

Census	Persons per house	Houses per square mile
1921	4.9	86.1
1911	4.9	30.8
1901	5.2	31.6
1891	5.4	33.9
1881	5.8	31.7

Notes—

- (1) The figures for the Provinces are inclusive of the States attached to them except in the case of Madras where they exclude Cochin and Travancore.
- (2) The Actual and Natural population shown in this table is less by 58,500 persons owing to the exclusion of Aden where Table XI was not compiled.
- (3) Columns 2 and 6—Persons not enumerated by birth place or whose birth place was not returned have been included in these columns.
- (4) Columns 4 and 8—The figures against India in columns 4 and 8 represent emigrants to foreign countries. Details of which for 1921 will be found in Subsidary Table V of Chapter III.

Future Population of India—A study of the growth of the population of India and the problems which it presents is vitiated by the abnormal conditions of the past decade. It was pointed out in the census report of 1911 that the rate of increase of population between 1872 and 1911 was equivalent to about 19 per cent. and that at this rate the population would double itself in about a century and a half. The real increase in the last fifty years in the population of India is just over 20 per cent. At this rate the doubling will take another 190 years. But calculations of this kind, though of interest can hardly be taken seriously. Almost every one of the last five decades has witnessed some special disaster. A severe famine in South India checked the increase in the decade 1872-1881. The decennium 1891-1901 was dominated by the great famines of the closing period. Growth in North and Western India was checked in the succeeding decade by plague and we have had in the past decennium an epidemic which has caused more concentrated mortality than any previous calamity. The decade 1881-1891 alone

was free from any exceptional calamity and is usually considered a period of fairly normal progress.

Difference between the birth rate and death rate estimated by the authority for certain provinces in certain decades

Province	1881-1891	1901-1911
Bengal	7.0	7.3
Bombay	13.9	6.2
Madras		11.1
Malabar	13.5	8.5
Punjab	9.5	5.7
United Provinces	6.5	0.6
Combined Provinces		6.5

TOWN AND COUNTRY

The progress of urbanisation in India—If there has been any progress at all—has been very slow during the past thirty years. The whole increase being less than one per cent. An examination of the statistics shows that whilst towns with populations above 50,000 increased by over 16 per cent. in the decade the increase was considerably less in those

between 5,000 and 50,000, whereas the population of towns between 10 to 20 thousand did not keep abreast of the progress of the general population of the country. The statistics reveal the gradual decadence of the medium-size country towns and the growth of the larger cities under the influence of commercial and industrial development.

Population of the Chief Towns

19

DISTRIBUTION OF POPULATION IN GROUPS OF TOWNS ACCORDING TO SIZE AND IN RURAL TERRITORY

Class of places	1921		1921
	Places	Population	Percent
Total Population	68,793,5	318,017,531	100.0
Urban Territory	2,813	32,418,776	10.2

Peshawar and Cantonment	104,452	34,317	249	+4.7
Rawalpindi and Cantonment	101,142	11,802	532	+17.0

In these statistics the population of Calcutta is taken as embracing the suburbs and this method is apparently adopted in dealing with Calcutta only. It is not for instance adopted in dealing with the considerable suburbs of Bombay just outside the limits of the Island. The actual population of Calcutta within the Municipal area is 885 813.

Migration.—Of the population of the Indian Empire only 603 526 were enumerated as born in other parts of the world. Of these about four-fifths came from other Asiatic countries such as Nepal, Afghanistan, China, Siam, Ceylon and Arabia and the remainder mostly from Great Britain and other countries of Europe. The emigration from India is approximately 1 738 110 as the numbers who move between India and other countries is about two millions. Of the total immigrant population of 107 000 in Burma 573 000 are Indians, 102 000 Chinese, representing 40 and 15 per cent respectively of the whole number. Of the Provinces which contribute most largely to the streams of migrants the most conspicuous are Bihar and Orissa about 1½ million, the United Provinces about 1 million, Madras ½ of a million, Rajputana 3 ½ of a million and Hyderabad 1½ of a million. The number of persons resident in India who were born outside the Indian Empire is 603 526 and of these 274 000 were born in Nepal, 118 000 in the British Isles, 108 000 in China and 48 000 in Afghanistan.

The statistics of emigration outside India are far from complete.

The number of Indians belonging to regiments and labour corps outside India at the time of the census was about 125 000. Of these the majority were probably in Mesopotamia and Palestine. According to the return

the number of Indians in the colonies irrespective of birth place amounts to 1 662 000, of whom 1,028 000 or about two-thirds are males. More than four-fifths are Hindus and about half of the remainder are Mussulmans. The colonies which attract an appreciable number of emigrants are shown below. About one-ninth of the emigrants failed to specify their province of birth and of the remainder no less than 841 000 or 80 per cent were from Madras, 24 000 from Bombay, 18 000 from the Punjab, 17 000 from the North West Frontier Province and 11 000 from Bengal. The majority of the emigrants work as agricultural labourers on rubber, tea, coffee and other plantations. Under the Defence of India Rules indentured labour emigration was stopped in March 1917 but there had been a considerable outflow of labourers to the colonies in the previous years and more than 2½ millions of natives of India passed through the ports of Madras and Calcutta as indentured labourers for the various colonies during the decade. Of the labourers 38 000 went from Calcutta but the bulk were from the Madras Presidency and their destination was Ceylon and the Straits Settlements. There is very little emigration from the ports of Bombay and Karachi. Altogether about two million labourers returned to India from the colonies during the decade.

RELIGIONS

The subject of religion is severely controversial in India where often it is coloured by politics and racialism. As the Year Book aims at being impartial all disputed inferences are excluded. Speaking broadly of every hundred persons in the Indian Empire 78 are Hindus, 22 Mahomedans, 3 Buddhists, 3 followers of the religion of their tribes, one is a Chris-

tian and one a Sikh. Of the remaining 2 one is equally likely to be a Buddhist or a Christian and the other most probably a Jain, much less probably a Parsi and just as possibly either a Jew, a Brahmin or a holder of indefinite beliefs. The enumerated totals of the Indian religions are set out in the following table:—

Religion	Actual number in 1921 (1900 & omitted)	Proportion per 10 000 of population in 1921	Variation per cent (Increase + Decrease -) 1911-1921
Indo-Aryan	232 223	7362	+ 1
Hindu	116 736	6866	— 4
Brahmanic	216 281	6841	— 5
Arya	468	15	+ 92.1
Brahmo	6	2	+ 16.1
Sikh	3,239	103	+ 7.4
Jain	1 178	37	— 5.6
Buddhist	11 571	366	+ 7.9
Iranian [Zoroastrian (Parsi)]	102	3	+ 1.7
Semitic	73 511	2325	+ 4.2
Mussulman	68 725	2,174	+ 5.1
Christian	4 784	150	+ 22.6
Jew	22	6	+ 3.8
Primitive (Tribal)	9,775	309	— 51.1
Miscellaneous (Minor Religions and religions not returned)	18	1	— 51.5

The Hindus largely predominate in the centre and south of India and in the Madras Presidency they are no less than 89 per cent of the population. Hindus are in the majority in Assam, Bihar and Orissa. In the United Provinces the Central India tracts Rajputana and Bombay Muhammadans monopolize the North West Frontier Province Baluchistan and Kashmir and are considerable in excess in the Punjab and Eastern Bengal and Sind. They form about 23 per cent of the population of Assam 14 per cent in the United Provinces and 10 per cent in Hyderabad. The Buddhists are almost entirely confined to Burma where they are 8½ per cent of the population. The Sikhs are localized in the Punjab and the Jains in Rajputana Ajmer Merwara and the neighbouring States. Those who were classed as following Tribal Religions are chiefly found in Bihar and Orissa the Central Provinces and Assam but Bengal, Burma Madras Rajputana Central India and Hyderabad also returned a considerable number under this head. More than three fifths of the total number of Christians reside in South India including the Hyderabad State. The remainder are scattered over the continent.

the larger numbers being returned in the Punjab the United Provinces Bengal Bihar and Orissa, Burma Bombay and Assam. The Parsis and Jews are chiefly residents of the Bombay Presidency.

Christians—The Christian community now numbers just 4½ millions of persons in India or 1½ per cent of the population. Fifty nine per cent of Christians are returned from the Madras Presidency and its States and the community can claim 32 persons in every 1,000 of the population of the British districts of Madras and as large a proportion as 27 per cent in Cochin and 29 per cent in Travancore where the increase during the decade was about 30 per cent. Elsewhere the Christians are scattered over the larger Provinces and States of India the Punjab and Bihar and Orissa each having over 200 thousand. Bombay Burma and the United Provinces between 200 and 300 thousands and Bengal and Assam between 100 and 150 thousands. Divided racially Europeans (and allied races) number 178 thousands. Anglo Indians 113 thousands and Indians nearly 4½ millions so that out of every 100 Christians 88 are Indians 4 are Europeans and 3 are Anglo Indians.

large. The large number of Indian widows is due partly to the early age of marriage partly to the disparity in the ages of the husbands and wives but chiefly to the prejudice against the remarriage of widows. The higher castes of Hindus forbid it altogether and as the custom

is held to be a mark of social respectability many of the more ambitious of the lower castes have adopted it by way of raising their social status while Muhammadans who are closely brought into touch with their Hindu neighbours are apt to share the prejudice.

Proportion of widows in the population per 1000

Age	India, 1921	England and Wales 1911	Age	India, 1921	England and Wales 1911
All ages	175.0	73.0	20-25	71.6	1.5
0-5	7		25-30	146.0	13.1
5-10	4.5		30-35	325.2	50.0
10-15	16.8		35-40	619.4	193.3
15-20	41.4		40 and over	834.0	545.9

Early Marriage.—The figures clearly show an increase in the numbers of those in the early age categories who are still unmarried. The movement is most marked in the Hindu community but is shared by the other religions.

The change being less noticeable among the Buddhist and Christian communities who are not addicted to early marriage. The change is most conspicuous in the age categories 10 to 15 for women and 10 to 20 for men.

SOCIAL AND ECONOMIC CONDITIONS

Literacy.—The number of persons in India literate in the sense of being able to write a letter and read the reply is 22.6 millions amounting to children under five years of age are excluded to 2.5 in every thousand of the population. Of males 139 in every thousand at age five and above are literate the corresponding proportion in the case of females being 21.

The Hindus have one literate person in every thirteen for males the ratio is one in eight and for females one in sixty three. The proportion of Sikh males who are literate is less than that of Hindus. One Mahomedan male in 11 and one female in 116 can read and write. The low position of Mussalmans is partly due to the fact that in Bengal the Punjab North West Frontier Province and Sind where they predominate they are mostly agricultural. Where they are in a minority as in the Central Provinces United Provinces and Madras they are usually town dwellers and have a considerably higher proportion of literates. The Hindu community embraces every stratum of society and the proportion of literacy is seriously affected by the inclusion of the vast masses of the lower rural classes. Some of the higher Hindu castes have more literate males than the Parsis whilst others are on a level with or even below the aboriginal tribes.

English.—In the whole of India 2.5 million persons or 160 males and 18 females in every ten thousand persons of each sex aged five and over can read and write English.

One in thirty males in Bengal and one in forty-three in Bombay are literate in English.

In Madras Assam and Burma the proportion is 2 per cent. while in Bihar Orissa the Central Provinces and the United Provinces it is below 1 per cent. Of the States Cochin and Travancore have between 3 and 4 per cent. but in others the proportions are much lower. More than half the number of Parsi males and one fourth of their females can read and write English. Of Christians nearly all the Europeans and many of the Anglo-Indian are literate in English but except in the southern coast English literacy is rare among the Indian Christians and the regional proportions therefore largely follow the racial distribution. Though the proportions in the other communities taken on the total population are small some of the higher castes have a fairly large number of English knowing members. In Bengal about half of the Baidya males and a quarter of the Brahman and Kayastha males are literate in English while in Madras more than a quarter of the Tamil Brahmans can claim this accomplishment. Of the Jain in Kathiawar nearly a tenth are literate in English though the Chaturch Jains of Kolhapur who are cultivators are less literate than the average of the Presidency. During the decade the number of males knowing English rose by 61 per cent. and that of females by 57 per cent. Among the main Provinces the greatest progress has been made by Bengal Assam and Bombay and in the States by Cochin Travancore Mysore and Baroda.

Languages.—In the whole Indian Empire 222 languages were returned at the census, this fact as has been previously explained, not having been separately considered. The

principal languages are given in the following statement —

Language	Number of speakers in (000s omitted)		Percentage of increase or decrease
	1921	1911	
Western Hindi	96 714	96 041	+ 1
Bengali	49,294	48 468	+ 2
Pengu	22 601	22 548	+ 2
Marathi	18 798	19 807	- 5
Tamil	18 780	16 126	+ 4
Punjabi	16,234	16 877	+ 2
Rajasthani	12 661	14 066	-10
Kannarese	10 374	10 226	- 1
Oriya	10 143	10 162	- 2
Gujarati	9 552	9,238	+ 3
Burmese	7 423	7 894	+ 7
Malayalam	7 496	6 792	+10
Lahnda or Western Punjabi	5 652	4 779	+18

The necessity of a common medium of conversation and intercourse which has given rise to bilingualism and the consequent displacement

of tribal languages has formed the subject of a considerable amount of discussion and suggestion during the last decade and a good deal has been written on the possibility of a *lingua franca* for India. The combined speakers of Eastern and Western Hindi considerably exceed in number the strength of any other individual language in India and if we add to these two languages Bhatti and Rajasthani, which so resemble Hindi as to be frequently returned under that name in the census schedules we get well over 100 millions of speakers of tongues which have some considerable affinities and cover a very large area of northern and central India. In their pure forms these four languages may be scientifically distinct but this is not the popular view. There is a common element in the main languages of northern and central India which renders their speakers without any great conscious change in their speech mutually intelligible to one another and this common basis already forms an approach to a *lingua franca* over a large part of India.

Infirmities—These are classes under four main heads—Insanity, deaf mutism, blindness and leprosy. The appended statement shows the number of persons suffering from each infirmity at each of the last five censuses and the proportion per hundred thousand of the population —

Infirmity	NUMBER AFFLICTED WITH RATIO PER HUNDRED THOUSAND OF THE POPULATION				
	1921	1911	1901	1891	1881
Insane	88 806	81 006	66,205	74,279	81 130
	23	26	23	27	35
Deaf mutes	189 644	199 891	153 164	196 861	197,215
	60	64	52	75	86
Blind	479 637	443 653	354 104	458 988	526,748
	152	142	121	167	229
Lepers	102 513	100 094	97 340	120 244	131,968
	32	35	33	46	57
TOTAL	860 099	833 644	670 817	806 252	937 068
	272	267	229	315	407

There had been a continuous decline in the total number as well as in the proportion of persons recorded as afflicted up to 1901. This fall has been ascribed partly to a progressive improvement in the accuracy of the diagnosis and partly to an actual decrease in the prevalence of the infirmities owing to the improvement in the material condition of the people to better sanitation and (especially in the case of blindness) to the increasing number of cures effected with the aid of modern medical and surgical science. In the decade ending 1901 the relatively high mortality of the afflicted in the two severe famines must have been a considerable factor in the decline shown at that census, but the method of compilation adopted in 1901 and in the previous census was defective and, certainly in 1901, many of the persons

afflicted must have escaped notice in the course of tabulation. Compared with the year 1891 there was a slight decrease in the total number of persons recorded as afflicted in 1911 the proportion per hundred thousand persons falling from 315 to 267. The small increase in the present decade amounting to 26 455 persons or one per 100 000 may be due to improvement in record and tabulation but is certainly unexpected.

Caste—The enormous complexity of the caste system makes it impossible to give more than the briefest results here. The curious must be referred to the extensive literature on the subject, and to the whole chain of census reports where it is discussed in various aspects. All we can do here is to give the census figures of the main castes, with a comparison with 1911

Variation in certain main castes

There has been much discussion of recent years of the position and numbers of the Depressed Classes—a term which has never been accurately defined but which may be described as the classes outside the pale of

Hindu Society. Their numbers are given in the census as between 30 and 60 millions.

The main figures of Europeans and Anglo-Indians are given below—

Province, State or Agency	European and Allied Races in 1921			Total European and Allied Races in 1921	Anglo-Indians	
	British Subjects	Others	Total		1921	1911
India	163 916	10 109	174 025	10, 608	113 012	100 420
Provinces	149 620	9 124	157 644	174 130	96 529	86 196
States and Agencies	15 393	1 015	16 408	10 499	16 483	14 224

OCCUPATIONS

India is essentially an agricultural country and agriculture proper supports 224 millions of persons or 71 per cent of the population of the Empire. If we add the pastoral and hunting occupations the percentage rises to 73 while a considerable proportion of the unemployed, large number of persons in the category of vague and unclassifiable occupations are probably labourers closely connected with the occupations of the land. Industries support 10 per cent of the population but the bulk of these are engaged in unorganised industries connected with the supply of personal and household necessities and the simple implements of work.

Organized industries occupy only 1 per cent of the people. In trade and transport, on which less than 6 per cent and 2 per cent respectively depend a not inconsiderable number are connected with the disposal of the various kinds of agricultural products. The administration and protection of the country engage only 4·24·9 persons or 14 per cent of the population and the remainder are supported by domestic, miscellaneous and unproductive occupations. Though the extent to which agriculture predominates in individual provinces varies there is no region in which it does not in some form easily take the first place.

In spite of the trade of Calcutta and the numerous industrial and mining concerns of Bengal and Bihar and Orissa the population of the eastern provinces is overwhelmingly agricultural and contains a higher percentage of persons supported by the land than any other tract of India. Of industrial workers the largest proportions in the local population are in the Punjab the United Provinces and Bombay. Of these three provinces however agriculture dominates the economic life of the first two where the industrial occupations though they engage a substantial number of persons are mostly of the cottage industry type. In Bombay the development of organized industry is of some economic importance but is at present largely confined to a few of the biggest cities. In the category of unclassified occupations the majority of persons are labourers whose particular form of labour is unspecified and the rest mostly unspecified clerks.

Compared with 1911 the agriculturists have increased a little faster than the total population, though fishermen and hunters are fewer. Miners have risen in number with the recent expansion of the industry. Industries have substantially decreased and of the principal forms of industry the textile workers have dropped considerably as also have potters and workers in wood and metal. An increase under transport by rail is countered by a drop under transport by road. Trade has increased, trade in textiles showing a slight rise and trade in food a slight drop. The number employed in public administration is practically stationary but the army has risen while the police has fallen heavily. Law and medicine have gained at the expense of religion and though instruction has spread letters have fallen. Rentiers are fewer and domestic servants as many. Beggars and vagrants the raw material of crime and disease have decreased but criminals the finished article have risen in numbers.

NOTE — Occupation was not recorded for 2 887,249 persons

Collieries.—Of a total of 238 thousand supported by collieries 205 thousand are actual workers. The most important coal mines are in the provinces of Bihar and Orissa and Bengal. The Jherria coal field in Manbhum the importance of which is due to its accessibility and the superior quality of its coal alone produces over fifty per cent of the total annual output of coal in India. According to the industrial census the total population employed in the coal mines of Manbhum was 32,619 of whom 347 were managers, 1,516 belonged to the supervising and technical staff and 1,482 to the clerical staff while 32,843 were skilled and 46,428 unskilled workers.

Textiles—Cotton.—Of the industries the textile industries are by far the most important; the number of persons occupied in industries connected with cotton being returned as 5,872,000 or just three-quarters of the whole number of those supported by textile industries.

The bulk of the organized establishments are in the western tracts where the large cities owe a considerable portion of their prosperity to the development of the textile industries and the cotton growing country is covered with mechanically worked gins and presses for the preliminary treatment of the raw material. Of the 2,037 establishments connected with cotton manufacture employing in all 434,600 persons no less than 79% establishments with 277,000 employees or 64 per cent of the personnel belong to the western Presidency and its States.

Jute.—The spinning, pressing and weaving of jute support a population of 493,000 as compared with 362,860 ten years ago. There are a few mills and presses in Assam, Bihar and Orissa and Madras but the industry is practically confined to Bengal.

Nature of Ownership.—Of the total number of 16,608 establishments 6.7% are owned by Government, 8,292 by registered companies and 11,837 by private persons. The Government owned concerns are mostly railway and engineering workshops and other concerns such as brick and tile factories connected with the construction of roads and building and printing presses. The tea and rubber plantations are mostly the property of companies. Out of the 795 tea plantations in Assam 632 belong to companies. On the other hand the coffee plantations of Madras which are much smaller in number than the tea gardens are mostly privately owned, only 23 out of 127 belonging to companies in Madras and 10 out of 242 in Mysore. The collieries are mostly company owned but of the 42 manganese mines of the Central Provinces half are owned by companies and half by private persons. Of the 392 cotton spinning mills in Bombay 333 are private owned but of the cotton weaving mills 129 out of 145 are owned by companies. Similarly the jute presses are mostly private, while 80 out of the 62 jute mills of Bengal are company owned. Practically all the printing presses are private concerns and so are a large number of the general workshops and such concerns like flour and rice mills and brick and tile works which are mostly on a small scale. European companies own the majority of the tea gardens of

Assam and Bengal but as has already been seen Indian enterprise is growing in regard to the private ventures. Indigo in Bihar and Orissa, coffee in Madras and rubber in Travancore are mostly in European hands but the coffee plantations of Mysore are largely owned by Indians. Most of the large collieries of Bengal are held by European companies but 65 out of the 73 private concerns belong to Indians. The cotton industry of Western India is almost entirely Indian while the jute mills of Bengal are in European hands though the small presses are mostly owned by Indians. The rice and flour mills and the brick and tile factories with the exception of a few large concerns are in the hands of Indians.

Women as Workers.—The adult women (unskilled) number 503 per 1,000 adult men and the proportion of the children of both sexes under 14 years old is 140 per 1,000 adults. By far the majority of women labourers are out of 540 thousand are on the plantations where their proportion per 100 men is as high as 84, the children being 190 per 1,000 adults. Women and children are also numerous in the textile and mining industries and in the former there are 408 adult women (unskilled) per 1,000 men and in the latter 521. Nearly 30 per cent of the women employed in textile industries are recorded as skilled. About 81 per cent of the total number of children employed in organized industries are boys and the girls almost equal the boys on the plantations and in the mines and form about one fifth of the child labour in the textile industries. In the larger industries (20 persons and above) both female and child labour has dropped since 1911 the proportion of women (unskilled) being 115 now against 561 in 1911 per 1,000 men and the proportion of children per 1,000 adults 141 against 191 in 1911. The figures vary curiously in different industries and suggest that they are not altogether trustworthy. Women have increased in the plantations and textiles and declined in the mines. Children have decreased in the plantations and textiles and increased in the mines. Both women and children find considerable employment in the establishments connected with glass, pottery, cement and building and to a less extent in those of food and dress.

Occupation of Europeans.—Of the 103,405 male Europeans 63,388 belong in some capacity to the category of Public Force i.e., the Army, Navy, Air Force and Police over 9,000 to Transport (i.e. largely railway officials) and about 6,000 to Public Administration, 4,600 to Mines and Industries, 5,000 to professions, 4,600 to trade while there are about 4,200 imperfect entries a number which together with the known deficiency in the census of Europeans generally somewhat detracts from the value of the details. The abnormal constitution of the foreign European population is exhibited by the small number of dependants i.e. 62,000 as against 111,000 workers whereas the number of Anglo-Indian dependants is just about double the number of their workers. Nearly one-third of the Anglo-Indian males are employed on Transport i.e. chiefly Railway and the remainder mostly find employment as clerks and upper subordinates.

Manners and Customs.

Next to the complexion of the people which varies from fair to black the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury wears nothing more and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women who at one time wore a few leaves before and behind and were totally innocent of clothing do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna with all the jewels on his person is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loin-cloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress he wears a long robe reaching at least down to the calves, the sleeves may be wide, or long and sometimes puffed from the wrist to the elbow. Before Europeans introduced buttons a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left the Hindu to the right. A shawl is tied round the waist over the long coat and serves as a belt in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head dress. More than seventy shapes of caps, hats, and turbans may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal in Burma and in Madras other varieties prevail. Cones and cylinders domes and truncated pyramids, high and low with sides at different angles, folded brims projecting brims, long strips of cloth wound round the head or the cap in all possible ways ingeniously culminating perhaps in the parrot's beak of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi and whether he hails from Poona or Dhurwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket, yet as he must work for long hours in water he would not cover his legs but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy

trousers, a tall head-dress befitting his stature and covers his ears with ja folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day or a compromise between the Indian and European costume; notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes, those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist with ends in front and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats or drawers or both are worn. Many Mussulman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are purdah and their dress and persons are hidden by a veil when they appear in public, a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a coil upon by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and over the neck, and grow it in the centre the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere, where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual fashions. Hindu ascetics, known as Sadhus or Bhagis as distinguished from Sanyasis, do not dip their hair and generally coil the uncombed hair of the head into a crest in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist—until motherhood is attained and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like lotuses, the rose, and the champeka, are among the most popular objects of representation in gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity it is said to represent her. A more elaborate mark on the forehead has the shape of U or V generally with the central line, sometimes without it and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *scoroparius gentiana*, strung together are worn round their necks by Vaishnavas and Shalvas respectively. The Lingayats, a Shaiva sect, suspend from their necks a metallic casket containing the linga or phallus of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green. The Bikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased. Shiva has the largest number of worshippers. He has three eyes, one in his forehead, a moon's crescent in his matted hair and at the top of the coil a woman's face representing the river Ganges. His abode is the Mount Kailas in the Himalayas, from which the river takes its source. Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls. In his hands are several weapons, especially a trident, a bow and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise. He sits on a tiger's skin and his vehicle is a *rice-field bull*. His wife Parvati and his son are mostly on his thighs. An esoteric mean-

ing is attached to every part of his physical personality. The three eyes denote an insight into the past, present and future, the moon, the serpents, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer. He is also worshipped as a Linga or phallus which represents creative energy.

Ganpati—Ganesha or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India. Every undertaking is begun with a prayer to him. He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand. He is said to have broken it off when he wanted to attack the moon for ridiculing him. The different parts of his body are also esoterically explained. His vehicle is a rat.

Parvati—Parvati the female energy of Shiva is worshipped under various names and forms. She is at the head of all female supernatural powers, many of whom are her own manifestations. Some are benign and beautiful others terrible and ugly. Kali the tutelary deity of Kailash or Calcutta, is one of her fierce manifestations. In this form she is black, a tongue smeared with blood projects from her gaping mouth besides her weapons, she carries corpses in her hands and round her neck are skulls. Bombay also takes its name from a goddess, Mumbadevi. Gouri, to whom offerings are made in Indian homes at an annual festival is benign. On the other hand the epidemic diseases like the plague and small pox are caused by certain goddesses or mothers.

Vishnu the second member of the Hindu trinity is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality. His home is the ocean of milk, where he reclines on the coils of a huge many-headed serpent. At his feet sits Lakshmi, shampooing his legs. From his navel issues a lotus, on which is seated Brahma, the third member of the trinity. In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers and on his breast are shining jewels. As Shiva represents destruction, Vishnu represents protection, and his son is the god of love. To carry on the work of protection he incarnates himself from time to time and more temples are dedicated nowadays to his most popular incarnations Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands. He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands is Hanuman, the monkey chieftain, who assisted him in his expedition against Ravana the abductor of his wife. Krishna is also a human figure generally represented as playing on a flute, with which he charmed the damsels of his city esoterically explained to mean his devotees.

Brahma is seldom worshipped, only a couple of temples dedicated to him have yet been discovered in all India.

Minor Deities.—The minor gods and goddesses and the deified heroes and heroines who fill the Hindu pantheon, and to whom shrines are erected and worship is offered, constitute a legion. Many of them enjoy a local reputation, are unknown to sacred literature, and are worshipped chiefly by the lower classes. Some of them though not mentioned in ancient literature, are celebrated in the works of modern saints.

The Jains in their temples adore the sacred personages who founded and developed their sect and venerate some of the deities common to Hinduism. But their view of Divinity is different from the Hindu conception and in the opinion of Hindu theologians they are atheists. So also the Buddhists of Burma pay almost the same veneration to Prince Siddhartha as if he was a god and indeed elevate him above the Hindu gods, but from the Hindu standpoint they are also saints.

Images.—Besides invisible powers and deified persons, the Hindus venerate certain animals, trees and inanimate objects. This veneration must have originated in gratitude, fear, wonder and belief in spirits as the cause of all good or harm. Some of the animals are vehicles of certain gods and goddesses—the eagle of Vishnu, the swan of Brahma, the peacock of Saraswati, Hanuman the monkey of Rama, one serpent upholds the earth, another, makes Vishnu bed. Elephants support the ends of the universe, besides one such animal bring Indra's vehicle, the goddess Durga or Kali rides on a tiger, one of Vishnu's incarnations was partly man and partly lion. The cow is a useful animal to the Brahman, vegetarian her milk is indispensable and he treats her as his mother. So did the Rishi of old who often subsisted on milk and fruits and roots. To the agriculturist cattle are indispensable. The snake excites fear. Stones in which the image of a serpent is carved, may be

seen under many trees by the roadside. The principal trees and plants worshipped are the Sacred Fig or Pipal, the Banyan, the Sacred Basil, the Bilva or Wood Apple, the Asoka, and the Acacia. They are in one way or another associated with some deity. The sun, the moon, and certain planets are among the heavenly bodies venerated. The ocean and certain great rivers are held sacred. Certain mountains, perhaps because they are the abodes of gods and Rishis, are holy. Pebbles from the Ganges and the Narmada, which have curious lines upon them are worshipped in many households and temples.

Worship.—Without going into a temple, one can get a fair idea of image worship by seeing how a serpent-stone is treated under a tree. It is washed, smeared with sandal, decorated with flowers, food in a vessel is placed before it, lamps are waved, and the worshipper goes round it and bows down his head, or prostrates himself before the image. In a temple larger bells are used than the small ones that are brought to such a place. Jewels are placed on the idol and the offerings are on a larger scale. Idols are carried in public procession in palanquins or cars. The lower classes sacrifice animals before their gods and goddesses.

Domestic Life.—Of the daily domestic life of the people a tourist cannot see much. He may see a marriage or funeral procession. In the former he may notice how a bridegroom or bride is decorated, the latter may shock him for a Hindu dead body is generally carried on a few pieces of bamboo lashed together, a thin cloth is thrown over it and the body is tied to the frame. The Mahomedan bier is more decent and resembles the Christian coffin. Some Hindus however carry the dead to the burial ground in a palanquin with great pomp. The higher castes cremate the dead, others bury them. Burial is also the custom of the Muslims, and the Parsis expose the dead in Towers of Silence.

Indian Names.

The personal name of most Hindus denotes a material object, colour or quality, an animal, a relationship, or a deity. The uneducated man who cannot correctly pronounce long Sanskrit words is content to call his child father, brother, uncle, or mother or sister as the case may be. This practice survives among the higher classes as well. Appa, Nani, Anna, Rao, Babaji, Bapu, Lal, Bhai, Shankar, Tatacharya, Jijibhai are names of this description, with honorific titles added. It is possible that in early society the belief in the rebirth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black or red, gold or silver, gem, diamond, ruby, pearl, or merely a stone, small or tall, weak or strong, a lion, a snake, a parrot or a dog, and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means

white, and so does Arjuna. Krishna black. Bhima terrible. Nakula a mongOOSE. Shunaka a dog. Shuka a parrot. Shringa a horn. Among the names prevalent at the present day Hira is a diamond. Ratna or Ratan a jewel. Sonu or Chinna gold. Velli or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human.

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he dedicates early names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. There are also sonorous and picturesque. Shiva is happy, Vishnu is a perverse, Govinda is the cowherd, Krishna Keshava has fine hair, Rama is a delighter, Lakshmana is lucky, Narayana produced the first living being on the primeval waters, Ganesh is the Lord of Shiva's hosts, Dinakara is the luminary that makes the day, Subrahmanya is a brother of Ganesh, Sita is a furrow, Sairi a ray of light, Tara a star, Radha prosperity, Rukmini is she of golden ornaments, Bhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names and they may be freely drawn upon and paraphrased in naming one's children, and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her off-spring unattractive to the powers of darkness she gives them ugly names such as Kuru, rubbish, or Ukirda, dunghill, or Martoba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri just as men are sometimes called after mountains. Mann counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of devousness and unconstanity as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom: if a child is born on a Monday its name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday with a dental.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishya's, and Dasa to a Shudra's. This rule is fairly well observed in the case of the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot deign to call himself the servant of some god. Thus, although Kalidasa, the famous poet, was a Shudra, Ramadasa, the famous guru of Shivaji, was a Brahmin. The Vaishya has become this fashion of calling oneself a servant of some god exceedingly popular and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Ghidmal, means brave and has the same force. Raja changed into Ray, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names like Bose and Ghose

Dutta and Mitra, Sen and Gupta, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Bhat, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayyar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffices like Ji as in Ramji or Jambhedji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession in some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahadavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller and a third a liquor seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix kar or wallah is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkar and Suratwallahs or without these affixes we may have Bhavnagar, Malabar and Billmorias as among Parsis. Thus Vasudev Paudurang Chiplunkar would be a Hindu, whose personal name is Vasudev, father's name Paudurang and family name derived from the village of Chiplun is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses and their names are derived from their religious and secular history. Their names and titles are often as long and picturesque as Hindu appellations. The agnomen Baksh, Din, Ghulam, Khwaja, Fakir, Kasim, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan have meanings which throw light on Muslim customs and institutions. The Parsis also have no gods and goddesses and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Battiwallah, Ready-money Contractor, Saklatwallah, Adenwallah and others like them are tell tale names.

Conversions.—As a rule, a child is named soon after it is born, and in the case of males the appellation is not changed. The higher Hindu castes have a separate ceremony called the name-giving ceremony performed on the twelfth day after birth. When a girl is married in these castes, the husband's family give her a new personal name. When a boy is invested with the sacred thread and is made a twice-born, his name is not changed, but when a man joins an order of ascetics, his lay name is dropped, and he assumes a new name. So also when a Burman joins an order of monks or nuns, the lay name is superseded by a Pali name. Christian converts change their original name when they are baptised.

Indian Art.

In India there has never been so marked a separation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, Industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting.

Historical.—The degree of proficiency attained in art by Indians prior to B.C. 350 can only be conjectured by their advancement in literature and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them, or direct records of artistic work of an earlier date than B.C. 350 do not exist. The chief historic schools of architecture are as follows:—

Name.	Dates	Locality of the best Examples
Buddhist	B.C. 250— A.D. 750	Ellora, Ajanta, Kailash, Sanchi
Jaina	A.D. 1000— 1500	Ellora, Mount Abu, Palitana
Brahminical	A.D. 500 to the present	Ellora, Elephanta, Orissa, Bhuvanadeswar, Dharwar
Chalukyan	A.D. 1000— 1200	Umber, Somnathpur, Ballur
Dravidian	A.D. 1350— 1750	Ellora, Tanjore, Madurai, Tinnevely
Pathan	A.D. 1200— 1550	Ichli, Mandu, Jaunpore.
Indo-Saracenic	A.D. 1320— 1780	Lahore, Delhi, Agra, Amber, Bijapur

Buddhist Architecture is mainly exemplified by the rock cut temples and monasteries found in Western India and in the *Taper* or sacred mounds. The interior decorations, and external *facades* of the former and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the *facades* to admit light, and colonnades of pillars with richly ornamented capitals in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint, a porch, and an enclosed courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamented with a central oval and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without

losing its own special characteristics of which the star-shaped plan of the shrine, with the five-fold bands of external ornament, is the principal feature. Pathan Architecture was introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are fine examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosques and tombs at Ahmedabad already show Hindu influence but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date exhibit a certain Turkish influence, especially in the great tomb of Mahmond. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and fine proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fatehpore-Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghats or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term was executed for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Triclinic in the last named of these temples ranks for majesty

and expressive grandeur with the greatest masterpieces of Egyptian art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement the fine sense of decorative arrangements of line and mass and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels, and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is as a rule, kept very low and is mainly confined to the decoration of mouldings, architraves, lintels or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles.

Painting.—Much of the carved stonework upon ancient Indian buildings was first plastered and then decorated with colour but the only paintings in the modern acceptance of the term now existing which were executed prior to the Moghul period are those upon the walls of the cave temples at Ajanta. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture but with an added freedom of expression due to the more tractable vehicle employed. They remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of fresco and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. Their origin is as wrapped in mystery as is that of the artists who painted them for no other paintings of similar power and character are known to exist and the artists, so far as is known, left no successors. Nine hundred years elapsed between the completion of the Ajanta paintings and the commencement of the second period of Indian painting. This owed its origin to the introduction of Persian artists by the Moghul Emperor Akbar and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jahangir and Shah Jahan. Unlike the works of the Ajanta painters which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water colour upon paper or vellum, resembling in technique the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character, this phase of development being closely allied to the art

the calligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing keen insight into character, harmonious colour, fine decorative feeling and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu offshoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school although highly decorative in character were not intended for exhibition upon the walls of rooms, according to Western practice and when not used as illustrations or decorations to manuscript books, were preserved in portfolios. As this school of painting was the last expression of traditional art in India, in the restricted sense here applied to the term and, as the question has a distinct bearing upon the modern development of painting a few words may be added regarding the difference between the conventions followed by Eastern and Western painters. Until the middle of the fourteenth century the conventions of both East and West were practically the same though the use of them differed according to environment and national temperament. These conventions the artists of the East have retained and development has been upon the line of decorative fitness, harmony of colour and expressive action. Their art has throughout been decorative and when natural objects have been depicted their treatment has been that of a flat pattern. The European painters after the period above mentioned on the contrary sought to attain the appearance of actuality in the objects depicted by the study of the science of light and shade, and perspective and in achieving this end, and developing it into the realisation of atmosphere and light, they sacrificed a large measure of the decorative quality which characterised the work of the earlier school. Eastern artists have ignored or been blind to light and shade and in works entirely free from European influence one will look in vain for any suggestion of it in their figures or for shadows of objects cast upon the ground. During the last fifty years there has been a strong movement toward a return to decorative conventions, on the part of European artists who have assimilated much that the East has to teach them, without thereby affecting the distinctively Western character of their work. Indian and Japanese artists have been less successful when attempting the reverse of this practice, and appear to lose whatever is best in their traditional practice without acquiring the finer qualities of that of the West.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic development in India so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule and partly to the tendency strongly inherent in the Indian artist

to become stereotyped in his practice. All foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age instead of seeking new motifs for artistic treatment. So purely mechanical did the work become that in some of the schools or guilds of painters the execution of a single picture was subdivided: one craftsman painted the face, a second the drapery and a third the background. Such methods could only lead to deterioration and decay. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757 very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny the Company was too fully occupied in fighting for its existence, extending its borders and settling the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country Greek and its derivative styles of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public servants were all imported from England and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archaeologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1858. In England itself, the first fifty years of the nineteenth century was a period of gross commercial and artistic degradation, but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The Schools of Art then instituted throughout England were initiated in a timid and tentative manner in India, and were attached to the educational system which had been previously modelled upon a definitely European basis. These schools of art, it should be remembered, were specially established to assist the artistic industries of the country and not to provide instruction in architecture, sculpture and painting. In fact at a subsequent period they narrowly escaped extinction by the Secretary of State upon the ground that they had become schools of painting and had thus

been diverted from performing the original function for which they were established. The work of the Schools of Art in regard to industrial art is referred to elsewhere and as two of them that at Madras and that at Lahore have confined their activities almost exclusively to this branch of the subject it is necessary to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field, for in addition to classes for modelling, painting and design it possesses a special school of architecture, a range of technical workshops in which instruction is given in the applied arts and research laboratories and studios devoted solely to the improvement of the Pottery industry. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who several years ago was the Principal of the Calcutta School, banished from within its walls every vestige of European art and claimed that the traditional art of India in its old forms, is not dead but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability backed by intense enthusiasm for the views he held, which he advocated with admirable persistence he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic disciple in Mr. Abanindranath Tagore, an artist of fine imagination and fancy endowed with technical ability of a high order combined with a serious devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precepts, founded about fifteen years ago what has since become known as the Calcutta School of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists whom they took as their models and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput schools and as time has passed, their outlook appears to have shifted and, while retaining the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford and the movement has had to depend for encourage-

ment mainly upon Europeans in England and India.

Bombay School of Art—The attitude towards the development of art in modern India taken by Mr Cecil Burns, who long guided the policy of the Bombay school, was diametrically opposite to that favoured by Mr Havell. While yielding to no one in his admiration for the ancient art of India and giving every encouragement to his students to study its masterpieces, the view he takes is that with European literature dominating the system under which the educated classes in India are trained with European ideas, and science permeating the professional, commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past. That without this spirit, the conventionalities the ancient artists adopted are mere dead hewing and that to copy these would be as unprofitable as it would be for the artists of Europe to hew themselves to the conventionalities of the Greek and Roman sculptors or to those of the mediæval painters that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art and that, with the wide adoption of European styles of architecture in India it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as line and accurate drawing in its widest sense, composition and design, and the science of colour harmony. By means of these an artist can express his individuality and emotions, and Mr Burns held that the main function of a School of Art is to equip its students with the power of expression, untrammelled by any set conventions, so that when they leave the school, they do so with the capacity to employ their faculties in any direction their sympathies and tastes may impel them to take. Which of these two very divergent theories will produce the result both these gentlemen unite in wishing to see brought to pass, time alone will show. Certain it is that the driving force of any artistic impulse must come from within the nation and that India, like every other country in its art, as in other matters, must work out its own salvation.

One striking success of hopeful surgery has been achieved by the Bombay School in recent years. This is the establishment of a flourishing school of architecture in which the study of Indian architecture takes an important place

Connected with this school is a students architectural association designed to keep past students in touch with the school and with each other. As architecture embraces and includes every branch of decorative and industrial art, it is to be hoped that this school may be the means whereby the ancient glories of India architecture will be some day revived in new forms, bringing in its train a vitalising influence upon every other form of artistic activity.

Mural Painting—Mr W E Gladstone Solomon, the present Principal, has studiously avoided any dogmatic theories as to the ultimate end which Indian art is destined to attain, though he has consistently pointed out the Indian's pre-eminence in the decoration of wall spaces. The guiding principle with Mr Solomon has been to teach the students to draw and to paint what they see, and further to encourage by all possible means their natural progress in the direction towards which their inherent instinct most obviously urges them. He has always maintained that theory in regard to the training of Indian Art students is in itself unproductive, and can only be proven by practice, and as Mr Solomon has now held the post of Principal for several years it is possible to gauge the results achieved by his system of training. The Life Classes which were started at the end of 1912 have recently been pronounced by competent judges as well up to the level of the Life Classes of the European Schools of Art. But proficiency in technique forms only one side of the present system of training for even in Europe too much of the study from life is quite capable of negating its own object. In India, where the decorative instinct is inherent and where the possibilities of freehand drawing are still unexplored, the danger of overdoing the Life Class is even more palpable. So side by side with these realistic aids to study and at the same period a Class of Indian Decorative Painting was inaugurated in the Bombay School of Art. As this class specialises in Mural Painting it has long been popularly known as the Class of Mural Painting. This class has executed the decorations for many public and private buildings, and painted the ceiling and panels of a specially constructed Indian Room which was exhibited at Wembley in 1924. A great deal of controversy, which has been characterized by its academic rather than its practical note, has centred round these new movements in art training in India, but the Bombay School of Art has retained the patronage and support of the public, and the increase in the numbers of its students has been large and continuous since it took its present life. It is significant that the widespread revival of public interest in Art in Western India has synchronised with these activities.

Indian Architecture.

I ANCIENT

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilisation, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European art culture that it is only one European in a hundred who can entirely understand it while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Hitherto the one and with a few exceptions the only recognized authority on the subject has been Ferguson, whose compendious work is that which will find most ready acceptance by the general reader. But Ferguson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions and it is sometimes held that he was a man of too purely European a culture albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Ferguson's classification by races and religions is however the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christ era, and that India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion to the great Asoka, who reigned B.C. 272 to 232.

Buddhist Work.

Ferguson's first architectural period is then the Buddhist, of which the great topes at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajanta, Nasik, Ellora and Kanheri. A point of little relation to the Gandhara work may be urged to be passing. This is the strong European tendency variously recognized as Roman, Byzantine but most frequently as Greek to be observed in the details. The village seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. Even this has been a fairly common assumption among some authorities that Indian art owed much of the best to European influence an assumption that is strenuously combated by some as will be pointed out later.

The architecture of the Jaina comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique Tower of Victory at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples at Ellora, where the remarkable 'Kylas' is an instance of a temple cut out of the solid rock complex, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is as it were, a life-size model of a complete building or group of buildings several hundred feet in length not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Velore, Vijayanagar &c and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Ferguson's two next divisions of classification, the Chalukyan, or South-central India, and the Northern or Indo-Aryan style. The differences and the similarities are apparently so intermixed and confusing that he is fain to fall back on the broad generic title of Hindu—however unsatisfactory he may thereby stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study—Those at Mukteswar and Bhuvanagar in Orissa at Khajuraho, Bindraban, Udaipur, Benares, Gwalior &c. The palace of the Hindu Raja Man Singh at Gwalior is one of the most beautiful architectural examples in India. So also are the palaces of Amber, Dattya, Uchha, Dik and Udaipur.

Indo-Saracenic

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the Indo-Saracenic which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome not entirely an unknown feature hitherto became a special object of development while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a ban on the use of sculptured ornaments of animate objects in the adornment of the buildings, and led to the development

of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty more richness of sculptured surface and the aesthetic and symbolic interest of detail being no longer to be depended on to the same degree.

The art was thus the gainer by the new conditions. It gained in power and variety much as 'Classic' architecture gained under the Romans. But it equally lost something too. The Indo-Saracenic is apt to appear cold and hard. The writer was impressed by this on his first view of the Gwalior palace already mentioned. Though a Hindu building that palace has yet much of what might be called the more sophisticated quality of the Indo-Saracenic work as well as some similarity of detail. It has being Hindu a certain amount of sculptured ornament of animated forms, and the general effect of roundness, richness and interest thereby imparted seemed eloquent in suggestion as to what is lacking in so many of the Mahomedan buildings.

Foreign Influence

There would appear to be a conflict between archaeologists as to the extent of the effect on Indian art produced by foreign influence under the Mahomedans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency the development of new forms and modes of treatment to which allusion has been made the similarities to be found between the Mahomedan buildings of India and those of North Africa and Europe, the introduction of the minaret and above all the historical evidences that exist of the presence in India of Europeans during Mogul times are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Greece, and the best things in art by way of Greece. To them the Gandharan sculpture instead of being the best is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauty and significance not to be seen in the Græco-Bactrian sculptures and point to those of Borobudur in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position as showing the best examples of the art extant. It is probable that a just estimate of the merits of the controversy with respect to sculpture at any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo-Mahomedan and Hindu buildings outweigh those between Indian and Western Mahomedan work, especially in the light of the dissimilarity between the latter. They admit the changes produced by the advent of Islam but contend that the art, though modified,

yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome the arch they contended, though developed under the Moslem influence were yet so far as their detailed treatment and craftsmanship are concerned rendered in a manner distinctively Indian. Ferguson is usually regarded as the leader of the former school, while the latter and comparatively recent school has at present found an eager champion in Mr. E. B. Havell whose works on the subject are recommended for study side by side with those of the former writer. Mr. Havell practically discards Ferguson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi.

Agra and Delhi may be regarded as the principal centres of the Indo Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri his tomb at Secundra, the Moti Masjid and palace buildings at the Agra fort. At Delhi we have the great Jamma Masjid the Fort the tombs of Humayun Suddar Jung &c., and the unique Qutb Minar. Two other great centres may be mentioned because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan both in the Bombay Presidency.

Ahmedabad

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms a tendency to adhere to the lintel and bracket rather than to have recourse to the arch while the dome though constantly employed was there never developed to its full extent as elsewhere or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone jail—or pierced lattice-work as in the palm tree windows of the Sidi Sayyid Masjid.

Bijapur

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome was developed to a remarkable degree. Indeed the tomb of Mahmud—the well known Gol Gumbaz—is cited as showing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shows a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognise among other influences

that of the prevailing material, the hard un-
compromising Dekkan basalt. In a similar
manner the characteristics of the Ahmedabad
work with its greater richness of ornamenta-
tion are bound up with the nature of the Gujarat
freestone while at Delhi and Agra the free-

choice of materials available—the local red
and white sandstones, combined with access
to marble and other more costly materials—
was no doubt largely responsible for the many
easily recognizable characteristics of the archi-
tecture of these centres.

II MODERN

The modern architectural work of India
divides itself sharply into two classes. There
is first that of the indigenous Indian master
builder to be found chiefly in the Native
States, particularly those in Rajputana.
Second there is that of British India or of
all those parts of the peninsula wherever
Western ideas and methods have most strongly
spread their influence chiefly, in the case of
architecture, through the medium of the De-
partment of Public Works. The work of that
department has been much misunderstood
upon as being all that building should not be,
but, considering it has been produced by men
of whom it was admittedly not the better and
who were necessarily contending with lack of
expert training on the one hand and with de-
partmental methods on the other it must be
conceded that it can show many notable build-
ings. Of recent years there has been a ten-
dency on the part of professional architects
to turn their attention to India, and a number
of these has even been drafted into the service
of Government as the result of a policy in-
stituted in Lord Curzon's Viceroyalty. In time
therefore and with the growth of the influence
of these men such of the reproach against
the building of the British in India as was just
and was not merely thoughtlessly maintained
as a corollary to the popular jape against every
thing official may gradually be removed. If
this is so as to Government work progress should
be even more assured in the free atmosphere
outside of official life. Already in certain of
the greater cities where the trained modern
architect has established himself in private
practice there are signs that his influence is
beginning to be felt. He still complains how-
ever that the general public of India needs
much educating up to a recognition of his
value both in a pecuniary sense and other-
wise. It is also to be observed that the sur-
vival of a relic of the popular idea of the time
before his advent, to the effect that though
an architect might occasionally design
a building it was always an engineer who built
it is still indicated by the architect in some
cases deeming it advisable to style himself
architect and engineer.

To the work of the indigenous master
builder public attention has of recent years
been drawn with some insistence and the sug-
gestion has been pressed that efforts should be
directed towards devising means for the pre-
servation of what is pointed out—and now
universally acknowledged—to be a remarkable
survival—almost the only one left in the world—
of living art, but which is threatened with
gradual extinction by reason of the spread of
Western ideals and fashions. The matter

assumed some years ago the form of a mild
controversy centring round the question of the
then much discussed project of the Government
of India's new capital at Delhi. It was urged
that this project should be utilised to give the
required impetus to Indian art rather than
that it should be made a means of fostering
European art which needed no such encourage-
ment at India's expense. The advocates of
this view appear for the most part to have been
adherents of the indigenous Indian school
of archaeologists already mentioned, and to
have based their ideas on their own reading of
the past. They still muster a considerable
following not only amongst the artistic public
of England and India, but even within the
Government services. Their opponents holding
what appears to be the more official view both
as to archaeology and art have pointed to the

death of all the arts of the past in other
countries as an indication of a natural law and
deprecate as waste of energy all efforts to resist
this law or to institute what they have termed

another futile revival. The British in India
they contend should do as did the ancient
Romans in every country on which they planted
their conquering foot. As those were wont to
replace indigenous art with that of Rome, so
should we set our seal of conquest permanently
on India by the erection of examples of the best
of British art. This is the view which as we have
indicated appears to have obtained for the
moment the more influential hearing, and the
task of designing and directing the construction
of the principal buildings in the new capital has
accordingly been entrusted jointly to a London
and to a South African architect neither of
whom can be unduly influenced by either past
or recent architectural practice so far as India
is concerned.

But this controversy however vital to
the interests of the country's architecture is
too purely technical and academic for its merits
to be estimated by the general reader or dis-
cussed here. Its chief claim on our attention
lies in the fact that it affords an added interest
to the tourist who may see the fruits of both
schools of thought in the various modern build-
ings of British India as well as examples of the
master builders' work in nearly every native
town and bazaar. The town of Ladak in
Uttar Pradesh may be cited as peculiarly rich
in instances of picturesque modern Indian
street architecture while at Jaipur, Udaipur,
Agra etc. this class of work may be studied
in many different forms both civil and religious.
The extent to which the unbroken tradition
from the past exists may there be judged
by the traveller who is architect enough for
the purpose.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprise those applied to articles devoted to religious ritual, military weapons and trappings, domestic accessories and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity; the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reserve, intellect and good taste. The Hindus are lavish, and often underlining, in their employment of ornament; the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have been absorbed, and are now stamped with a definite Indian character. Recognition of this fact alone should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahmikaval Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Medieval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed; the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carver's art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practice of the wood worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical; that of their craftsmanship vigour rather than refinement. In the carving of the human figure and of animals great power of expressive action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used, dictated lower relief and greater refinement in the carving, while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay and other ornamental details appears to be inexhaustible while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stone was of Italian origin, it proved to be so eminently suited to the tastes of the Indian craftsmen, and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious

stones by Indian jewellers may have been referred to Sir George Birdwood states that "the Indian jeweller thinks of producing the sumptuous imposing effect of dazzling variety of rich and brilliant colours and nothing of the purity of the gems. This is true in a general sense and 'half many a gem of purest ray serene' was utterly ruined by crude cutting and polishing. But although as early as the sixteenth and seventeenth centuries diamonds and precious stones from the Indian mines were taken to Europe to be cut, many of the finest jewels found their way back to the treasure houses of Indian princes.

Wood Work—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, most of the ancient wood work has been destroyed by the action of the climate and the seeming insectivorous life of India and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Nashik, and other parts of Western India are notable for their picturesque and beauty the structural beams, the overhanging balconies with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal while in some cases the wooden basis was entirely plated with copper brass or silver. In Southern India, where close grained sandalwood—growing, jewel cases and boxes are enriched with carved executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work—With the exception of weaving, the metal working industry employed and still employs the greatest number of artists in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand and the shapes are those which grow naturally from the working of the material with the simplest implements. In the technical treatment of

brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver a higher standard of technical and constructive excellence has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the slightest technical fault is apparent on a plain surface but can be hidden or disguised if one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious but judged by this test their work often exhibit a lack of care and exactness in the structural portion and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose. For many generations ornaments of gold and silver were regarded in the light of portable wealth a practice which naturally made for massiveness. These gold ornaments are most effective and picturesque and, despite an enormous outlay of elaborate and delicate work from their hands, the most valuable contribution of the Indian metal workers to the sum total of man's artistic use of the precious metals will probably be found to lie in a certain barbaric note which distinguishes these pieces—a note not present in the craft work of other countries. In the design of Hindu gold and silver ornaments religious symbols have been extensively used. The ornaments which bedeck the early sculptured figures and those depicted in the paintings at the Cave Temples of Ajanta are precisely the same in design and use as similar articles made at the present time, thus affording a striking evidence of the inherent conservatism of the Hindu people and its effect upon an industrial art that makes a closer personal appeal than any other.

Textiles—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries east and west of India have produced work equal if not superior, in stone wood and metal but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum blossom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But for beauty of surface and variety of texture no machine-made fabrics have ever equalled

the finest handwork of the ancient weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom and it is to be feared that under modern conditions they are never likely to be revived. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. In embroidery and fine needlework the West and the Far East have more than held their own, while nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs. This art was introduced from Persia but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or design.

Modern Conditions.—In the foregoing sketch of the ancient industrial art of India, as applied to the four principal materials employed only a general indication of its more striking characteristics has been possible. A volume would be required to give a detailed description of any one of them, and would leave many other minor arts to be considered. All these branches of art came into existence were developed and flourished in India when social and economic conditions were vastly different from those of the present day. Like similar artistic crafts carried on in Europe up to the end of the eighteenth century they were executed by hand labour. The processes involved had not been discovered by scientific inquiry such as is now understood by the phrase but were the outcome of generations of slowly built up experience. We now come to the effect upon them of the changed conditions which have revolutionised industrial art in Europe during the last century.

The invention of the steam engine and the application of mechanical power and scientific research to industry in Europe mark the dividing line between ancient and modern industrial art. Not only on its technical side is this so, but the effect of these changes has been to alter the character of the work itself and the spirit which animated the craftsmen. In place of the ancient ideal of variety in design and treatment which meant a limited output, the modern one of uniformity and unlimited output has been substituted. The capitalist has displaced the master craftsman the organised factory the small workshop specialisation and division of labour have taken the place of general proficiency among the artisans the function of the designer has been separated from that of the craftsman local markets have been extended to serve the whole world and the skilled handicraftsman has in a great measure become a machine minder. It took about one hundred years of gradual change for the craftsmen of Europe fully to adjust themselves to these altered conditions and during the greater portion of that period India protected by the difficulties of transport continued its immemorial practices. Fifty years ago this protective barrier was removed by the

opening of the Suez Canal, and the handicraftsmen of India have since been struggling to avoid the same fate which overtook those of Europe half a century before. With less time to adapt themselves to the changed conditions the Indian craftsmen have had to meet the competition of European rivals already fully equipped with new and unknown weapons. Even before this period of intense competition, observers interested in Indian craftwork had noticed evidences of its deterioration. The falling off, both in design and workmanship was attributed to the conservative practices of the craftsmen to the gradual loss of foreign markets and to the long period of internal disorder which had deprived them of both the patronage of the rulers of an earlier age and the stimulating contact with foreign craftsmen who had previously been attracted to the splendid courts at Delhi and Agra. During the same period an even greater degradation in design had overtaken the craftwork of Europe. This was due to entirely different causes namely to the introduction of machinery. Attention had been so concentrated upon speedy production mechanical accuracy and commercial organisation that beauty of design had been almost entirely neglected. This was so forcibly demonstrated at the International Exhibition of 1851 that efforts were at once made to bring art and industry together once more. Schools of Art and Museums were founded throughout England and the same system was copied in a tentative and timid fashion in India. The function of these institutions was accurately estimated in England where the artistic industries were already highly organised and were commercially successful and whose products were to be found in every market of the world. Their business was to assist these industries by training a body of efficient designers capable of furnishing the factories with suitable designs new or old and in any style, to satisfy the requirements of customers in any country. It was never supposed for an instant that a School of Art could lead an industry in India their function was as completely misunderstood as were the causes of the depression in Indian craftwork. The schools were not only expected to lead the industries which were living but to revive those which were dead. In the report of the Indian Industrial Commission the need for some State-aided system of industrial and commercial organisation of the industrial arts with an expanded scheme of technical and artistic instruction for the craftsmen has been recognised and valuable suggestions were made by experts who gave their evidence when the Commission visited the different Provinces. The success of the scheme recommended by the Commission will depend entirely upon the energy with which it is applied, and the practical knowledge and the assistance required by each of the different crafts on the part of those who control it. If in addition the same financial assistance and encouragement are given by the Imperial and Local Governments to the Indian craftsmen that have been bestowed by their own Government upon the art workers of Japan, industrial art in India will quickly emerge from the cloud of depression which has hung over it for a century past, into the sunlight of prosperity.

Archæology.

The ancient monuments of India are as varied as they are numerous. Until a few years ago the earliest known were the brick and stone evidences of the Maurya period—a group of mounds at Lauriya Nandangarh illustrative of the Vedic funeral customs and assignable roughly to the 7th or 8th century B.C. and some rough stone walls at the ancient city of Rajagriha of about the same period. The absence of structures of an earlier period was then supposed to be due to the fact that all previous architecture has been of wood and had completely perished. The recent excavations however at Mohenjodaro in Sind and at Harappa in the Punjab have completely revolutionised ideas on this subject and proved that as far back as the 3rd or 4th millennium B.C. and probably much earlier still India was in possession of a highly developed civilisation with large and populous cities well built houses, temples and public buildings of brick and many other amenities enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjodaro and Harappa there are the remains of some 3 or 4 cities superimposed one upon the ruins of another.

The structures that have so far been exposed at Mohenjodaro belong to the three latest cities on the site. Those of the third or earliest are the best in style, those of the first the poorest. Most of the structures are dwelling houses or shops but there are others which appear to have been temples and one of particularly massive proportions—is a large bath surrounded by fenestrated galleries and halls. All were built of well burnt brick and most of them were of two or more storeys with staircases giving access to the upper rooms. In and around the ruins have been found many minor antiquities including gold and silver jewellery, engraved seals of stone and ivory and paste, copper implements and vessels, terracotta figurines and toys, shell ornaments and potteries both painted and plain.

These discoveries establish the existence in Sind and the Punjab during the 4th and 3rd millennia B.C. of a highly developed civilisation and the presence in many of the houses of wells and bathrooms as well as an elaborate drainage system betoken a social condition of the cities as a least equal to that found in Sumer and superior to that prevailing in contemporary Babylon and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and it is a point of interest that the specimens of wheat found at Mohenjodaro resemble the common variety grown in the Punjab to day. Besides bread their food appears to have included beef, mutton and pork, the flesh of geese, turtles and charial, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped Indian bull, the buffalo, a short horned bull, the sheep, pig, dog, horse and elephant. Besides gold and silver they used copper, tin, bronze and lead; they were familiar with the arts of spinning and weaving and with the cultivation of cotton had attained a high degree

of proficiency in the jewellery and pottery arts.

That they possessed a well developed system of writing is evidenced by the discovery of over a thousand tablets engraved with well executed animal devices and pictographic legends in an unknown script. The usual method of disposal of the dead appears to have been to cremate the body and then to bury a part of the burnt bones in large earthen jars or in small brick structures resembling the modern Hindu *samadhis*. Of the long period of more than 2000 years that separates the pre-historic monuments referred to above from the historic period of India, little or nothing is yet known but there is every hope that this gap in our knowledge may be filled in by further excavations. From the time of the Mauryas to the 3rd century B.C. the history of architecture and the formative arts of India is clear and can be traced with relative precision.

Monumental Pillars.—The monuments which have come down to us from the Maurya period include besides the caves to be referred to below the wooden palaces (4th century B.C.) which surrounded the ancient city of Pataliputra (modern Patna) and of which a large section has been exposed the rock and pillar edicts of Asoka (3rd or 2nd B.C.), the remains of a large pillared hall constructed by the same emperor at Lalitpur, a number of brick stupas and a monolithic tall which originally surmounted an Asoka stupa at Sarnath near Benares. Altogether twenty pillars of Asoka are known. Few of them bear his inscriptions. Of these the Lauriya Nandangarh column in the Champaran District, 110 feet in height is practically uninjured. The capital of each column, like the shaft was monolithic and comprised three members viz. a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that exhibited at Sarnath near Benares. The four lions standing back to back on the abacus are carved with extraordinary precision and accuracy and originally supported a wheel revolving on the law of piety preached by the Buddha. Several pieces of this wheel were found and a new piece is in the Archaeological Museum at Sarnath. Of the post-Asokan period one pillar (B.C. 150) stands to the north east of Benares in the Gwalior State another in front of the cave of Karli (A.D. 70) and a third at Erau in Central Province belonging to the 5th Century A.D. All these are of stone but there is one of iron also. It is near the Qutb Minar at Delhi and an inscription on it speaks of its having been erected by a king called Chandragupta identified with Chandragupta II (A.D. 375-415) of the Gupta dynasty. It is wonderful to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now. Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly

legant example faces a Jaina temple at Muda bidri, not far from Mangalore.

Topes.—*Stupas*, known as *dagabas* in Ceylon and commonly called *Topes* in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jaines built *stupas* as specimens of Jaina *stupas* is now extinct. A notable structure of this kind which existed until recent times was the Jaina *stupa* which stood on the Kankali Tila site at Muttra and yielded a large number of Jaina sculptures now deposited in the Provincial Museum at Lucknow. Of those belonging to the Buddhists, the great *Topo* of Sanchi in Bhopal is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circumambulation and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character and are carved inside and out, with elaborate sculpture. The original *stupa*, which was of brick and not more than half the present dimensions was apparently erected by Asoka at the same time as his lion crowned pillar near the south gate, but as Sir John Marshall's recent explorations have conclusively shown its outer casing of stone, the railing and the gateways were at least 150 and 200 years later respectively. Other famous Buddhist *stupas* that have been found are those of Sarnath, Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The *stupa* proper at Bharhut has entirely disappeared having been utilised for building villages and what remained of the rail has been removed to the Calcutta Museum. The bas reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatakas* or Birth Stories of the Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr. W. C. Peppe in 1893, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription according to many scholars speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas. If this interpretation is correct we have here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves.—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja, Bedse, Karli, Kanheri, Junnar and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar and Nagarjuni 16 miles north of Gaya and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, viz. the Buddhists, Hindus and Jainas. The earliest caves so far discovered are those of Barabar and Nagarjuni which were excavated by Asoka and his grand

son Dasaratha, and dedicated to Ajivikas, a naked sect founded by Mallikharitputra Gosala. The next earliest caves are those of Bhaja, Phalkhore and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Ferguson and Dr. Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaitya* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the later *viharas* there was a *sanctum* in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu cave temples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Shiva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kailasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Shiva and was excavated by the Rashtrakuta king, Krishna I. (A. D. 783), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandagiri and Udayagiri, those of the medieval type, the Indra Sabha at Ellora and those of the latest period, at Ankal in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-550 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1856. The lost ones were again copied by John Griffiths of the Arts School, Bombay half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1909-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society.

Gandhara Monuments.—On the north west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, friezes of nude *Scythes* bearing a long garland, winged *Atlantes* without number, and a host of individual motifs clearly establish the influence of Hellenistic art. The mound at Peshawar locally known as Shah-Ji-Kot-Dheri, which was explored in 1904, brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the *stupa* raised over the bones of Buddha by the Indo-Scy-

than king Kanishka. They were presented by Lord Minto a Government to the Buddhists of Burma and are now enshrined at Mandalay. To about the same age belong the stupas at Manikyala in the Punjab opened by Ranjit Singh's French Generale, Ventura and Court in 1830. Some of them contained coins of Kanishka.

Structural Temples.—Of this class the earliest examples are the Varna temple at Deogarh, District Jhansi, another temple at Sanchi, the brick temples at Bhitargan in the district of Cawnpore all of which belong to the Gupta period and a later one at Tigowa in the Central Provinces. In South India we have two more examples, viz. Lad Khan and Durga temples at Athole in Bijapur the latter of which cannot be later than the eighth century A.D. The only common characteristic is flat roofs without spires of any kind. In other respects they are entirely different and already here we mark the beginning of the two styles Indo-Aryan and Dravidian whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style the most prominent ones tend to the perpendicular and in the Dravidian to the horizontal. The salient feature of the former again is the curvilinear steeple and of the latter the pyramidal tower. The most notable examples of the first kind are to be found among the temples of Bhuvaneshwar in Orissa, Khajuraho in Bundelkhand, Odia in Jodhpur and Dilwara on Mount Abu. One of the best known groups in the Dravidian style is that of the Mamallapuram Baths of Seven Pagodas on the seashore to the south of Madras. They are each hewn out of a block of granite and are rather models of temples than really temples. They are the earliest examples of typical Dravidian architecture and belong to the 7th century. To the same age has to be assigned the temple of Kallesanath at Conjeevaram, and to the following century some of the temples at Athole and Patkadol of the Bijapur District, Bombay Presidency, and the monolithic temple of Kallase at Elhara, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple of Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan called Chalukyan by Ferguson. In this style the plan becomes polygonal and star-shaped instead of quadrangular and the high-storied spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist at Dambal, Ratihalli, Tiliwalli and Hangal in Dharwar Bombay Presidency, and at Ittagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Halebidu, Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found in two distinct kinds of alphabet, known as Brahmi and Kharoshthi. The Brahmi was read from left to right, and from it have been

evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of an ancient Achaemenian alphabet introduced into the Punjab during the period of the Persian Domination in the 5th century B.C. It was prevalent up to the 4th century A.D., and was supplanted by the Brahmi. The earliest datable inscriptions are the celebrated edicts of Asoka to which a reference has been made above. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbargarhi 40 miles north-east of Peshawar to Nigilva in the Nepal Tassal, from Gilmar in Kathiawar to Dhauli in Orissa, from Kaldi in the Lower Himalayas to Siddapur in Mysore, showing by the way the vast extent of territory held by him. The references in his Rock Edicts to the five contemporary Greek Princes, Antiochus II of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 269 as the date of his coronation. His Rumamdeli pillar inscription, again, discovered in Nepal Tassal now settles, beyond all doubt, the birth place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Bannagar pillar. The pillar had been known for a long time but Sir John Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar in honour of the god Vasudeva by one Heliodorus son of Dion, who is described as an envoy of King Antialcidas of Taxila. Heliodorus is here called a *Bhagavata* which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Nasik. The donor of this cave Ushavadata who calls himself a Saka and was thus an Indo-Scythian is therein spoken of as having granted three hundred thousand kine and sixteen villages to gods and Brahmins and as having annually fed one hundred Brahmins and Brahmins. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are lost and blind.

Saracenic Architecture.—This begins in India with the 13th century after the permanent occupation of the Muhammadans. Their first mosques were constructed of the materials of Hindu and Jaina temples, and sometimes with comparatively slight alterations. The mosque called *Adhai-din-ka-jhonpra* at Ajmer and that near the Qutb Minar are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Alauddin and Ala-ud-din Khilji are typical examples. Of the Sherqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprang up, and we have here the Jami Masjid, Humayun's tomb, Jahaz Mahal and Hindola Mahal as the most notable instances of the secular and

eccelesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shah the Elakhi mosque Kadam Rasul Masjid, and so forth. The Bahmanid dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty three small domes. Of the various forms which the Saracenic architecture assumed says Ferguson that of Ahmedabad may probably be considered to be the most elegant. It is notable for its carved stone work and the work of the perforated stone windows in Bid Bayyid's mosque, the carved niches of the minarets of many other mosques the sculptured Mihrabs and domed and panelled roofs is so exquisite that it will rival anything of the sort executed anywhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jamī Masjid Gagan Mahal, Mihtar Mahal, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors the Pathans of Delhi the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad ud daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail. And it was during his reign that the most splendid of the Moghul tombs the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal was constructed. The Moti Masjid in Agra Fort is another surprisingly pure and elegant monument of his time."

Archaeological Department.—As the archaeological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archaeological Department. The work of this Department is primarily two-fold conservation, and research and exploration. None but sporadic efforts appear to have been made by Government in these directions till 1876 when they established the Archaeological Survey of India and entrusted it to General (afterwards

Sir) Alexander Cunningham, who was also the first Director-General of Archaeology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the diligent efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition and sanctioned a sum of £4 lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator Major Cole who did useful work for three years. Then a reaction set in and his post and that of the Director General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established the seven Archaeological Circles that now obtain placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of Imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall Kt., C.I.E. Director General of Archaeology a comprehensive and systematic campaign of repair and excavation has been prosecuted and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila, Pataliputra, Sanchi in the Bhopal State, Barnath near Benares and in the Indus Valley at Harappa in the Punjab and Mohenjo Daro in Sind. Of all these works those of most general interest are the Mohenjo Daro excavations for here the Archaeological Department have unearthed remains of pre-historic cities dating back to 3000 B.C. and further. The Finance Department of the Government of India invited the Legislative Assembly in March 1925 to allocate half a crore of rupees from a non-recurring surplus to form an endowment fund for excavation so that there should be a regular income of two and a half lakhs of rupees for the purpose. Strong Brahmin opposition was advanced against the proposal and it fell through but other measures have been taken to ensure that the researches in the Indus Valley shall be pursued in the best possible manner on the revenue grants available. The Secretary of State recently sanctioned the appointment of an eminent Orientalist and explorer to take charge of the Mohenjo Daro excavations. He arrived in India in November 1925.

Indian Time

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways and each great centre of population kept its own local time which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904 and addressed to the Local Governments and through them to all local bodies a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below.

In India we have already a standard time which is very generally though by no means universally recognised. It is the Madras local time which is kept on all railway and telegraph lines throughout India and which is 6h 21m 10s in advance of Greenwich. Similarly Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h 24m 47s ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

The Government of India have several times been addressed by scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories writes—The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements but that for international scientific purposes the hourly zone system making the time 5 hours in advance of Greenwich in the west and 6 hours in advance in the east of India would be preferable.

“Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not and as she is as much isolated by uncivilised states as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India and so as to bisect all the main lines of communication and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways and the substitution for it of a double standard would appear to be a retrograde step while it would in all probability be strongly opposed by the railway

authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike and it is certain that the double standard would puzzle the latter greatly while by emphasising the fact that railway differed from local time it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is that under the former, the difference between local and standard time can never exceed half an hour, whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

It is proposed therefore to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich which would be known as Indian Standard Time and the difference between standard and local time at the places mentioned below would be approximately as follows: the figures representing minutes and F and S meaning that the standard time is in advance of or behind local time respectively.—Dibrugarh 61 S, Shillong 38 S, Calcutta 24 S, Allahabad 2 F, Madras 9 F, Lahore 33 F, Bombay 39 F, Peshawar 44 F, Karachi 62 F, Quetta 62 F.

This standard time would be as much as 44 and 50 minutes behind local time at Mandalay and Rangoon respectively and since the railway system of Burma is not connected with that of India, and already keeps a time of its own namely Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed however, that in stead of using Rangoon Standard Time as at present which is 6h. 24m. 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs which would be one hour in advance of Indian Standard Time or 6½ hours ahead of Greenwich time and would correspond with 97° 30' E longitude. The change would bring Burma time into simple relation both with European and with Indian time and would (among other things) simplify telegraphic communication with other countries.

“Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case.”

It is difficult to recall without a sense of bewilderment, the reception of this proposal by various local bodies. To read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human

error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution by which the Municipal clocks

were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time. In Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

TIDAL CONSTANTS

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the correction given as below —

	H	M		H	M
Gibraltar	sub	0 32	Rangoon River Entrance	add	1 35
Malta	add	1 34	Penang	sub	1 30
Karachi	sub	2 33	Singapore		3 25
Bombay	"	1 44	Hongkong	"	4 27
Goa	"	2 44	Shanghai	"	0 34
Point de Galle	add	0 12	Yokohama	add	3 8
Madras	sub	5 0	Valparaiso	sub	4 40
Calcutta	"	0 19	Buenos Ayres	add	4 9
Rangoon Town	add	2 41	Monte Video	"	0 33

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a conversion into sterling. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s. or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs. 1,000=£100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mint to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1. From 1899 onwards the value of the rupee was maintained with insignificant fluctuations at the proposed rate of 1s. 4d. until February 1920 when the recommendation of the Committee appointed in the previous year that the rupee should be linked with gold and not with sterling at 2s. instead of 1s. 4d. was adopted. This was followed by great fluctuations. (See article on Currency System)

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A lakh is one hundred thousand (written out as 1,00,000) and a crore is one hundred lakhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs. 1,00,000) may be read as the equivalent of £10,000 before 1873 and as the equivalent of (about) £6,667 after 1899 while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £66,667 after 1899. With the rupee at 1s. 4d. a lakh is equivalent to £7,500 and a crore is equivalent to £75,000.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Indians and Europeans. The anna was formerly reckoned as 1/16. It may now be considered as exactly corresponding to 1/16. The anna is again sub-divided into 12 pies.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units. The scale used generally throughout Northern India, and less commonly in Madras and

Bombay may be thus expressed on a maund—40 seers, one seer=16 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2,057 lb., and the maund 82 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England, especially at small shops where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb. and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 5 lb. for 2s. 2 seers per rupee=(about) 6 lb. for 2s. and so on.

The name of the unit for square measure in India generally is the bigha, which varies greatly in different parts of the country. But acres have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organized basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hoghead of wine contains 63 gallons and a hoghead of beer only 54 gallons that a bushel of corn weighs 48 lbs in Sunderland and 240 lbs in Cornwall, that the English stone weight represents 14 lbs in popular estimation but only 6 lbs., if we are weighing glass, and eight for meat, but 6 lbs. for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone the maund of sugar weighs 48 seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 56 in Monradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjahanpur, 51 in Gondaungur. The maund

varies throughout all India from the Bengal or railway standard of 82·27 lbs. to the Factory standard of 74 lbs. 10 oz. 11 drs., the Bombay standard of 28 lbs., which apparently answers to the Forest Department standard in use at the Fuel Depot, and the Madras standard which some authorities estimate at 25 lbs. and others at 24 lbs. and so on.

Committees of Inquiry—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measure in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains) seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful lead which would gradually be followed by trade throughout the empire but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a lead supplied by local legislation based on practical experience. The want of coherence *encreux faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khairabad District of the Presidency where the District Officer Mr. Stacey gradually during the course of three years induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October 1913

when the following committee was appointed to inquire into the entire subject anew —

Mr C. A. Silbertard (*President*)

Mr A. Y. G. Campbell.

Mr Burtonji Fardoomji.

This Committee reported in August 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says — Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur Bareilly and neighbouring areas) practically the whole of Madras parts of the Punjab (rural portions of Amritsar and neighbouring districts) of Bombay (South Bombay Bombay city and Gujarat) and the North West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are —

FOR INDIA

8 kinaskias	= 1 chawal
8 chawals	= 1 ratti
8 rattis	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
18 chataks	= 1 seer
40 seers	= 1 maund

FOR BURMA

2 small ywes	= 1 large ywe
4 large ywes	= 1 pe
2 pes	= 1 mu
5 pes or ¼ mus	= 1 gamat
1 mat	= 1 ngamun
1 ngamun	= 1 tikai
100 tikais	= 1 peiktha or vira

The tola is the tola of 180 grains equal to the rupee weight. The vira has recently been fixed at 9 80 lbs. or 140 tolas.

Government Action.—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action but they passed more detailed orders in January 1922. In these they again for the present and subject to the restrictions imposed by the Government of India Act and the dissolution rules left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly they announced their decision not to adopt all India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading 'Weights' near the commencement of this article this having been recommended by a majority of the Weights and Measures Committee and having received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation or standardisation and stated that if subsequently opinion developed strongly in favour of the Imperial standardisation of weights the Government of India will be prepared to under take such legislation but at present they consider that any such step would be premature.

The History of India in Outline

51

No history of India can be proportionate and the briefest summary must suffer from the same defect. Even a wholesale acceptance as history of mythology tradition and folklore will not make good though it makes picturesque the many gaps that exist in the early history of India and though the labours of modern geographers and archaeologists have been amazingly fruitful it cannot be expected that these gaps will ever be filled to any appreciable extent. Approximate accuracy in chronology and an outline of dynamic facts are all that the student can look for up to the time of Alexander, though the briefest excursion into the by ways of history will reveal to him many alluring and mysterious fluids for speculation. There are for example to this day castles that believe they sprang originally from the loins of a being who landed from an impossible boat on the shores of a highly improbable sea and the great epic poems contain plentiful statements equally difficult of reconciliation with modern notions of history as a science. But from the Jataka stories and the Puranas, much valuable information is to be obtained and for the benefit of those unable to go to these and other original sources, it has been distilled by a number of writers.

The orthodox Hindu begins the political history of India more than 3 000 years before Christ with the war waged on the banks of the Jumna between the sons of Kuru and the sons of Pandu. Recent excavations by the Archaeological Department in the Indus valley at Harappa in the Punjab but more particularly at Mohenjo Daro in Sind carry us back even further. They have uncovered sites of cities bearing the marks and containing the relics of a high civilisation started by the Department to be Sumerian. The excavations are proceeding under special direction and have excited the greatest interest in scientific circles throughout the world but the general conclusion is several of these remote centuries and takes 600 B.C. or thereabouts as his starting point. At that time much of the country was covered with forest but the Aryan races who had entered India from the north had established in parts a form of civilisation far superior to that of the aboriginal savages and to this day there survive cities like Benares founded by those invaders. In like manner the Dravidian invaders from an unknown land who overran the Deccan and the Southern parts of the Peninsula, crushed the aboriginals and at a much later period were themselves subdued by the Aryans. Of these two civilizing forces the Aryan is the better known and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar on the Ganges. It was in or near this powerful kingdom that Jainism and Buddhism had their origin, and the fifth King of Magadha, Bimbisara by name, was the friend and patron of Gautama Buddha. The King mentioned was a contemporary of Darius autocrat of Persia (521 to 485 B.C.) who annexed the Indus valley and formed from his conquest an Indian satrapy which paid as tribute the equivalent of about one million sterling. Detailed history however does not become possible until the invasion of Alexander in 326 B.C.

Alexander the Great

That great soldier had crossed the Hindu Kush in the previous year and had captured Aornos

on the Upper Indus. In the spring of 326 he crossed the river at Ohind, received the submission of the King of Taxila, and marched against Porus who ruled the fertile country between the rivers Hydaspes (Jhelum) and Acesines (Chenab). The Macedonian carried all before him, defeating Porus at the battle of the Hydaspes and crossing the Chenab and Ravi. But at the River Hyphasis (Bias) his weary troops mutinied and Alexander was forced to turn back and retire to the Jhelum where a fleet to sail down the river to the sea was nearly ready. The wonderful story of Alexander's march through Western and Persia to Babylon and of the voyage of Nearchus up the Persian Gulf is the climax to the narrative of the invasion but is not part of the history of India. Alexander had stayed nineteen months in India and left behind him officers to carry on the Government of the kingdoms he had conquered but his death at Babylon in 323 destroyed the fruits of what has to be regarded as nothing but a brilliant raid and within two years his successors were obliged to leave the Indian provinces heavily scarred by war but not hellenized.

The leader of the revolt against Alexander's general was a young Hindu Chandragupta, who was an illegitimate member of the Royal Family of Magadha. He dethroned the ruler of that kingdom, and became so powerful that he is said to have been able to place 60,000 troops in the field against Seleucus to whom Babylon had passed on the death of Alexander. This was too formidable an opposition to be faced and a treaty of peace was concluded between the Syrian and Indian monarchs which left the latter the great mountain Sovereign of India (321—273 B.C.) with his capital at Pataliputra, the modern Patna and Banipur. Of Chandragupta's court and administration a very full account is preserved in the fragments that remain of the history compiled by Megasthenes the ambassador sent to India by Seleucus. His memorable reign ended in 273 B.C. when he was succeeded by his son Bindusara who in his turn was succeeded by Asoka (273—231 B.C.) who recorded the events of his reign in numerous inscriptions. This king in an unusually bloody war, added to his dominions the Kingdom of Kalinga (the Northern Circars) and then becoming a convert to Buddhism, resolved for the future to abstain from conquest by force of arms. The consequences of the conversion of Asoka were amazing. He was not intolerant of other religions, and did not endeavour to force his creed on his children. But he initiated measures for the propagation of his doctrine with the result that Buddhism which had hitherto been a merely local sect in the valley of the Ganges, was transformed into one of the greatest religions of the world—the greatest, probably it measured by the number of adherents. This is Asoka's claim to be remembered. This is which makes his reign an epoch not only in the history of India, but in that of the world. The wording of his edicts reveal him as a great king as well as a great missionary and it is to be hoped that the excavations now being carried on in the ruins of his palace may throw yet more light on his character and times. On his death the Maurya kingdom fell to pieces. Even during his

raja there had been signs of new forces at work on the borderland of India, where the independent kingdoms of Bactria and Parthia had been formed, and subsequent to it there were frequent Greek raids into India. The Greeks in Bactria, however, could not withstand the overwhelming force of the westward migration of the Yueh-chi horde which in the first century A.D. also ousted the Indo-Parthian kings from Afghanistan and North Western India.

The first of these Yueh-chi kings to annex a part of India was Kadphises II (A.D. 85-125) who had been defeated in a war with China but crossed the Indus and consolidated his power eastward as far as Benares. His son Kanishka (whose date is much disputed) left a name which to Buddhists stands second only to that of Asoka. He greatly extended the boundaries of his empire in the North and made Peshawar his capital. Under him the power of the Kushan clan of the Yueh-chi reached its zenith and did not begin to decay until the end of the second century concurrently with the rise in middle India of the Andhra dynasty which constructed the Amaravati stupa, 'one of the most elaborate and precious monuments of piety ever raised by man.'

The Gupta Dynasty

Early in the fourth century there arose, at Pataliputra, the Gupta dynasty which proved of great importance. Its founder was a local chief, his son Samudragupta who ruled for some fifty years from A.D. 325, was a king of the greatest distinction. His aim of subduing all India was not indeed fulfilled but he was able to exact tribute from the kingdoms of the South and even from Ceylon and in addition to being a warrior, he was a patron of the arts and of Sanskrit literature. The rule of his son, Chandragupta, was equally distinguished and is commemorated in an inscription on the famous iron pillar near Delhi, as well as in the writings of the Chinese pilgrim Fa Hien who pays a great tribute to the equitable administration of the country. It was not until the middle of the fifth century that the fortunes of the Gupta dynasty began to wane—in face of the onset of the White Huns from Central Asia—and by 480 the dynasty had disappeared. The following century all over India was one of great confusion, apparently marked only by the rise and fall of petty kingdoms, until a monarch arose in A.D. 466 capable of consolidating an Empire. This was the Emperor Harsha who from Thanesar near Ambala conquered Northern India and extended his territory South to the Nerbudda. Imbuing Asoka in many ways, this Emperor yet "let no embarrassment in paying adoration as turns to Shiva the Sun, and Buddha at a great public ceremony! Of his times a graphic picture has been handed down in the work of a Chinese Master of the Law "Hsuen Tsang by name. Harsha was the last native paramount sovereign of Northern India on his death in 646 his throne was usurped by a Minister, whose treacherous conduct towards an embassy from China was quickly avenged and the kingdom so laboriously established lapsed into a state of internecine strife which lasted for a century and a half.

The Andhras and Rajputs.

In the meantime in Southern India the Andhras had attained to great prosperity and

carried on a considerable trade with Greece, Egypt and Rome, as well as with the East. Their domination ended in the fifth century A.D. and a number of new dynasties, of which the Pallavas were the most important, began to appear. The Pallavas made way in turn for the Chalukyas, who for two centuries remained the most important Deccan dynasty, one branch uniting with the Cholas. But the fortunes of the Southern dynasties are so involved and in many cases so little known, that to recount them briefly is impossible. Few names of note stand out from the record except those of Vikramaditya (11th century) and a few of the later Hindu rulers who made a stand against the growing power of Islam, of the rise of which an account is given below. In fact the history of medieval India is singularly devoid of unity. Northern India was in a state of chaos from about 650 to 950 A.D. not unlike that which prevailed in Europe of that time and materials for the history of these centuries are very scanty. In the absence of any powerful rulers the jungle began to gain back what had been wrested from it; ancient capitals fell into ruins from which in some cases they have not even yet been disturbed, and the aboriginals and various foreign tribes began to assert themselves so successfully that the Arvan element was chiefly confined to the Doab and the Eastern Punjab. It is not therefore so much for the political as for the religious and social history of this anarchical period that one must look. And the greatest event—if a slow process may be called an event—of the middle ages was the transition from tribe to caste, the final disappearance of the old four fold division of Brahmins, Kshatriyas, Vaishyas, and Sudras and the formation of the new division of pure and impure largely resting upon a classification of occupations. But this social change was only a part of the development of the Hindu religion into a form which would include in its embrace the many barbarians and foreigners in the country who were outside it. The great political event of the period was the rise of the Rajputs as warriors in the place of the Kshatriyas. Their origin is obscure but they appeared in the 8th century and spread from their two original homes in Rajputana and Oudh into the Punjab, Kashmir, and the Central Himalayas assimilating a number of fighting clans and binding them together with common code. At this time Kashmir was a small kingdom which exercised an influence on India wholly disproportionate to its size. The only other kingdom of importance was that of Kanauj—in the Doab and Southern Oudh—which still retained some of the power to which it had reached in the days of Harsha, and of which the renown extended to China and Arabia.

With the end of the period of anarchy the political history of India centres round the Rajputs. One clan founded the kingdom of Gujarat, another held Malwa another (the Chauhans) founded a kingdom of which Ajmer was the capital, and so on. Kanauj fell into the hands of the Rathores (circa 1040 A.D.) and the dynasty then founded by that branch of the Gaharwars of Benares became one of the most famous in India. Later in the same century the Chauhans were united; and by

1163 one of them could boast that he had conquered all the country from the Vindhya to the Himalayas, including Delhi already a fortress a hundred years old. The son of this conqueror was Prithwi Raj the champion of the Hindus against the Mahomedans. With his death in battle (1192) ends the golden age of the new civilisation that had been evolved out of chaos and of the greatness of that age there is a splendid memorial in the temples and forts of the Rajput states and in the two great philosophical systems of Sankaracharya (ninth century) and Ramanuja (twelfth century). The triumph of Hinduism had been achieved, it must be added, at the expense of Buddhism, which survived only in Magadha at the time of the Mahomedan conquest and speedily disappeared there before the new faith.

Mahomedan India

The wave of Mahomedan invaders that eventually swept over the country first touched India, in and less than a hundred years after the death of the Prophet in 632. But the first real contact was in the tenth century when a Turkish slave of a Persian ruler founded a kingdom at Ghazni, between Kabul and Kandahar. A descendant of his Mahmud (977-1030) made repeated raids into the heart of India, capturing places so far apart as Multan, Kanauj, Gwalior and Somnath in Kathiawar but permanently occupying only a part of the Punjab. Enduring Mahomedan rule was not established until the end of the twelfth century by which time from the little territory of Ghor there had arisen one Mahomed Ghori capable of carving out a kingdom stretching from Peshawar to the Bay of Bengal. Prithwi Raj the Chauhan ruler of Delhi and Ajmer, made a brave stand against and once defeated, one of the armies of this ruler but was himself defeated in the following year. Mahomed Ghori was murdered at Lahore (1206) and his vast kingdom, which had been governed by satraps, was split up into what were practically independent sovereignties. Of these satraps, Qutb-ud-din the slave ruler of Delhi and Lahore, was the most famous, and is remembered by the great mosque he built near the modern Delhi. Between his rule and that of the Mughals, which began in 1526, only a few of the many kings who governed and fought and built beautiful buildings stand out with distinction. One of these was Ala-ud-din (1296-1316) whose many expeditions to the south much weakened the Hindu Kings, and who proved himself to be a capable administrator. Another was Firoz Shah of the house of Tughlaq whose administration was in many respects admirable, but which ended, on his abdication in confusion. In the reign of his successor, Mahmud (1358-1413), the kingdom of Delhi went to pieces and India was for seven months at the mercy of the Turkish conqueror Timur. It was the end of the fifteenth century before the kingdom, under Sikandar Lodhi, began to recover. His son Ibrahim, still further extended the kingdom that had been recreated, but was defeated by Babar, King of Kabul, at Panipat, near Delhi, in 1556, and there was then established in India the Mughal dynasty.

The Mahomedan dynasties that had ruled in capital other than Delhi up to this date

were of comparative unimportance, though some great men appeared among them. In Gujarat, for example, Ahmed Shah, the founder of Ahmedabad, showed himself a good ruler and builder as well as a good soldier though his grandson, Mahmud Shah Begara, was a greater ruler—acquiring fame at sea as well as on land. In the fourth various kings of the Bahmani dynasty made names for themselves especially in the long wars they waged on the new Hindu kingdom that had arisen which had its capital at Vijayanagar. Of importance also was Adil Khan a Turk, who founded (1490) the Bijapur dynasty of Adil Shahis. It was one of his successors who crushed the Vijayanagar dynasty and built the great mosque for which Bijapur is famous.

The Mughal Empire

As one draws near to modern times it becomes impossible to present anything like a coherent and consecutive account of the growth of India as a whole. Detached threads in the story have to be picked up one by one and followed to their ending, and although the sixteenth century saw the first European settlements in India, it will be convenient here to continue the narrative of Mahomedan India almost to the end of the Mughal Empire. How Babar gained Delhi has already been told. His son, Humayun, greatly extended his kingdom, but was eventually defeated (1540) and driven into exile by Sher Khan an Afghan of great capabilities, whose short reign ended in 1545. The Sur dynasty thus founded by Sher Khan lasted another ten years when Humayun having matched Kabul from one of his brothers was strong enough to win back part of his old kingdom. When Humayun died (1556) his eldest son, Akbar was only 13 years old and was confronted by many rivals. Nor was Akbar well served but his career of conquest was almost uninterrupted and by 1594 the whole of India North of the Nerbudda had bowed to his authority and he subsequently entered the Deccan and captured Ahmednagar. This great ruler, who was as remarkable for his religious tolerance as for his military prowess, died in 1605 leaving behind him a record that has been surpassed by few. His son Jehangir, who married the Persian lady Nur Jahan, ruled until 1627 bequeathing to an admiring posterity some notable buildings—the tomb of his father at Sikandra part of the palace of Agra, and the palace and fortress of Lahore. His son Shahjahan was for many years occupied with wars in the Deccan, but found time to make his court of incredible magnificence and to build the most famous and beautiful of all tombs the Taj Mahal as well as the fort, palace and Juma Masjid at Delhi. The quarrels of his sons led to the deposition of Shahjahan by one of them, Aurangzeb, in 1658. This Emperor's rule was one of constant intrigue and fighting in every direction, the most important of his wars being a twenty five years struggle against the Marathas of the Deccan who under the leadership of Shivaji, became a very powerful faction in Indian politics. His bigoted attitude towards Hinduism made Aurangzeb all the more anxious to establish his Empire on a firm base in the south, but he was unable to hold his many conquests, and on his death (1707) the

Empire, for which his three sons were fighting could not be held together. Internal disorder and Maratha encroachments continued during the reigns of his successors and in 1738 a fresh danger appeared in the person of Nader Shah the Persian conqueror who carried all before him. On his withdrawal, leaving Mahomed Shah on the throne, the old intrigues recommenced and the Marathas began to make the most of the opportunity offered to them by puppet rulers at Delhi and by almost universal discord throughout what had been the Moghul Empire. There is little to add to the history of Mahomedan India. Emperors continued to reign in name at Delhi up to the middle of the 18th century, but their territory and power had long since disappeared, being swallowed up either by the Marathas or by the British.

European Settlements.

The voyage of Vasco da Gama to India in 1498 was what turned the thoughts of the Portuguese to the formation of a great Empire in the East. That idea was soon realized for from 1600 onwards constant expeditions were sent to India and the first two Viceroys in India—Almeida and Albuquerque—laid the foundations of a great Empire and of a great trade monopoly. Goa, taken in 1510, became the capital of Portuguese India and remained to this day in the hands of its captors, and the countless ruins of churches and forts on the shores of Western India as also farther East at Malacca, testify to the zeal with which the Portuguese endeavoured to propagate their religion and to the care they took to defend their settlements. There were great soldiers and great missionaries among them—Albuquerque da Cunha, da Castro in the former class, St. Francis Xavier in the latter. But the glory of Empire loses something of its lustre when it has to be paid for and the constant drain of men and money from Portugal necessitated by the attacks made on their possessions in India and Malaya was found almost intolerable. The junction of Portugal with Spain which lasted from 1580 to 1640 also tended to the downfall of the Eastern Empire and when Portugal became independent again it was unequal to the task of competing in the East with the Dutch and English. The Dutch had little difficulty in wresting the greater part of their territory from the Portuguese but the seventeenth century naval wars with England forced them to relax their hold upon the coast of India, and during the French wars between 1795 and 1811 England took all Holland's Eastern possessions, and the Dutch have left in India but few traces of their civilization and of the once powerful East India Company of the Netherlands.

The first English attempts to reach India date from 1498 when Cabot tried to find the North West passage and three attempts were repeated all through the sixteenth century. The first Englishman to land in India is said to have been one Thomas Stephens (1579) who was followed by a number of merchant adventurers, but trade between the two countries really dates from 1600 when Elizabeth incorporated the East India Company which had been formed in London. Factories in India were founded only after Portuguese and Dutch position had been overcome, notably in the

sea fight off Swally (Suvali) in 1612. The first factory at Surat, was for many years the most important English foothold in the East. Its establishment was followed by others including Fort St. George, Madras, (1640) and Hughli (1661). In the history of these early years of British enterprise in India the cession of Bombay (1661) as part of the dowry of Catherine of Braganza stands out as a landmark. It also illustrates the weakness of the Portuguese at that date since in return the King of England undertook to protect the Portuguese in India against their foes—the Marathas and the Dutch. Cromwell, by his treaty of 1654 had already obtained from the Portuguese an acknowledgment of England's right to trade in the East, and that right was now threatened not by the Portuguese but by Shivaji and by the general disorder prevalent in India. Accordingly in 1686 the Company turned its attention to acquiring territorial power, and announced its intention to establish such a policy of civil and military power and create and secure such a large revenue as may be the foundation of a large well grounded sure English dominion in India for all time to come. Not much came of this announcement for some time and no stand could be made in Bengal against the depredations of Aurangzeb. The foundations of Calcutta (1690) could not be laid by Job Charnock until after a humiliating peace had been concluded with that Emperor and owing to the difficulties in which the Company found itself in England there was little chance of any immediate change for the better. The union of the old East India Company with the new one which had been formed in rivalry to it took place in 1708 and for some years peaceful development followed though Bombay was always exposed by sea to attacks from the pirates who had many strongholds within easy reach of that port and on land to attacks from the Marathas. Internal dangers were numerous and still more to be feared. More than one mutiny took place among the troops sent out from England and rebellions like that led by Kelgwin in Bombay threatened to stifle the infant settlements. The public health was bad and the rate of mortality was at times appalling. To cope with such conditions strong men were needed, and the Company was in this respect peculiarly fortunate: the long list of its servants, from Oxenden and Angier to Hastings and Bampfey, contains many names of men who proved themselves good rulers and far-sighted statesmen: the finest Empire builders the world has known.

Attempts to compete with the English were made of course. But the schemes of the Emperor Charles VI to secure a share of the Indian trade were not much more successful than those made by Scotland, Denmark, Sweden and Russia. By the French who founded Pondicherry and Chandernagore towards the end of the 17th century much more was achieved, as will be seen from the following outline of the development of British rule.

The French Wars.

When war broke out between England and France in 1744 the French had acquired a

strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore, and Mysore—and a number of petty states under local chieftains. In the affairs of these States Dupleix, when Governor of Pondicherry, had intervened with success, and when Madras was captured by a French squadron under La Bourdonnais (1746) Dupleix wished to hand it over to the Nawab of Arcot—a deputy of the Nizams who ruled in the Carnatic. The French however kept Madras, repelling an attack by the disappointed Nawab as well as the British attempts to recapture it. The treaty of Aix-la-Chapelle restored Madras to the English. The fighting had shown the Indian powers the value of European troops and this was again shown in the next French war (1750-54) when Clive achieved enduring fame by his capture and subsequent defence of Arcot. This war arose from Dupleix supporting candidates for the disputed successions at Arcot and Hyderabad while the English at Madras put forward their own nominees. One of Dupleix's officers, the Marquis de Bussy, persuaded the Nizam to take into his pay the army which had established his power and in return the Northern Circars between Orissa and Madras was granted to the French. This territory however was captured by the English in the seven years war (1756-63). Dupleix had by then been recalled to France. Lally who had been sent to drive the English out of India captured Fort St David and invaded Madras. But the victory which Colonel (Sir Eyre) Coote won at Wandiwash (1760) and the surrender of Pondicherry and Gingee put an end to the French ambitions of Empire in South India. Pondicherry passed more than once from the one nation to the other before settling down to its present existence as a French colony in miniature.

Battle of Plassey

While the English were fighting the third French war in the South they became involved in grave difficulties in Bengal where Siraj-ud-Daula had acceded to power. The headquarters of the English at Calcutta were threatened by that ruler who demanded they should surrender a refuge and should cease building fortifications. They refused and he marched against them with a large army. Some of the English took to their ships and made off down the river the rest surrendered and were cast into the jail known as the Black Hole. From this small and stifling room 28 persons, out of 146 came out alive the next day. Clive who was at Madras, immediately sailed for Calcutta with Admiral Watson's squadron, re-captured the town (1757) and, as war with the French had been proclaimed, proceeded to take Chandernagore. The Nawab Siraj-ud-Daula then took the side of the French, and Clive putting forward Mir Jafar as candidate for the Nawab's throne marched out with an army consisting of 900 Europeans, 2,000 sepoy and 3 pieces of artillery against the Nawab's host of over 50,000. The result was the historic battle of Plassey (June 23) in which Clive after hesitating on the course to be pursued, routed the Nawab. Mir Jafar was put on the throne

at Murshidabad, and the price of this honour was put at £2,440,000 in addition to the grant to the Company of the land round Calcutta now known as the District of the twenty four Parganas. In the year after Plassey Clive was appointed Governor of Bengal and in that capacity sent troops against the French in Madras and in person led a force against the Oudh army that was threatening Mir Jafar in each case with success. From 1760 to 1765 Clive was in England. During his absence the Council at Calcutta deposed Mir Jafar and, for a price, put Mir Kasim in his place. This ruler moved his capital to Mooghlyr, organised an army and began to intrigue with the Nawab Wazir of Oudh. He soon found in a dispute over customs dues, an opportunity of quarrelling with the English and the first shots fired by his followers were the signal for a general rising in Bengal. About 200 Englishmen and a number of sepoys were massacred, but his trained regiments were defeated at Gharia and Oodeynullah and Mir Kasim sought protection from the Nawab of Oudh. But in 1764 after quelling a sepoymutiny in his own camp by blowing 24 ring leaders from the guns, Major (Sir Hector) Munro defeated the joint forces of Shah Alam, the Mughal Emperor and the Nawab of Oudh in the battle of Buxar. In 1766 Clive (now Baron Clive of Plassey) returned as Governor.

Two landmarks stand out in his policy. First, he sought the substance although not the name of territorial power under the fiction of a grant from the Mughal Emperor. Second he desired to purify the Company's service by prohibiting illicit gains, and by guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But our efforts towards a sound administration date from this second Governorship of Clive as our military supremacy dates from his victory at Plassey. Before Clive left India, in 1767 he had readjusted the divisions of Northern India and had set up a system of Government in Bengal by which the English received the revenues and maintained the army while the criminal jurisdiction was vested in the Nawab. The performance of his second task, the purification of the Company's service, was hotly opposed but carried out. He died in 1774 by his own hand, the House of Commons having in the previous year censured him, though admitting that he did render great and meritorious services to his country.

Warren Hastings.

The dual system of government that Clive had set up proved a failure and Warren Hastings was appointed Governor in 1772 to carry out the reforms settled by the Court of Directors which were to give them the entire care and administration of the revenues. Thus Hastings had to undertake the administrative organization of India and in spite of the factious attitude of Philip Francis with whom he fought a duel and of other members of his Council he reorganized the civil service, reformed the system of revenue collection, greatly improved the financial position of the Company, and created courts of justice and some semblance of a police force. From 1772 to 1774 he was Governor of Bengal.

he was the first Governor-General, nominated under an Act of Parliament passed in the previous year. His financial reforms, and the honest contributions he exacted from the rebellious Chet Singh and the Begam of Oudh, were interpreted in England as acts of oppression and formed, together with his action in the trial of Nuncmar for forgery, the basis of his seven years' trial before the House of Lords which ended in a verdict of not guilty on all the charges. But there is much more for which his administration is justly famous. The recovery of the Marathas from their defeat at Panipat was the cardinal factor that influenced his policy towards the native states. One frontier was closed against Maratha invasions by the loan of a British brigade to the Nawab Wazir of Oudh, for his war against the Rohillas, who were intriguing with the Marathas. In Western India he found himself committed to the two Maratha wars (1775-82) owing to the ambition of the Bombay Government to place its own nominee on the throne of the Peshwa at Poona and the Bengal troops that he sent over made amends, by the conquest of Gujarat and the capture of Gwalior for the disgrace of Wedgwood where the Marathas overpowered a Bombay army. In the South—where interference from Madras had already led (1769) to what is known as the first Mysore war, a disastrous campaign against Hyder Ali and the Nizam—he found the Madras Government again in conflict with these two potentates. The Nizam he won over by diplomacy but against Hyder Ali he had to despatch a Bengal army under Sir Eyre Coote. Hyder Ali died in 1782 and two years later a treaty was made with his son Tipu. It was in those acts of intervention in distant provinces that Hastings showed to best advantage as a great and courageous man cautious, but swift in action when required. He was succeeded, after an interregnum, by Lord Cornwallis (1786-93) who built on the foundations of civil administration laid by Hastings, by entrusting criminal jurisdiction to Europeans and establishing an Appellate Court of Criminal Jurisdiction at Calcutta. In the Civil Service he separated the functions of the District Collector and Judge and organized the "writers" and "merchants" of the Company into an administrative Civil Service. This system was subsequently extended to Madras and Bombay. Lord Cornwallis is better known for his introduction, on orders from England, of the Permanent Settlement in Bengal. (See article on Land Revenue). A third Mysore war was waged during his tenure of office which ended in the submission of Tipu Sultan. Sir John Shore (Lord Teignmouth) an experienced Civil Servant, succeeded Lord Cornwallis, and in 1798, was followed by Lord Wellesley the grand old Pitt, whose projects were to change the map of India.

Lord Wellesley's Policy

The French in general, and "the Corsican" in particular, were the enemy most to be dreaded for a few years before Lord Wellesley took up his duties in India, and he turned the scheme of definitely ending French schemes in Asia by placing himself at the head of a great Indian confederacy. He started by ob-

lating large tracts of territory in lieu of payments; overture as subsidies for British troops, he then won over the Nizam to the British side, and after exposing the intrigues of Tipu Sultan with the French, embarked on the fourth Mysore war which ended (1799) in the fall of Seringapatam and the gallant death of Tipu. Part of Mysore, the Carnatic, and Tanjore roughly constituting the Madras Presidency, of to-day then passed to British rule. The five Maratha powers—the Peshwa of Poona, the Gaekwar of Baroda, Sindhiya of Gwalior, Holkar of Indore and the Raja of Nagpur—had still to be brought into the British net. The Peshwa, after being defeated by Holkar fled to British territory and signed the Treaty of Basen which led to the third Maratha war (1802-04) as it was regarded by Sindhiya and the Raja of Nagpur as a betrayal of Maratha independence. In this the most successful of British campaigns in India, Sir Arthur Wellesley (the Duke of Wellington) and General (Lord) Lake carried all before them, the one by his victories at Assaye and Argaum and the other at Aligarh and Laswari. Later operations such as Colonel Monson's retreat through Central India were less fortunate. The great acquisitions of territory made under Lord Wellesley proved so expensive that the Court of Directors, becoming impatient sent out Lord Cornwallis a second time to make peace at any price. He, however, died soon after his arrival in India, and Sir George Barlow carried on the government (1805-7) until the arrival of a stronger ruler Lord Minto. He managed to keep the peace in India for six years, and to add to British dominions by the conquest of Java and Mauritius. His foreign policy was marked by another new departure inasmuch as he opened relations with the Punjab, Persia, and Afghanistan, and concluded a treaty with Ranjit Singh at Lahore, which made that Sikh ruler the loyal ally of the British for life.

The successor of Lord Minto was Lord Moira, who found himself obliged almost at once to declare war on the Gurkhas of Nepal who had been encroaching on British territory. After initial reverses the English under General Ochterlony were successful and the Treaty of Bagauli (1816) was drawn up which defined British relations with Nepal to the present day. For this success Lord Moira was made Marquis of Hastings. In the same year he made preparations for the last Maratha war (1817-18) which was made necessary by the lawless conduct of the Pindaris, gangs of Pathan or Rohilla origin, whose chief patrons were the rulers of Native States. The large number of 120,000 that he collected for this purpose destroyed the Pindaris, annexed the dominions of the rebellious Peshwa of Poona, protected the Rajput States, made Sindhiya enter upon a new treaty, and compelled Holkar to give up part of his territory. Thus Lord Hastings established the British power more firmly than ever, and when he resigned in 1823, all the Native States outside the Punjab had become parts of the political system and British interests were permanently secured from the Persian Gulf to Singapore. Lord Amherst followed Lord Hastings, and his five years' rule (1828-33) are memorable for the first Burmese war and the capture of Bhamptar. The former opera-

tion was undertaken owing to the inclement demands and raids of the Burmese, and resulted in the Burmese ceding Assam, Arakan and the coast of Manipal and their claims to the lower provinces. The capture of Rangoon by Lord Combermere (1824) wiped out the repulse which General Lake had received there twenty years earlier. A disputed succession on this occasion led to the British intervention.

Social Reform.

A former Governor of Madras, Lord William Bentinck was the next Governor-General. His epitaph by Macaulay says: "He abolished cruel rites, he effaced humiliating distinctions, he gave liberty to the expression of public opinion, his constant study was to elevate the intellectual and moral character of the nations committed to his charge."

Some of his financial reforms, forced on him from England, and his widening of the gates by which educated Indians could enter the service of the Company were most unpopular at the time but were eclipsed by the acts he took for the abolition of *Sati* or widow burning, and the suppression—with the help of Captain Stoddart—of the professional hereditary assassins known as *Thugs*. In 1832 he annexed Oudh, and two years later Coorg. The incompetence of the ruler of Mysore forced him to take that State also under British administration—where it remained until 1861. His rule was marked in other ways by the despatch of the first steamship that made the passage from Bombay to Suez, and by his settlement of the long educational controversy in favour of the advocates of instruction in English and the vernacular. Lord William Bentinck left India (1834) with his programme of reforms unfinished. The new Charter Act of 1833 had brought to a close the commercial business of the Company and emphasised their position as rulers of an Indian Empire in trust for the Crown. By it the whole administration as well as the legislation of the country was placed in the hands of the Governor-General in Council and authority was given to create a Presidency of Agra. Before his retirement Bentinck assumed the statutory title of Governor-General of India (1834), thus marking the progress of consolidation since Warren Hastings in 1774 became the first Governor-General of Fort William. Sir Charles Metcalfe, being senior member of Council, succeeded Lord William Bentinck and during his short tenure of office carried into execution his predecessor's measures for giving entire liberty to the press.

Afghan Wars.

With the appointment of Lord Auckland as Governor-General (1839-42) there began a new era of war and conquest. Before leaving London he announced that he looked with exultation to the prospect of promoting education and knowledge and of extending the blessings of good Government and happiness to millions in India. "but his administration was almost exclusively comprised in a fatal expedition to Afghanistan, which dragged in its train the annexation of Sind, the Sikh wars, and the inclusion of Baluchistan in the protectorate of India. The first Afghan war was undertaken partly to counter the Russian advance

in Central Asia and partly to place on the throne at Kabul the deposed ruler Shah Shuja in place of Dost Mahomed. The latter object was easily attained (1839) and for two years Afghanistan remained in the military occupation of the British. In 1841 Sir Alexander Burnes was assassinated in Kabul and Sir William Macnaghten suffered the same fate in an interview with the son of Dost Mahomed. The British Commander in Kabul, Gen. Niphiastone was old and feeble, and after two months delay he led his army of 4,500 and 12,000 camp followers back towards India in the depth of winter. Between Kabul and Jallalabad the whole force perished, either at the hands of the Afghans or from cold, and Dr. Brydon was the only survivor who reached the latter city. Lord Ellenborough succeeded Lord Auckland and was persuaded to send an army of retribution to relieve Jallalabad. One force under Gen. Pollock relieved Jallalabad and marched on Kabul while Gen. Nott, advancing from Kandahar, captured Ghazni and joined Pollock at Kabul (1842). The bazaar at Kabul was blown up, the prisoners rescued and the army returned to India leaving Dost Mahomed to take undisputed possession of his throne. The drama ended with a bombastic proclamation from Lord Ellenborough and the parade through the Punjab of the (spurious) gates of Somnath taken from the tomb of Mahmud of Ghazni.

Sikh Wars.

Lord Ellenborough's other wars—the conquest of Sind by Sir Charles Napier and the suppression of an outbreak in Gwalior—were followed by his recall, and the appointment of Sir Henry (1st Lord) Hardinge to be Governor-General. A soldier Governor-General was not unacceptable for it was felt that a trial of strength was imminent between the British and the remaining Hindu power in India, the Sikhs. Ranjit Singh, the founder of the Sikh Kingdom had died in 1839 loyal to the end to the treaty he had made with Metcalfe thirty years earlier. He left no son capable of ruling, and the *khalas* or central council of the Sikh army was burning to measure its strength with the British sepoy. The intrigues of two men, Lal Singh and Fej Singh, to obtain the supreme power led to their crowning the British and invading British territory. Sir Hugh Gough, the Commander in Chief, and the Governor-General hurried to the frontier, and within three weeks four pitched battles were fought—at Mirdi, Ferozshah, Aliwal and Sobraso. The Sikhs were driven across the Sutlej and Lahore surrendered to the British, but the province was not annexed. By the terms of peace the infant Duleep Singh was recognized as Rajah, Major Henry Lawrence was appointed Resident, to assist the Sikh Council of Regency, at Lahore, the Jullundur Doab was added to British territory, the Sikh army was limited and a British force was sent to garrison the Punjab on behalf of the child Rajah. Lord Hardinge returned to England (1848) and was succeeded by Lord Dalhousie, the greatest of Indian viceroys.

Dalhousie had only been in India a few months when the second Sikh war broke out. In the attack on the Sikh position at Chillianwala the British lost 2,400 officers and men,

besides four guns and the colours of three regiments but before reinforcements could arrive from England, bringing Sir Charles Napier as Commander-in-Chief. Lord Gough had restored his reputation by the victory of Gujrat which absolutely destroyed the Sikh army as a consequence the Punjab was annexed and became a British province (1849). Its pacification being so well carried out under the two Lawrences that on the outbreak of the Mutiny eight years later it remained not only quiet but loyal. In 1852 Lord Dalhousie had again to embark on war this time in Burma owing to the ill-treatment of British merchants in Rangoon. The lower valley of the Irrawaddy was occupied from Rangoon to Prome and annexed under the name of Pegu to those provinces that had been acquired in the first Burmese war. British territories were enlarged in many other directions during Lord Dalhousie's tenure of office. His doctrine of lapse by which British rule was substituted for Indian States where continued misrule on the failure of a dynasty made this change possible came into practice in the cases of Satara, Jhansi and Nagpur (which last named State became the Central Provinces) where the rulers died without leaving male heirs. Oudh was annexed on account of its misrule. Dalhousie left many other marks on India. He reformed the administration from top to bottom, founded the Public Works Department, initiated the railways, telegraphs and postal system and completed the great Ganges canal. He also detached the Government of Bengal from the charge of the Governor General and summoned representatives of the local Governments to the deliberations of the Government of India. Finally in education he laid down the lines of a department of public instruction and initiated more practical measures than those devised by his predecessors. It was his misfortune that the mutiny which so swiftly followed his resignation was by many critics in England attributed to his passion for change.

The Sepoy Mutiny

Dalhousie was succeeded by Lord Canning in 1856 and in the following year the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion. The causes of this convulsion are difficult to estimate but are probably to be found in the unrest which followed the progress of English civilisation. In the spreading of false rumours that the whole of India was to be subdued. In the confidence the sepoy troops had acquired in themselves under British leadership and in the ambition of the educated classes to take a greater share in the government of the country. Added to this there was in the deposed King of Delhi Bahadur Shah a centre of growing disaffection. Finally there was the story—not devoid of truth—that the cartridges for the new Enfield rifle were greased with fat that rendered them unclean for both Hindus and Mahomedans. And when the mutiny did break out it found the Army without many of its best officers who were employed in civil work and the British troops reduced in spite of Lord Dalhousie's warnings, below the number he considered essential for safety. On May 10

the sepoys at Meerut rose in mutiny, out down a few Europeans, and unopposed by the large European garrison, went off to Delhi where next morning the Mahomedans rose. From that centre the mutiny spread through the North-Western Provinces and Oudh into Lower Bengal. Risings in the Punjab were put down by Sir John Lawrence and his subordinates, who armed the Sikhs and with their help reduced the sepoys, and Lawrence was subsequently able to send a strong body of Sikhs to aid in the siege of Delhi. The native armies of Madras and Bombay remained for the most part true to their colours. In Central India the contingents of some of the great chiefs joined the rebels, but Hyderabad was kept loyal by the influence of its minister Sir Saib Jung.

The interest of the war centre round Delhi, Cawnpore and Lucknow though in other places massacres and fighting occurred. The siege of Delhi began on June 8 when Sir Henry Barnard occupied the Ridge outside the town. Barnard died of cholera early in July and Thomas Reed, who took his place, was obliged through illness to hand over the command to Archdale Wilson. In August Nicholson arrived with a reinforcement from the Punjab. In the meantime the rebel force in Delhi was constantly added to by the arrival of new bodies of mutineers. Attacks were frequent and the losses heavy. Cholera and sunstroke carried off many victims on the Ridge and when the final assault was made in September the Delhi army could only parade 4,720 infantry of whom 1,950 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8 and by the 13th a breach was made. On the following day three columns were led to the assault, a fourth being held in reserve. Over the ruins of the Kashmir Gate blown in by Horns and Salkeld, Col. Campbell led his men and Nicholson formed up his troops within the walls. By nightfall the British with a loss of nearly 1,200 killed and wounded had only secured a foothold in the city. Six days' street fighting followed and Delhi was won, but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner and his two sons were shot by Captain Hudson.

Massacre at Cawnpore.

At Cawnpore the sepoys mutinied on June 27 and found in Nana Sahib the heir of the last Peshwa a willing leader in spite of his former professions of loyalty. There a European force of 240 with six guns had to protect 870 non-combatants, and held out for 22 days, surrendering only on the guarantee of the Nana that they should have a safe conduct as far as Allahabad. They were embarking on the boats on the Ganges when fire was opened on them, the men being shot or hacked to pieces before the eyes of their wives and children and the women being mutilated and murdered in Cawnpore to which place they were taken back. Their bodies were thrown down a well just before Havelock having defeated the Nana's forces arrived to the relief. In Lucknow a small garrison held out in the Residency from July 2 to September 25 against tremendous odds and enduring the most fearful hardships. The relieving force, under Havelock and Outram, was itself invaded and the garrison was

not finally delivered until Sir Colin Campbell arrived in November. Fighting continued for 18 months in Oudh, which Sir Colin Campbell finally reduced and in Central India, where Sir Hugh Rose waged a brilliant campaign against the disinherited Rani of Jhansi—who died at the head of her troops—and Tantia Topi.

Transfer to the Crown

With the end of the mutiny there began a new era in India strikingly marked at the outset by the Act for the Better Government of India (1858) which transferred the entire administration from the Company to the Crown. By that Act India was to be governed by, and in the name of the Sovereign through a Secretary of State assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company numbering about 24,000 officers and men were—greatly resenting the transfer— amalgamated with the Royal service, and the Indian Navy was abolished. On November 1, 1858 the Viceroy announced in Durbar at Allahabad that Queen Victoria had assumed the Government of India, and proclaimed a policy of justice and religious toleration. A principle already enunciated in the Charter Act of 1833 was reinforced and all of every race or creed were to be admitted as far as possible to those offices in the Queen's service for which they might be qualified. The aim of the Government was to be the benefit of all her subjects in India. In their prosperity will be our strength. In their contentment our security and in their gratitude our best reward. Peace was proclaimed in July 1859 and in the cold weather Lord Canning went on tour in the northern provinces to receive the homage of loyal chiefs and to assure them that the policy of lapse was at an end. A number of other important reforms marked the closing years of Canning's Viceroyalty. The India Councils Act (1861) augmented the Governor-General's Council and the Councils of Madras and Bombay by adding non-official members. European and Indian for legislative purposes only. By another Act of the same year High Courts of Judicature were constituted. To deal with the increased debt of India Mr James Wilson was sent from England to be Financial Member of Council and to him are due the customs system, income tax, license duty and State paper currency. The cares of office had broken down the Viceroy's health. Lady Canning died in 1862 and this hastened his departure for England where he died in June of that year. His successor Lord Elgin lived only a few months after his arrival in India and was succeeded by Sir John (afterwards Lord) Lawrence the saviour of the Punjab.

Sir John Lawrence

The chief task that fell to Sir John Lawrence was that of reorganizing the Indian military system, and of reconstructing the Indian army. The latter task was carried out on the principle that in the Bengal army the proportion of Europeans to Indians in the infantry and cavalry should be one to two, and in the Madras and Bombay armies one to three. The artillery was to be almost wholly European. The re-organization was carried out in spite of

financial difficulties and the saddling of Indian revenues with the cost of a war in Abyssinia with which India had no direct concern, but operations in Bhutan were all the drain made on the army in India while the re-organizing process was being carried on. Two severe famines—in Orissa (1866) and Bundelkhand and Upper Hindustan (1868-9)—occurred, while Sir John Lawrence was Viceroy and he laid down the principle for the first time in Indian history that the officers of the Government would be held personally responsible for taking every possible means to avert death by starvation. He also created the Irrigation Department under Col. (Sir Richard) Strachey. Two commercial crises of the time have to be noted. One seriously threatened the tea industry in Bengal. The other was the consequence of the wild gambling in shares of every description that took place in Bombay during the years of prosperity for the Indian cotton industry caused by the American Civil War. The 'Share Mania' however did no permanent harm to the trade of Bombay but was, on the other hand, largely responsible for the series of splendid buildings begun in that city during the Governorship of Sir Bartle Frere. Sir John Lawrence retired in 1869, having passed through every grade of the service from an Assistant Magistracy to the Viceroyalty. Lord Mayo who succeeded him created an Agricultural Department and introduced the system of Provincial Finance thus fostering the impulse to local self-government. He also laid the foundation for the reform of the salt duties thereby enabling his successors to abolish the inter-provincial customs lines. Unhappily his vast schemes for the development of the country by extending communications of every kind were not carried out to the full by him for he was murdered in the convict settlement of the Andaman Islands, in 1872. Lord Northbrook (Viceroy 1872-3) had to exercise his abilities chiefly in the province of finance. A severe famine which threatened Lower Bengal in 1874 was successfully ward off by the organization of State relief and the importation of rice from Burma. The following year was notable for the deposition of the Gaikwar of Baroda from mis-government and for the tour through India of the Prince of Wales (the late King Edward VII). The visit of the Duke of Edinburgh to India when Lord Mayo was Viceroy had given great pleasure to those with whom he had come in touch and had established a kind of personal link between India and the Crown. The Prince of Wales' tour aroused unprecedented enthusiasm for and loyalty to the British Raj and further encouragement was given to the growth of this spirit when in a durbar of great magnificence held on January 1st 1877 on the famous Ridge at Delhi Queen Victoria was proclaimed Empress of India. The Viceroy of that time Lord Lytton had, however to deal with a situation of unusual difficulty. Two successive years of drought produced, in 1877-78 the worst famine India had known. The most strenuous exertions were made to mitigate its effects and eight crores of rupees were spent in importing grain but the loss of life was estimated at 5½ millions. At this time also Afghan affairs once more became prominent.

Second Afghan War

The Amir, Sher Ali, was found to be intriguing with Russia and that fact, coupled with his repulse of a British mission led to the second Afghan War. The British forces advanced by three routes—the Khyber, the Kurram, and the Dushan—and gained all the important vantage points of Eastern Afghanistan. Sher Ali fled and a treaty was made with his son Yakub Khan, which was promptly broken by the murder of Sir Louis Cavagnari, who had been sent as English envoy to Kabul. Further operations were thus necessary, and Sir F. (now Lord) Roberts advanced on the capital and defeated the Afghans at Charasia. A rising of the tribes followed, in spite of Sir D. Stewart's victory at Ahmed Kheyl and his advance from Kabul to Kandahar. A pretender, Siridar Ayub Khan, from Herat prevented the establishment of peace, defeated Gen. Burrows' brigade at Mervad, and invested Kandahar. He was routed in turn by Sir F. Roberts who made a brilliant march from Kabul to Kandahar. After the British withdrawal fighting continued between Ayub Khan and Abdur Rahman, but the latter was left undisputed Amir of Afghanistan until his death in 1901.

In the meantime Lord Lytton had resigned (1880) and Lord Ripon was appointed Viceroy by the new Liberal Government. Lord Ripon's administration is memorable for the freedom given to the Press by the repeal of the Vernacular Press Act, for his scheme of local self-government which developed municipal institutions, and for the attempt to extend the jurisdiction of the criminal courts in the Districts over European British subjects, independently of the race or nationality of the presiding judge. This attempt, which created a feeling among Europeans in India of great hostility to the Viceroy, ended in a compromise in 1884. Other reforms were the re-establishment of the Department of Revenue and Agriculture, the appointment of an Education Commission with a view to the spread of popular instruction on a broader basis and the abolition by the Finance Minister (Sir Evelyn Baring, now Lord Cromer) of a number of customs duties. Lord Dufferin who succeeded Lord Ripon in 1884 had to give his attention more to external than internal affairs. One of his first acts was to hold a durbar at Rawalpindi for the reception of the Amir of Afghanistan which resulted in the strengthening of British relations with that ruler. In 1895 a third Burmese war became necessary owing to the truculent attitude of King Thibaw and his intrigues with foreign Powers. The expedition under General Prendergast occupied Mandalay without difficulty and King Thibaw was exiled to Rangoon, where he died on 16th December 1916. His dominions of Upper Burma were annexed to British India on the 1st of January 1886.

The Russian Menace

Of greater importance at the time were the measures taken to meet a possible, and as it then appeared a probable, attack on India by Russia. These preparations, which cost over two million sterling, were hurried on because of a collision which occurred between Russian and Afghan troops at Peshawar, during the delimitation of the Afghan frontier towards Central Asia, and which seemed likely to lead to a declaration of war by Great Britain.

War was averted, but the Peshawar incident had called attention to a menace that was to be felt for nearly a generation more. It had also served to elicit from the Princess of India an unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy Lord Lansdowne, when the present system of Imperial Service Troops was organised. Under Lord Lansdowne's rule also the defences of the North-Western Frontier were strengthened, on the advice of Sir Frederick (now Earl) Roberts who was then Commander-in-Chief in India. Another form of precautionary measure against the continued aggression of Russia was taken by raising the annual subsidy paid by the Indian Government to the Amir from eight to twelve lakhs.

On the North-Eastern Frontier there occurred (1891) in the small State of Manipur a revolution against the Raja that necessitated an inquiry on the spot by Mr. Quinlan, the Chief Commissioner of Assam. Mr. Quinlan, the commander of his escort, and others, were treacherously murdered in a conference, and the escort ignominiously retreated. This disgrace to British arms led to several attacks on frontier outposts which were brilliantly defeated. Manipur was occupied by British troops and the government of the State was reorganised under a Political Agent. Lord Lansdowne's term of office was distinguished by several other events, such as the passing of the Parliamentary Act (Lord Cross's Act, 1892), which increased the size of the Legislative Councils as well as the number of non-officials in them; legislation aimed at social and domestic reform among the Hindus; and the closing of the Indian Mints to the free coinage of silver (1893). In Burma great progress was made under Sir Alexander Mackenzie as Chief Commissioner: comparative order was established and large schemes for the construction of railways, roads, and irrigation works were put in hand. (The Province was made a Lieutenant-Governorship in 1897).

Frontier Campaigns.

Lord Elgin who succeeded Lord Lansdowne in 1894 was confronted at the outset with a deficit of Rs. 2½ crores, due to the fall in exchange. (In 1893 the rupee fell as low as 1s. 1d.) To meet this the old five per cent. import duties were reimposed on a number of commodities but not on cotton goods and within the year the duty was extended to piece-goods, but not to yarn. The reorganisation of the Army which involved the abolition of the old system of Presidency Armies, had hardly been carried out when a number of risings occurred along the North West Frontier. In 1895 the British Agent in Chitral—which had come under British influence two years previously when Sir H. M. Durand had demarcated the southern and eastern boundaries of Afghanistan—was besieged and had to be rescued by an expeditionary force. Two years later the Waziri, Swatis, and Mohmands attacked the British positions in Malakand, and the Afridis closed the Khyber Pass. Peace was only established after a prolonged campaign (the Tirah campaign) in which 40,000 troops were employed, and over 1,000 officers and men had been lost. This was in itself a heavy burden on the finances of India, which was increased by the serious and widespread

famine of 1894-97 and by the appearance in India of bubonic plague. The methods taken to prevent the spread of that disease led, in Bombay to rioting, and elsewhere to the appearance in the vernacular press of seditious articles which made it necessary to make more stringent the law dealing with such writings.

Lord Curzon's Viceroyalty

With famine and plague Lord Curzon also, who succeeded Lord Elgin in 1899 had to deal. In 1901 the cycle of bad harvests came to an end but plague increased and in 1904 deaths from it were returned at over one million. Of the many problems to which Lord Curzon directed his attention only a few can be mentioned here. Some indeed claim that his greatest work in India was not to be found in any one department but was in fact the general gearing up of the administration which he achieved by his unceasing energy and personal example of strenuous work. He had at once to turn his attention to the North West Frontier. The British garrisons beyond our boundary were gradually withdrawn and replaced by tribal levies, and British forces were concentrated in British territory behind them as a support. An attempt was made to check the arms traffic and work on strategic railways was pushed forward. The fact that in seven years he only spent a quarter of a million upon repressive measures and only found it necessary to institute one blockade (against the Mahsud Waziris) is the justification of this policy of compromise between the Lawrence and Forward schools of thought. In 1901 the trans-Indus districts of the Punjab were separated from that Province and together with the political charges of the Malakand the Khyber, Kurram, Pooni, and Wana were formed into the new North West Frontier Province under a Chief Commissioner directly responsible to the Government of India. That year also witnessed the death of Abdur Rahman, the Amir of Afghanistan, and the establishment of an understanding with his successor Habibullah. In 1904 the attitude of the Dalai Lama of Tibet being pro-Russian and anti-British it became necessary to send an expedition to Lhasa under Colonel (Sir Francis) Younghusband. The Dalai Lama abdicated and a treaty was concluded with his successor.

In his first year of office Lord Curzon passed the Act which in accordance with the recommendations of the Fowler Commission practically fixed the value of the rupee at 1s 4d, and in 1900 a Gold Reserve fund was created. The educational reforms that marked this Viceroyalty are dealt with elsewhere chief among them was the Act of 1904 reorganising the governing bodies of Indian Universities. Under the head of agrarian reform must be mentioned the Punjab Land Alienation Act designed to free the cultivators of the soil from the clutches of money-lenders, and the institution of Agricultural banks. The efficiency of the Army was increased (Lord Kitchener was Commander-in-Chief) by the re-arming of the Indian Army the strengthening of the artillery and the reorganisation of the transport service. In his relations with the Princes, Lord Curzon emphasised their position as partners in administration, and he founded the Imperial Cadet Corps to give a military education to the sons of ruling and

aristocratic families. In 1902 the British Government obtained from the Nizam a perpetual lease of the Assigned Districts of Berar in return for an annual payment of 25 lakhs. The accession of King Edward VII was proclaimed in a splendid Durbar on January 1, 1902. In 1904 Lord Curzon returned to England for a few months but was re-appointed to a second term of office, Lord Ampthill, Governor of Madras, having acted as Viceroy during his absence. The chief act of this second term was the partition of Bengal and the creation of a new Province of Eastern Bengal and Assam—a reform, designed to remove the systematic neglect of the trans-Gangetic areas of Bengal, which evoked bitter and prolonged criticism. In 1906 Lord Curzon resigned, being unable to accept the proposals of Lord Kitchener for the re-adjustment of relations between the Army headquarters and the Military Department of the Government, and being unable to obtain the support of the Home Government. Lord Curzon was succeeded by Lord Minto the grandson of a former Governor General. It was a stormy heritage to which Lord Minto succeeded for the unrest which had long been noticed developed in one direction into open sedition. The occasion of the outbreak in Bengal was the partition of that province. The causes of the flood of seditious writings and speeches, of the many attempts at assassination, and of the boycott of British goods are less easily definable. The mainspring of the unrest was a deep rooted antagonism to all the principles upon which Western society, especially in a democratic country like England, has been built up.

Outside Bengal attempts to quell the dissension by the ordinary law were fairly successful. But scarcely any province was free from disorder of some kind and though recourse was had to the deportation of persons without reason assigned under an Act of 1818 special Acts had to be passed to meet the situation viz.—an Explosives Act, a Prevention of Seditious Meetings Act and a Criminal Law Amendment Act which provides for a magisterial inquiry in private and a trial before three judges of the High Court without a jury. Concurrently with these legislative measures steps were taken to extend representative institutions. In 1907 a Hindu and a Mahomedan were appointed to the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the legislative councils and conferring upon them wider powers of discussion. The executive councils of Madras and Bombay were enlarged by the addition of an Indian member.

As regards foreign policy Lord Minto's Viceroyalty was distinguished by the conclusion (1907) between Great Britain and Russia of an agreement on questions likely to disturb the friendly relations of the two countries in Asia generally, and in Persia Afghanistan and Tibet in particular. Two expeditions had to be undertaken on the North West frontier, against the Zekka Khels and the Mohmands, and ships of the East Indies Squadron were frequently engaged off Muscat and in the Persian Gulf in operations designed to check the traffic in arms through Persia and Mesopotamia to the frontier of India.

Visit of the King and Queen.

Sir Charles (Lord) Hardinge was appointed to succeed Lord Minto in 1910. His first year in India was marked by the visit to India of the King Emperor and the Queen, who arrived at Bombay on December 8, 1911. From there they proceeded to Delhi where in the most magnificent durbar ever held in India, the coronation was proclaimed and various boons including an annual grant of 50 lakhs for popular education were announced. At the same ceremony His Majesty announced the transfer of the capital of India from Calcutta to Delhi, the union of the two Bengals under a Governor-in-Council, the formation of a new Lieutenant-Governorship for Behar, Chota Nagpur and Orissa and the restoration of Assam to the charge of a Chief Commissioner.

In August, 1913 the demolition of a lavatory attached to a mosque in Cawnpore was made the occasion of an agitation among Indian Mahomedans and a riot in Cawnpore led to heavy loss of life. Of those present at the riot 106 were put on trial but subsequently released by the Viceroy before the case reached the Sessions and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mahomedans.

Still more serious trouble occurred in September 1914 when a riot at Budge-Budge among a number of Sikh emigrants returned from Canada gave a forerunner of the revolutionary plans entertained by those men. The sequel revealed in two conspiracy trials at Lahore showed that the Ghadr conspiracy was widespread and had been consistently encouraged by Germany.

Lord Chelmsford as Viceroy

Lord Hardinge whose great services had been rewarded with the Knighthood of the Garter left India in 1916 and was succeeded by Lord Chelmsford, whose tenure of office was destined to be one of the most eventful in the modern history of India. The part played by India in the war was developed in every possible way. Not only was the Indian Army increased but the resources of the country were developed with the help of the Munitions Board and India assumed responsibility for 100 millions of the war debt. The share of India in the Imperial burden of the war was emphasised in another and very significant way by her representation in the Imperial War Cabinet in London by His Highness the Maharaja of Bikaner and Sir S. P. (Lord) Sinha. On the Frontier where there had been numerous though comparatively slight disturbances in 1914-15 a punitive expedition had to be undertaken against the Mahsuds.

In 1917 Mr. Montagu, who had succeeded Mr. Chamberlain as Secretary of State, carried out the latter's intention of visiting India. The result of the visit was shown in the following year when a report was issued containing what is known as the joint scheme of reform evolved by the Secretary of State and the Viceroy. Shortly after this report there was issued a report by the Special Committee of Inquiry over which Mr. Justice Rowlatt presided into seditious activities in India. That report and the legislation which followed in consequence of it together with the announcement of the proposed reform scheme, led to a

renewal of political discussion and agitation which had to a great extent been in abeyance during the early years of the war.

Early in 1918 prolonged strikes in Bombay and elsewhere showed that India though comparatively little affected by the economic results of the war was confronted by industrial and economic problems which were none the less grave. The gravity of those problems was increased by the ravages of influenza which is supposed to have caused 8,000,000 deaths during the winter months of 1917-18. Disturbances broke out in April as a sequel to the passive resistance movement against the Rowlatt Act (the Satyagraha Movement) which produced a situation to which there has been no parallel since the Mutiny. It is sufficient here to state that in Ahmedabad, Viramgam, Delhi, Lahore, Amritsar, Gujranwala and other places the crowd by attacking life and property and by train wrecking and tearing up railway lines and telegraph wires, provoked a situation which could only be met by the proclamation of martial law and the enforcement of military measures for the protection of law-abiding subjects and for the suppression of disorder.

Exaggerated reports of those riots and of the effect of the Rowlatt Act may be presumed to have had some influence on the Amir of Afghanistan when he declared war and invaded British territory. Amir Habibullah Khan who had been loyal to his treaty obligations throughout the war was murdered in February and after a brief occupation of the throne by his brother Nasrullah Khan his son Amanullah had been declared Amir. A sequel to this war was the renewal of trouble along a great part of the North Western frontier where the tribesmen who had at first appeared to be impressed by the British successes took the offensive against our advance posts especially in southern Waziristan. The operations which necessarily followed and the severity of the fighting were on a scale never previously reached in frontier war and made the campaign of unusual length.

The Government of India Bill embodying Mr. Montagu's proposals for the popularisation of the system of Government was passed in December. The next year 1920 more than any which preceded it was distinguished by political agitation. The cause of this was in part the indignation created by the facts disclosed in the report of the Hunter Commission on the outrages of 1919 in the Punjab and elsewhere and the stimulus given to the Khilafat agitation by the terms of the Peace treaty with Turkey.

Lord Reading's Viceroyalty

The fruits of agitation were reaped in plenty in 1921 the first year of Lord Reading's term of office. Murderous outrages at Malagon, Dharwar and elsewhere were followed by a rebellion of the Moplahs in Malabar which assumed the most serious proportions and necessitated prolonged military operations.

It had been arranged that H. R. H. the Prince of Wales should visit India at the end of 1920 and should open the new Councils in 1921, but for reasons of health that visit had to be postponed and H. R. H. the Duke of Connaught came to India early in 1921 in order to open the new Councils. The Prince's visit took place in 1921 and was essentially non-political.

The enthusiasm with which the Prince was greeted during his tour was very marked. But simultaneously with the loyal display riots broke out in more than one of the cities which he visited. But after the imprisonment of some of the leading agitators in the early part of 1922 the country enjoyed comparative quiet except in the Punjab where the Akali movement among the Sikhs which had started as a puritan religious movement developed into a political movement attended by constant and wide spread disorder. The enhanced position of India in the Empire and the position of India as a nation entering actively into the work of the League of Nations were emphasised during the year by the tour of the Dominions undertaken by the Hon S. S. Sastri.

The Salt Tax

Early in 1929 a great deal of criticism was excited by Lord Reading's certification of the doubling of the salt tax under the powers conferred by the Reformed constitution in opposition to the clearly expressed will of the Legislative Assembly. Objection was taken to this step not so much because an increase in the Salt Tax had always been looked upon as a measure to which resort should be made only in grave emergencies as because the financial powers of the elected chambers much emphasised in the Montagu Chelmsford Report were thus shown to be capable of restriction.

Break up of non-co-operation

Two causes combined during the year to weaken the position of the extremists. The first was the split in the Congress the second the rise of communal feeling between Hindus and Mahomedans. The Congress split was brought about by Mr C. B. Das who realising no doubt, that Mr Gandhi had failed and it was unlikely that any other man would have greater success by a rigid adherence to his methods declared in favour of standing for the Congress.

The other cause was the disappearance of the surface unity between Hindus and Mahomedans which Mr Gandhi helped by strong feeling among Mahomedans on the Turkish question had temporarily contrived. The split was followed by the formation of two pan-Hindu movements the Shuddhi movement announced by Swami Shradhanand which aimed at the re-conversion to Hinduism of the Malkhana Rajputs and other low class occupants of the fringe of Islam and the Sangathan movement of which Pandit Malaviya was the sponsor and which aimed at teaching Hindus physical exercises and sword play so that they might be the better able to protect themselves. These two movements greatly irritated the Mahomedans and during the year there were between fifteen and twenty serious Hindu Mahomedan riots occurring in all parts of India.

Violent Movements

In the Punjab the Akali movement showed an increasing tendency to forget the teachings of Mr Gandhi. The Babar Akalis murdered several of their co-religionists whose political views they did not approve and the Akali Dal became a more definitely military organisation acting directly under the orders of the Shrine Committee. After a career of misgovernment and intrigue against the neighbouring state of Patiala the Maharaja of Nabha

voluntarily abdicated. Somewhat ludicrously the Akalis turned him into a martyr and the movement became sufficiently formidable for both the Akali Dal and the Shrine Committee to be declared illegal associations. Many arrests were made but owing to the lack of unity in the extremist camp an attempt of the Congress to secure all India support for the Akalis had a meagre result.

During the year there were an unusual number of frontier outrages. Several officers were shot and worldwide attention was attracted by the kidnapping of Molly Pilla after the murder of her mother, and by her heroic rescue by Mrs Starr. Coupled with the slow rate of progress of the operations in Waziristan these continued incidents provoked some comment.

There was also a sensational revival of the pre-war anarchical societies in Bengal but the range of their achievements was small.

Mr Gandhi's Release

Mr Gandhi's premature release from Yerwada Jail in consequence of an operation for appendicitis temporarily revived the drooping hopes of the extremists but any idea that he would organize another huge anti Government movement was rapidly shattered. The breach between him and Mr Das steadily widened and the belief of Hindu politicians in Mr Gandhi's common sense diminished though their esteem for his character remained as high as ever. Moreover the feeling between Hindus and Mahomedans which had suddenly appeared the previous year darkened the whole face of the country. With the abolition of the Khilafat by Mustapha Kemal in March the *rason d'être* of the famous pact between Mr Gandhi and the AIs was destroyed and ultimately no longer felt the restraint of political expediency. The Hindu conversion and organization movements of *Shuddhi* and *Sangathan* were opposed by exactly parallel Mahomedan movements *Tawhid* and *Tanzim* rumors were frequent that some mysterious All India Mahomedan clique was planning aggressive action against Hindus and ex-ilement was brought to fever heat by the riots in the Frontier Province the Punjab the United Provinces Delhi Calcutta the Central Provinces and Hyderabad which broke out during the autumn season of religious festivals. In September Mr Gandhi decided on a 21 days fast which he successfully accomplished partly as an expiation for his share in the bad feeling and partly to draw the attention of the country to the urgency of the problem. Simultaneously a conference of representatives of all communities including the Metropolitan and other English visitors was called at Delhi to decide what steps could be taken to bring about a better state of affairs. The conference passed some excellent resolutions but on the very day when Mr Gandhi's fast ended riots again broke out and what gave the matter a grave aspect was that the date of the riots had been predicted and it was commonly said that they had been carefully planned for that very day.

Reforms Imperilled

The year saw the final collapse of non-cooperation. Though Mr Gandhi and a dwindling band of followers clung to *Khaddar* and the triple boycott lawyers returned to their practices schoolboys and students finally despaired of national education and the best

brains of non-co-operation followed Mr. Das into the Councils. The programme announced by Mr. Das was to wreck the Reforms, and in this ambition he was reasonably near success. Obstructive tactics effected the resignation of the Ministers in the Central Provinces and Bengal and left these two provinces to be administered by Governors without domestic help but in other parts of India the Councils did well in the circumstances.

Underground the revolutionary movement continued. A series of assassinations took place in Bengal, and Mr. Das incurred bitter criticism by associating himself with a tribute to the murderer of an inoffensive Englishman in Calcutta.

The third attempt to climb Everest came very near to success. A height 600 feet from the top was reached but in an effort to accomplish the last stretch Mallory and Irvine were killed. It was not established whether they had or had not reached the top.

India in 1925 and 1926

In 1925 the extremists received a sad blow by the death of Mr. C. B. Das, leader of the Swarajist Party. His death took the Party completely aback and the counsel of Mr. Gandhi had to be sought in order to deal with this disastrous situation. Mr. Gandhi sent an invitation to Arabindo Ghose, a Bengali litterateur and reputed thaumaturge who since the assassinations of 1908 and 1909 has been living on French territory at Pondicherry to take command of the Swarajist band. Mr. Ghose declined with thanks, and the lot thereupon fell upon Mr. Ben Gupta, a Bengali politician of whom for the rest of the year little was heard outside Bengal. From this point the falling away of Swarajists from the old austere principle of ruthlessness and inextinguishable obstruction proceeded apace. First Mr. Tambre, a Swarajist in the Central Provinces, accepted an Executive Councillorship from the alien Government, next Mr. Patel a Bombay Swarajist took the Presidential chair in the Assembly and expressed his readiness if necessary to meet the Viceroy nine times a day, and then others in Bombay and the Central Provinces adopted the policy of "responsive co-operation"—a phrase denoting a critical attitude towards Government coupled with readiness in certain circumstances to receive a lucrative post from Government. The political sky, in fact, brightened considerably.

The principal event of the year in India was the arrival in April of Lord Irwin as Viceroy on the retirement of Lord Reading from that office.

Indian political history during 1925 was a record of continuous improvement in the outlook. The Swarajists in the Indian Legislative Assembly proved to be of less account than in any season since their first entry into that body in January 1924. Their prestige similarly diminished in the Provincial Legislative Councils where they had hitherto enjoyed dominating power. The proximity of the General Elections to all the legislatures in the autumn of the year filled them with the desire of some dramatic effort to catch the imagination of the constituencies and they consequently organised spectacular "walk-outs" from the legislatures. The first took place in the Legislative Assembly. Every effort short of physical coercion was employed

by the extremists to persuade or compel the President of the House Mr. V. J. Patel, formerly Deputy Leader of the Swarajist party in the House, to accompany the move by quitting the chair. Had he done so, there would have been an awkward constitutional crisis. But Mr. Patel refused, and the demonstration fell flat. The same may be said of corresponding efforts in the Provincial Councils.

But the outstanding political feature of the year was the profound aggravation of the tension and bitterness between the Hindu and Moslem communities. This resulted in grave riots in Calcutta and in similar disturbances less only in magnitude in numerous smaller centres in Upper India. This increase of communal trouble was directly associated with the propaganda carried on by leaders of political opinion in preparation for and in connection with the General Elections. The elections themselves were marked by no riotous outbreak of importance but they were largely fought on communal lines not only as between Hindus and Moslems but as between Brahmins and non-Brahmins, and on lines of local personal and sectional rivalries. Nowhere did candidates appeal to the voters on broad grounds of public policy nor even was much heard of the great constitutional issues and of the appeals made by the Secretary of State and successive Viceroys for the co-operation of all political classes to work the existing Constitution in preparation for the next constitutional inquiry required by statute.

An important development during the year was the presentation in August by the Royal Commission on Currency and Exchange of a report recommending that the functions hitherto exercised by Government in connection with these matters should in future be carried out by the newly instituted Indian Reserve Bank that the Gold Standard Reserve and the Paper Currency Reserve should be amalgamated for the purpose and that there should be instituted a new Gold Bullion Standard, with the rupee exchange ratio fixed at 15 to 1 of gold. The Government of India at the autumn session of their legislature immediately after the issue of the report, announced their acceptance of the Commission's recommendation with regard to the exchange ratio and introduced a bill to give effect to it.

Another event of great importance to Indian economic welfare during the year was the appointment early in the year and the arrival in India in August of a Royal Commission to inquire into questions concerning the improvement of Indian agriculture. This body consisting of both English and Indian members had as its President Lord Linlithgow and after preliminary meetings in Simla spent the cold weather carrying on its investigations in the Provinces.

Events in 1927

Tension between the Hindu and Mahomedan communities continued during 1927 and was marked by several outbreaks of violence which drew from H. E. the Viceroy more than one weighty pronouncement and an offer to preside at a conference on the subject if the leaders of the two communities thought that any good purpose could thereby be served. More than one vain attempt was made, as in previous

years, to arrive at an agreement between the two communities—particularly on the most vexed questions of cow killing and music before mosques. Towards the end of the year the announcement was made in Parliament of a purely Parliamentary Commission, under the chairmanship of Sir John Simon, to inquire into the government of the country and this aroused a storm of indignant protest throughout the country. The Liberals joined in the protest mainly because no Indians were included in the personnel of the Commission, the National Congress which passed a resolution in favour of complete national independence protested mainly on the ground that Parliament had no right to determine what should be the future form of government in India, and both these parties joined in proclaiming a boycott of the Commission. The Mahomedans were divided

on the question, but the majority of them were opposed to the boycott policy.

Apart from politics and long discussions involved by the Reserve Bank Bill the year was memorable as one of disaster. Great floods occurred in Sind, Kachhar, Gujrat and Orissa, a cyclone swept over Malabar and a devastating fire took place in Peshawar—so making great demands on the resources of Government and the generosity of the public.

The visit of His Majesty the King of Afghanistan to Karachi and Bombay on his way to Europe, was made the occasion for a very remarkable outburst of popular enthusiasm. His Majesty who was accompanied by the Queen, stayed some days in Bombay, and his replies to many addresses and his sermon in a mosque advocating religious tolerance, created a great sensation.

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1800, a few years before the deaths of Queen Elizabeth and Akbar the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coast of India and in Bengal, were administered at each of the principal settlements of Madras (Fort St George), Bombay and Calcutta (Fort William) by a President or Governor and Council consisting of the senior servants of the Company. The three Presidencies were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal) and the

supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784 which established the Board of Control in England vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General is the sole representative of the Crown in India, he is assisted by a Council, composed of high officials, each of whom is responsible for a special department of the administration.

Functions of Government.

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share

in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country and directly manages a considerable portion of them. It has constructed and maintains most of the important irrigation works. It owns and manages the post and telegraph systems. It has the monopoly of the Note issue, and it alone can set the mints in motion.

It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated and was definitely regulated by the Reform Act of 1919.

THE REFORMS OF 1919

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921. The Act was the outcome of an inquiry conducted in India in the winter of 1917-18 by the Secretary of State (Mr. Montagu) and the Viceroy (Lord Chelmsford), the results of which were embodied in their Report on Indian Constitutional Reform issued in the spring of 1918. The recommendations in this report were supplemented by those of two Committees which toured in India in the winter of 1918-19 and which issued their Reports in the spring of 1919. A third Committee was appointed during the latter year to make recommendations for the modification of the system of administration of Indian affairs in the United Kingdom and issued their Report while the Government of India Bill was under examination by a Joint Select Committee of both Houses of Parliament. The Joint Select Committee in their turn issued an exhaustive Report on the Bill, which was passed in a form practically identical with that recommended by the Joint Committee, and received the Royal Assent on the 23rd December 1919.

The Divisions.—British India for administrative purposes is divided into 15 provinces, each with its separate Local Government or administration. In nine of the provinces—the three Presidencies of Madras, Bombay and Bengal, the United Provinces of Agra and Oudh, the Punjab, Bihar and Orissa, the Central Provinces, Burma, and Assam—the Local Government consists of a Governor and an Executive Council of not more than four members, and two or more Ministers. In 1923 Burma, which was excluded from the original scheme was brought into line with it. An Act of Parliament was passed constituting Burma a Governor's Province, with a Governor, an Executive Council and Ministers and a Legislative Council elected on a very democratic franchise, which gave the vote to women. The remaining six provinces are directly administered by Chief Commissioners, who are technically mere agents

of the Central Government of India. No change has been made by the Act of 1919 in the system of administration in these six minor provinces.

Dyarchy.—In these nine provinces the executive Government is a dual organism which owes its unity to the Governor. One half of the organism consists of the Governor and his executive Council, all of whom are appointed by the King. This body is responsible for the administration of those subjects which are reserved. The other half of the executive organism is the Governor acting with the advice of Ministers who are appointed by him, hold office during his pleasure, and must be elected members of the Provincial Legislative Council. To the Governor acting with Ministers is entrusted the administration of transferred subjects.

The Object.—The framers of the Act of 1919 had a twofold object in view. Their primary object was to devise a plan which would render possible the introduction by successive stages of a system of responsible government in British India in modification of the previous system under which the Governments in India both central and provincial, received their mandates from the British Parliament acting through the Secretary of State for India, the Cabinet Minister responsible to Parliament for the administration of Indian affairs.

The Provinces.—Starting from the premise that it was in the provinces that the first substantial steps must be taken towards the development of a system of responsible government, the framers of the Act of 1919 provided for a statutory demarcation of the functions to be exercised by the Government of India and the Provincial Governments respectively, in their administrative capacity. No attempt was made in this connection to limit the field open to the Indian Legislature which still retains a concurrent (though not an overriding) power of legislation for the affairs of the provinces in general and of individual provinces; but the rules under the Act provide specifically for the exercise of this right in certain specified

provincial matters, and the theory upon which the Act proceeds assumes that a convention will be established and rigorously observed which will confine intervention by the Indian Legislature in provincial affairs to matters so specified.

Finance.—The revenues of India—or rather their sources—are definitely divided between the Central and Provincial Governments. The Provincial Governments have now almost complete control over the administration of their allocated revenues, they have power to supplement them by raising loans on the security of these revenues, and their right, subject in certain cases to the Governor-General's sanction to initiate new taxation measures is formally recognised.

It was found impossible to devise any scheme of allocation of revenues between the Central and Provincial Governments which did not leave the former with a deficit. This deficit is to be met in part by an annual contribution from seven of the eight Governor provinces, the province of Bihar and Orissa, owing to the comparative exigency and inelasticity of its own

revenue, having been exempted from this contribution. The aggregate sum thus due from the provinces to the Government of India at the outset is Rs. 938 lakhs, of which Madras contributes Rs. 348 lakhs, the United Provinces Rs. 240 lakhs, the Punjab Rs. 175 lakhs, and the other four provinces sums ranging from Rs. 15 lakhs to Rs. 64 lakhs. The annual contribution is in no case to be subject to increase in the future and if reduction of the aggregate is found possible by the Government of India, reductions are to be made in fixed proportions from the quota of the several provinces.

Responsibility.—The first steps towards responsibility were to transfer the Provincial Legislative Council into a body of sufficient size and with a sufficiently large elected majority (which the Act fixes at 70 per cent. as a minimum) to represent adequately public opinion in the province, and to create an electorate. The first franchise rules have given the vote to about 5,000,000 of the adult male population, and have enabled the Legislative Council of any Governor's province to extend the franchise to women. The following table shows the strength and composition of each of the Provincial Councils—

Province	Elected.	Nominated and ex-officio		Total
		Officials.	Non-officials.	
Madras	98	28	6	127
Bombay	86	20	5	111
Bengal	113	20	6	139
United Provinces	100	18	5	123
Punjab	71	16	6	93
Bihar and Orissa	76	18	0	108
Central Provinces	58	10	5	73
Assam	39	9	5	53
Burma	78	15	8	101

The figures for officials in this table are maxima in every case, and where less than the maximum number of officials is nominated to any Council, the number of nominated non-officials must be increased in proportion, e.g., if there are only 16 officials (nominated and ex-officio) on the United Provinces Council there must be seven

nominated non-officials. The official members who have seats ex-officio are the members of the Executive Council, who are at present four in number the statutory maximum in Madras, Bombay and Bengal, three in Bihar and Orissa, and two in each of the remaining provinces. These Executive Councils contain an equal

number of Indian and British members except in Bihar and Orissa where two of the three members are British officials.

Electorates.—The electorates in each province are arranged for the most part on a basis which is designed to give separate representation to the various races, communities and

special interests into which the diverse elements of the Indian population naturally range themselves. Although there are minor variations from province to province, a table showing their character in one province (Bengal) will give a sufficiently clear idea of the general position.

Class of Electorate.	No. of Electorates of this Class.	No. of Members returnable by Electorates of this Class.
Non-Muhammadan	42	46
Muhammadan	24	29
European	3	5
Anglo-Indian (in the technical sense of persons of mixed European and Asiatic descent)	1	2
Landholders	5	6
University	1	1
Commerce and Industry	8	15
Total	94	118

Of the 94 constituencies in Bengal, all but nine (those representing the University and Commerce and Industry) are arranged on a territorial basis (i.e. each constituency consists of a group of electors, having the prescribed qualifications which entitle them to a vote in a constituency of that class, who inhabit a particular area). The normal area for a "Muhammadan" or "non-Muhammadan" constituency is a district (or where districts are large and populous, half a district) in the case of rural constituencies, and, in the case of urban constituencies, a group of adjacent municipal towns. Some large towns form urban constituencies by themselves and the City of Calcutta provides eight separate constituencies: six "non-Muhammadan" and two "Muhammadan" the latter of course being coterminous with the former.

Throughout the electoral rules there runs a general classification of the various kinds of constituencies into two broad categories, those which are designed to represent special interests, such as Landholders, Universities, Planter or Commerce being described as special constituencies, and those which are based on a racial distinction—Muhammadan, European, Sikh, etc.—being known as "general" constituencies.

Voters' Qualifications.—The qualifications for electors (and consequently for candidates) vary in detail from province to province, chiefly on account of variations in the laws and regulations which form the basis of assessment of income or property values. Generally speak-

ing both in rural and urban areas the franchise is based on a property qualification as measured by the payment of a prescribed minimum of land revenue or of its equivalent or of income tax, or of municipal taxes but in all provinces retired, pensioned or discharged officers and men of the regular army are entitled to the vote, irrespective of the amount of their income or property.

Election Results.—A Parliamentary Paper (Cmd. 2923) published in 1927 gives the following summary of election results. This return relates to the third General Election which took place in 1926 except in the case of the Council of State and the Burma Legislative Council the elections to which took place in 1925. In these two cases the elections were the second under the Act of 1919 because the Council of State has a life-time of five years as compared with three years in the case of the Legislative Assembly and the Provincial Councils and because the Reforms were inaugurated in Burma two years later than in other provinces.

The figures given for the number of electors who voted and the percentages of the number who voted to the number on the electoral roll are, in the case of plural member constituencies approximate only. In these constituencies each elector has as many votes as there are seats to be filled and the figures are calculated on the assumption that each elector used all his votes; that is, the figure given as the number of electors who voted is the result of dividing the number of votes polled by the number of seats to be filled.

Class of Constituency	No. of Seats	No. of Seats filled without contest	No. of Candi- dates for contested Seats.	Percentage of Votes polled to No. of Electors in contested Con- stituencies.	Per- centage in 1923.

POWERS OF PROVINCIAL LEGISLATIVE COUNCILS

In origin the legislative authority in British India was a meeting of the Governor-General (or, in the case of the Presidencies of Madras and Bombay, of the Governor) with his Executive Council, for the purpose of legislation. When met for this purpose there were added to the Executive Council certain additional members, at first very few in number and those few all nominated by the Governor-General or the Governor as the case might be. A Council so constituted had originally no powers or duties beyond those immediately arising out of the discussion of the particular legislative measure which at the time was engaging its attention, and its functions were confined strictly to the discussion and enactment of legislative measures. In course of time the number of "additional" members, and the proportion of these who were non-official Indians, were steadily increased the principle of election was gradually substituted for nomination as the means of selecting non-official members, and the functions of the Councils were extended so as to include the right of interpellation of the discussion of matters of general public interest, and of criticising and discussing the budget proposals of the Executive Government. This extension of the powers of the Councils was in the main the result of the "Morley Minto Act" of 1909. The Indian Councils Act of 1892 had given power to discuss the budget, but not to divide the Council upon it. Lord Morley's Act went further and provided that notwithstanding the terms of the Indian Councils Act of 1891 which had restricted the powers of all Councils to the discussion of legislative measures, the Local Government might make rules authorising the discussion of the annual financial statement of any matter of general public interest and the asking of questions under such conditions and restrictions as might be imposed by the rules, and these rules recognised the right of the Councils to vote on motions thus submitted for their discussion. The other results of the Act of 1909 were definitely to recognise the principle of election as the means of selecting non-official members of all Councils (although the method adopted was mainly that of indirect election) a considerable increase in the number of both non-official and official members, and the setting up in every province of a non-official (though not save in one province an elected) majority. A further important, though indirect, result of the Morley Minto Act was the appointment of an Indian member to the Executive Council of the Governor-General, and to such Provincial Executive Councils as were then in existence and subsequently created.

Old System.—But although the Legislative Councils (which, originally created in two provinces only in addition to the Governor-General's Legislative Council, existed in 1919 in nine provinces) had steadily acquired a more and more representative character and a large share of the normal functions of a legislative assembly as generally understood, they still remained in theory up to the passing of the Act of 1919 mere accessories to the Executive Government of the provinces for the purpose of advising on, and

enacting, legislation. It is true that the non-official element in the Provincial Councils as constituted by Lord Morley's Act of 1909 had acquired a considerable measure of control over legislation, in view of the fact that in most provinces that Act and the rules framed under it placed the non-official members in a slight majority over their official colleagues, but for various reasons this control even in the sphere of legislation can hardly be described as definite popular control and over matters outside the legislative sphere the Councils had no controlling voice at all.

The Changes.—The most important changes made by the Act of 1919 in the powers of the Provincial Councils were—

- (1) the power to vote (and consequently to withhold) supplies
- (2) a greatly enhanced freedom of initiation in the matter of legislation, and
- (3) power to frame their own rules of procedure in matters of detail, subject to the Governor's concurrence.

A further right which the Councils will acquire after four years from the time of their commencement is the right to elect their own Presidents. At the outset the President is nominated by the Governor, but from the start every Council has an elected Deputy President. The Governor (who formerly was *ex-officio* President of his Legislative Council) no longer has any direct connection with its proceedings. The first-named of these newly acquired powers is of sufficient importance to require a detailed explanation of its scope which can best be given in the terms of the Act itself (section 72).

72D—(1) The provisions contained in this section shall have effect with respect to business and procedure in governors' legislative councils.

(2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year and the proposals of the local government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed—

Provided that—

(a) the local government shall have power in relation to any such demand to act as if it had been assented to notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject and

(b) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying on of any department and

(c) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the Governor, communicated to the Council.

(8) Nothing in the foregoing sub-section shall require proposals to be submitted to the Council relating to the following heads of expenditure —

(i) Contributions payable by the local Government to the Governor-General in Council; and

(ii) Interest and sinking fund charges on loans; and

(iii) Expenditure of which the amount is prescribed by or under any law; and

(iv) Salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and

(v) Salaries of judges of the high court of the province and of the advocate-general.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the Governor shall be final.

Executive and Legislature.—In the light of these facts it is now possible to explain more exactly the relationship between the provincial executive and the provincial legislature. The dual character of the former has already been mentioned, and the corresponding bifurcation of provincial subjects into reserved and transferred categories. The rules under the Act prescribe a list of 30 subjects which are transferred to the administration of the Governor acting with Ministers, the more important of which are Local Self-Government, Medical Administration, Public Health, Education (with certain reservations), Public Works, Agriculture, Excise and Development of Industries. The reserved subjects comprise all those in the list of "provincial (as distinct from central) subjects which are not transferred.

Machinery.—No change has been made by the Act of 1919 in the machinery and methods of administration by the Governor in Council. Decisions are taken at the Council Board, as before, by a majority vote, and the Governor is entitled as before, to override such a vote in certain specified circumstances if he disagrees with it. For such decisions the Governor in Council remains as before, responsible to the Secretary of State and Parliament, and on questions of legislation and supply he has the power of endorsing them despite opposition by a majority of the Legislative Council. But the whole spirit of the Act and the existence of a large non-official elected majority in every Provincial Legislative Council is an important factor in determining the policy to be pursued by the official half of the Government in its administration of reserved subjects. A further and not less important factor is the existence in the Government, side by side with the Executive Council, of two or more Ministers appointed from the elected members of the legislature, who, though they are not charged by law with, and in fact are legally absolved from any responsibility for decisions on matters outside the transferred sphere, will necessarily be able, and in fact are expected, to make their opinions felt by their colleagues in the Executive Council. But

these factors, while they will doubtless lead to constant endeavour on the part of the official half of the Government to accommodate its policy to the wishes of its ministerial colleagues and of the majority of the legislature, and to avoid situations which involve resort to the enforcement of its decisions in the face of popular opposition, are not intended to obscure the responsibility to Parliament in the last resort of the Governor in Council for the administration of reserved subjects and the right of His Majesty's Government, and of the Secretary of State as a member thereof to lay down and require the observance of any principles which they regard as having the support of Parliament and in the last resort of the British electorate.

Transfer of Control.—With regard to transferred subjects the position is very different. Here there has been an actual transfer of control from the British elector and the British Parliament to the elector and the Legislative Council in the Indian provinces. The provincial subjects of administration are grouped into portfolios, and just as each member of the Executive Council has charge of a portfolio consisting of a specified list of reserved subjects or departments, so each Minister is directly responsible for the administration of those particular transferred departments which are included in his portfolio. But his responsibility is, not as in the case of a member of the Executive Council, to the Government of India, the Secretary of State and Parliament, but to the Provincial Legislative Council of which he is an elected member and from which he is selected by the Governor as commanding or likely to command the support of the majority of that body. He holds office during the Governor's pleasure, but his retention of office is contingent on his ability to retain the confidence not only of the Governor but also of the Legislative Council upon whose vote he is directly dependent for his salary. Further, the control of the Legislative Council over transferred subjects, both as regards supplies and legislation, is almost entirely free from the restrictions just noticed which necessarily qualify its control over the reserved subjects. It is thus within the power of the Provincial Council to insist on the pursuit of a policy of its own choice in the administration of transferred subjects by withdrawing its confidence from a Minister who departs from that policy and bestowing it only on a successor who will follow its mandate, and this power is dependent on the provincial elector in virtue of his freedom to control the composition of the Legislative Council by the use which he makes of his vote. No doubt this statement requires some qualification before it can be accepted as literally accurate, for, technically the authority charged with the administration of transferred subjects is the Governor acting with Ministers appointed under this Act, not the Ministers acting on their own initiative, and further the Governor, who is not, of course, subject to removal from office by the Legislative Council, is charged personally with responsibility for the peace and tranquillity of his province, and would be entitled, and indeed bound to recommend the removal of a department from the transferred list if he found the legislature bent on pursuing a policy in its administration

which, in his judgment, was incompatible with the maintenance of peace and tranquillity yet the powers of control vested in the Legislative Council over the transferred sphere are undoubtedly great, and it was the opinion at all events of the Joint Select Committee that Legislature and Ministers should be allowed to exercise them with the greatest possible freedom. If after hearing all the arguments, observed the Committee, Ministers should decide not to adopt his advice, then in the opinion of the Committee the Governor should ordinarily allow Ministers to have their way, fixing the responsibility upon them, even if it may subsequently be necessary for him to veto any particular piece of legislation. It is not possible but that in India, as in all other countries, mistakes will be made by Ministers acting with the approval of a majority of the Legislative Council, but there is no way of learning except through experience and the realisation of responsibility.

Provision of Funds.—The terms of the Act leave the apportionment of the provincial revenues between the two halves of the executive for the financing of reserved and transferred subjects respectively to be settled by rules merely providing that rules may be made for the allocation of revenues or moneys for the purpose of such administration, i.e., the administration of transferred subjects by the Governor acting with Ministers. Probably the best description available of the method adopted by the rules for the settlement of this matter is the recommendation of the Joint Select Committee whose proposals have been followed with one modification only to enable the Governor to revoke at any time at the desire of his Council and Ministers an order of allocation or to modify it in accordance with their joint wishes. The passage is as follows:—

The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the problem can readily be solved by the simple process of common sense and reasonable give-and-take, but they are aware that this question might, in certain circumstances become the cause of much friction

in the provincial government, and they are of opinion that the rules governing the allocation of these revenues and balances should be framed so as to make the existence of such friction impossible. They advise that, if the Governor in the course of preparing either his first or any subsequent budget, find that there is likely to be a serious or protracted difference of opinion between the Executive Council and his Ministers on this subject he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects which should continue for at least the whole life of the existing Legislative Council. The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved and certain sources to transferred subjects but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction of the balances. If the Governor desires assistance in making the allocation he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down from the first that, until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

The Committee desire that the relation of the two sides of the Government in this matter as in all others should be of such mutual sympathy that each will be able to assist and influence for the common good the work of the other but not to exercise control over it. The budget should not be capable of being used as a means for enabling Ministers or a majority of the Legislative Council to direct the policy of reserved subjects but on the other hand the Executive Council should be helpful to Ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers.

THE CENTRAL GOVERNMENT

The structural changes made by the Act of 1919 in the system of government outside the nine Governors' provinces are of comparatively minor scope, though the spirit of the Act requires, as has already been shown, considerable modification of the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The only concrete changes made in the constitution of the Central Government are the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however, has had the far-reaching consequence that three of the eight members of the Council are now Indians), and the reconstitution

in a much more enlarged representative and independent form of the central legislature. It has already been observed that this body was, in origin, like all other legislative bodies in India the Governor-General's Executive Council with the addition of certain additional members appointed to assist the Executive Council in the formulation of legislation. Despite its steady growth in size and influence, and despite the introduction of the elective system, the existence of "additional members, who of course under Lord Morley's Act greatly preponderated in numbers over the members proper (i.e. the Executive Council) still persisted up to the passing of the Act of 1919. That Act, however, has entirely remodelled the Indian Legislature,"

as it is now called, which has become, like the Legislative Council in a Governor's province a Legislature with all the inherent powers ordinarily attributed to such a body save such as are specifically withheld by the terms of the Act. It consists of two Chambers. The Council of State contains 60 members, of whom 14 are elected (including one member to represent Berar, who, though technically nominated, is nominated as the result of elections held in Berar) and 24 nominated, of whom not more than 20 may be officials. The "Legislative Assembly" consists of 144 members, of whom 104 are elected (including in the case of the Council of State, one Berar member, who though actually elected, is technically a nominee). Of the 40 nominated members, 20 are required to be officials. The members of the Governor-General's Executive Council are not ex-officio members of either Chamber, but each of them has to be appointed a member of one or other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council may, however speak in either Chamber. The President of the Upper Chamber is a nominee of the Governor-General, as also, for the first four years after the constitution of the Chamber, is the President of the Legislative Assembly. But after that period the Lower Chamber is to elect its own President, and it elects its own Deputy President from the outset. The normal lifespan of each Council of State is five years, and of each Legislative Assembly three years, but either Chamber or both simultaneously, may be dissolved at any time by the Governor-General.

Election.—The method of election for both Chambers is direct and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which no longer exists. Generally speaking, the electoral scheme for the Lower Chamber is on the same model as that for the Provincial Councils already described except that, firstly, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not *per se* a qualification for the franchise, and secondly, that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies are on a provincial basis, that is a fixed number of the elective seats in each Chamber is assigned to representatives of each province, and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the allotment of the elective seats —

	Legislative Assembly	Council of State
Madras	16	6
Bombay	16	6
Bengal	17	6
United Provinces	16	6
Punjab	12	4

Bihar and Orissa	12	2
Central Provinces	6	2
Assam	4	1
Burma	4	2
Delhi	1	
	104	24

Since the area which returns perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members to the Legislative Assembly—namely, the entire province in each case—it follows that on the direct election system this area must be split into constituencies which are much larger than the constituencies for the local Councils, and just as it is generally correct to say that the normal area unit for these rural constituencies for the latter which are arranged on a territorial basis in the district, it may be said that the normal area unit in the case of the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise.—The general result of the first franchise arrangements under the Act is that there is in each province a body of electors qualified to vote for and stand for election to the Provincial Council and that a selected number of these voters are qualified to vote for and stand for election to those seats in the Legislative Assembly which are assigned to the province. The qualifications for candidature for the Legislative Assembly are the same in each province, *mutatis mutandis* as for candidature for the Provincial Council except that in all provinces so long as the candidate can show that he resides somewhere within the province no closer connection with his particular constituency is insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as closely as possible approximating to a Senate of Elder Statesmen, and thus to constitute a body capable of performing the function of a true revising Chamber. With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of enfranchising only persons with a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of intellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted, or of its predecessor, or of the Provincial Council, the holding of high office in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers.—The powers and duties of the Indian legislature differ but little in character within the "central" sphere from those of the provincial Councils within their provincial sphere, and it has acquired the same right of voting supplies for the Central Government.

But as no direct attempt has yet been made to introduce responsible government at the centre, the step in that direction having been avowedly confined to the provinces, and as consequently the Executive Government of India remains legally responsible as a whole for the proper fulfilment of its charge to the Secretary of State and Parliament, it follows that the powers conferred

on provincial Governors to disregard an adverse vote of the Legislative Council on legislation or supplies are, as conferred on the Governor-General in his relationship with the Indian Legislature less restricted in their operation than in the provinces—that is to say, they cover the whole field and are not confined to their application to categories of subjects.

THE INDIA OFFICE.

The Act makes no structural changes in the part played by the India Office in the administration of Indian affairs. Slight alterations have been effected in the number and tenure of office of the members of the Secretary of State's Council, and some relaxations have been made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions now exist which will undoubtedly as time goes on have a material effect on the activities of the Office as it is now constituted. A High Commissioner for India has been appointed for the purpose of taking over as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency as distinct from administrative supervision and control. The process of separation of staff and functions for the purpose of this transfer will necessarily be somewhat slow but a substantial beginning has been made by handing over to the direct control of the High Commissioner the large departments which are concerned with the ordering and supply of stores and stationery in England for Government use in India, with the payment of pensions to retired members of Indian services resident in the United Kingdom and with the assistance of

Indian students in England. Concurrently with this change, it is now possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under-Secretary and that portion of the cost of salaries of India Office staff and general maintenance which is attributable to the exercise of its administrative as distinct from purely agency functions.

In due course the apportionment to British estimates will be the cost of the India Office as it exists after the transfer of functions to the High Commissioner has been completely effected, then the salaries of the High Commissioner and his staff will be the only expenses in the United Kingdom chargeable to Indian revenues. Until that time arrives, however an estimate was the only basis for settlement, and for five years from 1920-21 the cost of the India Office payable from British revenues has been fixed at 136,600*l.*, which includes the salaries of the Secretary of State and of the Parliamentary Under-Secretary and a contribution of 40,000*l.*, which has for some years been made by the Treasury towards Indian expenditure, as the result of the recommendations of the Walby Commission.

THE FUTURE.

The Act of 1919 and its provisions are essentially transitional. It is intended, not to set up a new and permanent constitution, but to make such changes in the law as will enable the progressive realisation of responsible Government in British India as an integral part of the Empire. This feature of the Act was clearly expressed in its Preamble but although the Preamble finds no place in the law as amended by the Act of 1919 that law now contains provision for the appointment, after a period of 10 years trial of the law in its amended form, of a Parliamentary Commission

for the purpose of inquiring into the working of the system of government, the growth of education and the development of representative institutions in British India, and matters connected therewith and such a Commission, when appointed is directed to report as to whether it is desirable to establish the principle of responsible government, or to extend, modify or restrict the degree of responsible government then existing in British India.

Statutory Commission appointed. On November 8, 1927 the Prime Minister (Mr. Baldwin) made the following statement in the House of Commons announcing the appointment personnel and programme of the Statutory Commission on Indian Reforms.

As the House will remember one of the provisions contained in the Indian Reforms Act of 1919 required "at the expiration of ten years after the passing of that Act, the

appointment with the concurrence of both Houses of Parliament of persons to be a Commission to inquire into the working of the Indian Constitution and to consider the desirability of establishing extending modifying or restricting the degree of responsible government then existing there. The Government have decided for various reasons which I need not now specify that it is desirable to anticipate the date (December 1929) contemplated by the Act and to appoint this most important Royal Commission forthwith.

Balancing the various considerations and endeavouring to give due weight to each, His Majesty's Government have decided upon the following procedure—

(a) They propose to recommend to His Majesty that the Statutory Commission should be composed as follows—

The Right Hon. Sir John Simon, K.C.V.O.,
K.C. (Chairman)

Vicecount Burnham G.C.M.G., C.H.
Lord Strathcona and Mount Royal.
The Hon. E. C. G. Cadogan, C.B.

The Right Hon. Stephen Walsh. (It was subsequently announced that owing to ill health, Mr. Walsh would be unable to serve and Mr. Vernon Harcourt was nominated in his place.)

Colonel the Right Hon. G. R. Lane-Fox,
Major C. R. Attles.

These names will be submitted to both Houses in Resolutions.

(b) His Majesty's Government cannot, of course, dictate to the Commission what procedure it shall follow but they are of opinion that its task in taking evidence would be greatly facilitated if it were to invite the Central Indian Legislature to appoint a Joint Select Committee chosen from its elected and nominated unofficial members which would draw up its views and proposals in writing and lay them before the Commission for examination in such manner as the latter may decide. The Committee might remain in being for any consultation which the Commission might desire at subsequent stages of the inquiry. It should be clearly understood that the purpose of this suggestion is not to limit the discretion of the Commission in hearing other witnesses.

(c) His Majesty's Government suggest that a similar procedure should be adopted with the Provincial Legislatures.

(d) The vast area to be covered may make it desirable that the task of taking evidence on the more purely administrative questions involved should be undertaken by some other authority which would be in the closest touch with the Commission. His Majesty's Government suggest that the Commission on arrival

in India should consider and decide by what machinery this work may most appropriately be discharged; this will not of course fetter the Commission from the advantage of taking evidence itself upon these subjects to whatever extent it may think desirable.

(e) When the Commission has reported and its report has been examined by the Government of India and His Majesty's Government it will be the duty of the latter to present proposals to Parliament. But it is not the intention of His Majesty's Government to ask Parliament to adopt these proposals without first giving a full opportunity for Indian opinion of different schools to contribute its view upon them. And to this end it is intended to invite Parliament to refer these proposals to consideration by a Joint Committee of both Houses and to facilitate the presentation to that Committee both of the views of the Indian Central Legislature by delegations who will be invited to attend and confer with the Joint Committee and also of the views of any other bodies whom the Joint Parliamentary Committee may desire to consult.

The ante-dating of the Commission involves an amendment of the Act and a Bill to this end will be introduced at once.

PERSONNEL AND PROCEDURE.

The Governor-General and the Executive Members of his Council are appointed by the Crown. No limit of time is specified for their tenure of office but custom has fixed it at five years. There are seven Executive Members of Council. These Members hold respectively the portfolios of Education, Health and Lands, Home, Finance, Commerce, Industries and Labour Law. The Viceroy acts as his own member in charge of Foreign Affairs. Railways are administered by a Chief Commissioner with the assistance of a Railway Board and are for administrative purposes grouped under the aegis of the Commerce Department. The Commander-in-Chief may also be and in practice always is, an Ordinary member of the Council. He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become 'extra ordinary' members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints; in practice it meets only in Delhi and Simla.

In regard to his own Department each Member of Council is largely in the position of a Minister of State and has the final voice in ordinary departmental matters. But any question of special importance, and any matter in which it is proposed to over-rule the views of a Local Government, must ordinarily be referred to the Viceroy. Any matter originating in one department which also affects another must be referred to the latter and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily

once or twice a week—to discuss questions which the Viceroy desires to put before them or which a member who has been over-ruled by the Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each departmental office is in the subordinate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom, but with these differences—that the Secretary is present though does not speak, at Council meetings at which cases under his cognisance are discussed; that he attends on the Viceroy usually once a week, and discusses with him all matters of importance arising in his Department; that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council; and that his tenure of office is usually limited to three years. The Secretaries have under them Deputy, Under and Assistant Secretaries, together with the ordinary clerical establishments. The Secretaries and Under Secretaries are often, though by no means exclusively members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces, or, in the case of Specialists, recruited direct by contract.

THE DIVISION OF FUNCTIONS

The keynote of the scheme is effective provincial autonomy and the establishment of an immediate measure of responsibility in the Provinces all of which are raised to the status

of Governors in Council. This demanded a sharp division between Imperial and Provincial functions. The following subjects are reserved to the Government of India, with the

corollary that all others vest in the Provincial Governments —

1 (a) Defence of India and all matters connected with His Majesty's Naval, Military, and Air Forces in India, or with His Majesty's Indian Marine Service or with any other force raised in India, other than military and armed police wholly maintained by local Governments

(b) Naval and military works and armaments

2. External relations, including naturalisation and aliens, and pilgrimages beyond India.

3. Relations with States in India

4. Political charges.

5. Communications to the extent described under the following heads namely

(a) railway and extra-municipal tramways in so far as they are not classified as provincial subjects under entry 6 (d) of Part II of this Schedule,

(b) aircraft and all matters connected therewith and

(c) inland waterways, to an extent to be declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.

6. Shipping and navigation including shipping and navigation on inland waterways in so far as declared to be a central subject in accordance with entry 6 (c)

7. Light-houses (including their approaches) beacons, lightships and buoys

8. Port quarantine and marine hospitals

9. Ports declared to be major ports by rule made by the Governor-General in Council or by or under legislation by the Indian legislature

10. Posts telegraph and telephones including wireless installations

11. Customs cotton excise duties income tax salt, and other sources of all India revenues

12. Currency and coinage

13. Public debt of India

14. Savings Banks

15. The Indian Audit Department and excluded Audit Departments as defined in rules framed under section 96-D (1) of the Act

16. Civil law, including laws regarding status property civil rights and liabilities and civil procedure

17. Commerce including banking and insurance

18. Trading companies and other associations

19. Control of production supply and distribution of any articles in respect of which control by a central authority is declared by rule made by the Governor-General in Council or by or under legislation by the Indian

legislature to be essential in the public interest

20. Development of industries in cases where such development by a central authority is declared by order of the Governor-General in Council made after consultation with the local Government or local Governments concerned expedient in the public interest.

21. Control of cultivation and manufacture of opium, and sale of opium for export.

22. Stores and stationery both imported and indigenous, required for Imperial Departments

23. Control of petroleum and explosives

24. Geological survey

25. Control of mineral development, in so far as such control is reserved to the Governor-General in Council under rules made or sanctioned by the Secretary of State, and regulation of mines.

26. Botanical Survey

27. Inventions and designs

28. Copyright

29. Emigration from and immigration into British India and inter-provincial migration.

30. Criminal law, including criminal procedure

31. Central police organisation

32. Control of arms and ammunition

33. Central agencies and institutions for research (including observatories) and for professional or technical training or promotion of special studies

34. Ecclesiastical administration including European cemeteries

35. Survey of India.

36. Archaeology

37. Zoological Survey

38. Meteorology

39. Census and statistics.

40. All India services

41. Legislation in regard to any provincial subject in so far as such subject is in Part II of this Schedule stated to be subject to legislation by the Indian legislature, and any powers relating to such subject reserved by legislation to the Governor-General in Council.

42. Territorial changes, other than inter-provincial, and declaration of law in connection therewith

43. Regulation of ceremonial, titles, orders, precedence, and civil uniform.

44. Immovable property acquired by, and maintained at the cost of, the Governor-General in Council

45. The Public Service Commission.

GOVERNMENT OF INDIA.

VICEROY AND GOVERNOR-GENERAL OF INDIA.

His Excellency the Right Hon EDWARD FREDERICK LINDLEY WOOD, Baron IRWIN OF KIRBY
UNDERDALE, O.M.S.I., G.M.L.E., 4th April 1926

(i) Created an Earl June 1911	
(j) During tenure of office the Viceroy is Grand Master and First and Principal Knight of the two Indian Orders (G.C.M.S.I. and G.C.L.E.). On quitting office he becomes G.C.S.I. and G.C.L.E. with the date of his assumption of the Viceroyalty	

The Imperial Legislatures.

The gradual evolution of the Indian constitution is fully traced in the article on "The Government of India," which precedes this, so also are the great changes made by the Reform Act of 1919. For the purposes of easy reference the powers of the Legislatures as well as the special powers reserved to the Governor-General for the discharge of his responsibilities, which are fully set out in the Act are reproduced below—

21. (1) Every Council of States shall continue for five years, and every Legislative Assembly for three years from its first meeting

Provided that—

(a) either chamber of the legislature may be sooner dissolved by the Governor-General and

(b) any such period may be extended by the Governor-General if in special circumstances, he so thinks fit and

(c) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months or with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber

22 (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature and, if any non-official member of either chamber accepts office in the service of the Crown in India his seat in that chamber shall become vacant.

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature and shall have the right of attending in and addressing the other chamber but shall not be a member of both chambers.

24 (3) If any Bill which has been passed by one chamber is not, within six months after the passage of the Bill by that chamber, passed by the other chamber either without amendments or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for decision to a joint sitting of both chambers. Provided that standing orders made under this section may provide for meetings of members of both chambers appointed for the purpose in order to discuss any difference of opinion which has arisen between the two chambers

(4) Without prejudice to the powers of the Governor-General under section sixty-eight of the principal Act, the Governor-General may where a Bill has been passed by both chambers of the Indian legislature return the Bill for reconsideration by either chambers

(7) Subject to the rules and standing orders affecting the chamber there shall be freedom of speech in both chambers of the Indian legislature. No person shall be liable to any proceeding in any court by reason of his speech or vote in either chamber, or by reason of any thing contained in any official report of the proceedings of either chamber

25. INDIAN BUDGET—(1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian legislature in each year

(2) No proposal for the appropriation of any revenue or moneys for any purpose shall be made except on the recommendation of the Governor-General

(3) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration, unless the Governor-General otherwise directs—

(i) interest and sinking fund charges on loans and

(ii) expenditure of which the amount is prescribed by or under any law and

(iii) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council and

(iv) salaries of chief commissioners and judicial commissioners and

(v) expenditure classified by the order of the Governor-General in Council as—

(a) ecclesiastical

(b) political

(c) defence

(4) If any question arises whether any proposed appropriation of revenue or money, does or does not relate to the above heads the decision of the Governor-General on the question shall be final

(5) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to heads or expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, act as if it had been assented to notwithstanding the withholding of such assent or the reduction of the amount therein referred to by the legislative assembly

(8) Notwithstanding anything in this section the Governor-General shall have power in cases of emergency to authorise such expenditure as may, in his opinion be necessary for the safety or tranquillity of British India or any part thereof

26. EXECUTIVE POWERS—(1) Where either chamber of the Indian legislature refuses to introduce or fails to pass in a form recommended by the Governor-General any Bill the Governor-General may certify that the passage of the Bill is essential for the safety, tranquillity or interests of British India or any part thereof, and thereupon—

(a) if the Bill has already been passed by the other chamber the Bill shall on signature by the Governor-General, notwithstanding that it has not been assented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature, or (as the case

may be) in the form recommended by the Governor-General and

(b) If the Bill has not already been so passed the Bill shall be laid before the other chamber, and, if consented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or if not so consented to shall, on signification by the Governor-General become an Act as aforesaid

(3) Every such Act shall be expressed to be made by the Governor-General and shall, as soon as practicable after being made, be laid before both Houses of Parliament and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat and upon the signification of such assent by His Majesty in Council and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor-General may direct that any such Act shall come into operation forthwith and thereupon the Act shall have such force and effect as

aforesaid, subject, however, to disallowance by His Majesty in Council

27 SUPPLEMENTAL PROVISIONS—(1) In addition to the measures referred to in sub-section (2) of section sixty-seven of the principal Act, as requiring the previous sanction of the Governor-General it shall not be lawful without such previous sanction to introduce at any meeting of either chamber of the Indian legislature any measure—

(a) regulating any provincial subject, or any part of a provincial subject, which has not been declared by rules under the principal Act to be subject to legislation by the Indian legislature

(b) repealing or amending any Act of a local legislature

(c) repealing or amending any Act or ordinance made by the Governor-General

(2) Where in either chamber of the Indian legislature any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved, or proposed to be moved, the Governor-General may certify that the Bill or any clause of it or the amendment affects the safety or tranquillity of British India, or any part thereof and may direct that no proceedings or that no further proceedings, shall be taken by the chamber in relation to the Bill, clause, or amendment and effect shall be given to such direction

THE LEGISLATIVE ASSEMBLY

President—The Honourable Mr V J Patel

Marshall—Capt Suraj Singh Bahadur I O M

The Bombay Presidency.

The Bombay Presidency stretches along the west coast of India, from Sind in the North to Kanara in the South. It embraces, with its dependencies and Aden, an area of 187,774 square miles and a population of 26,737,548. Of this total 63,483 square miles are in Native States, with a population of 7,412,341. Geographically included in the Presidency but under the Government of India is the first class Native State of Baroda, with an area of 8,183 square miles and a population of 2,032,798.

With effect from the 10th October 1924 the States in the Cutch, Kathiawar and the Palanpur Agencies have been placed under direct political relations with the Government of India. The three agencies have been combined into one, the Western India States Agency and placed under a first class Resident and Agent to the Governor General with headquarters at Rajkot. The territories under the rule of Indian Princes and Chiefs who are in direct political relations with the Government of Bombay extend now only to an area of about 23,562 sq. miles. The population of these States is about 4 millions and the revenue nearly 6 crores.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency Proper are the high plains of Gujarat watered by the Nerbudda and the Tapi, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract intercepted by creeks which make communication difficult. Then in the far north is Sind, totally different from the Presidency Proper a land of wide and monotonous desert except where irrigation from the Indus has brought abounding fertility.

The People

The population varies as markedly as soil and climate. In Sind Mahomedans predominate Gujarat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions, and a people, who although softened by prosperity are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity the saying goes that the Deccan expects a famine one year in every three and gets it. The population is much more homogeneous than in Gujarat, and thirty per cent. are *Mahrattas*. The Karnatic is the land of the *Lingayots*, a Hindu reforming sect of the twelfth century and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindhi, Gujarati, Marathi and Kanarese, with Urdu a rough *Nepes* *franca* where English has not penetrated. The main castes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Sind the soils are wholly alluvial and under the influence of irrigation produce yearly increasing crops of wheat and cotton. In Gujarat they are of two classes, the black cotton soil, which yields the famous *Brooch* cottons, the finest in India, and alluvial

which under careful cultivation in Ahmedabad and Kaira makes splendid garden seed. The dominant soil characteristic of the Deccan is black soil, which produces cotton wheat gram and millet, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grows under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Brooch as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by wellirrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague during the past twenty years. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry has induced a considerable rise in the standard of living. The land is held on what is known as the *ryotwari* tenure that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures.

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small and is confined to building stone, salt extracted from the sea and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright coloured saris, and to a diminishing extent the exquisite *kinobas* of Ahmedabad and Surat. Bombay silver ware has a place of its own, as well as the brass work of Poona and Nasik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city Bombay.

Number of Looms in Bombay Island	78,701
Number of Spindles in Bombay Island	3,472,642
Number of hands employed in the Textile Industry in Bombay Island	149,069
Consumption of Cotton by the Mills in Bombay Island (bales)	
Candies of 784 lbs each	
Number of Spindles in Ahmedabad	1,381,897
Number of Looms in Ahmedabad	29,401
Number of Spindles in Sholapore	289,432
Number of Looms in Sholapore	5,321
Number of Spindles in the Bombay Presidency (excluding Bombay Island)	2,418,407
Number of Looms in the Bombay Presidency (excluding Bombay Island)	48,408

Great impetus has been given to Bombay industries by the provision of electric power generated fifty miles away on the Ghats, and the year 1919 witnessed a phenomenal notation of new industrial companies of almost every description.

The situation of Bombay on the western sea-board in touch at once with the principal markets of India and the markets of the West

has given Bombay an immense sea-borne trade. The older ports, Surat, Broach, Cambay and Mandvi, were famous in the ancient days, and their bold and hardy seafarers carried Indian commerce to the Persian Gulf and the coasts of Africa. But the opening of the Suez Canal and the increasing size of ocean steamers have tended to concentrate it in modern ports with deep water anchorages, and the sea-borne trade of the Presidency is now concentrated at Bombay and Karachi although attempts are being made to develop Mormugao in Portuguese territory into an outlet for the trade of the Southern Mahratta Country.

Administration.

The Presidency is administered by a Governor and an Executive Council of four members with the assistance of three Ministers. The exact change made in the functions of the Provincial Governments is indicated in the section on the Provincial Governments (p. 6) where a description is given of the division of the administration into two branches: the Reserved Subjects administered by the Governor and his Council and the Transferred Subjects administered by the Governor and his Ministers, the whole Government commonly meeting and acting as one. In another part of this section the division between Reserved and Transferred subjects is shown. This new form of administration under the Reform Act of 1919 came into operation in January 1921. All papers relating to public service business reach Government through the Secretariat, divided into seven main departments, each under a Secretary: (a) Finance, (b) Revenue, (c) Home and Ecclesiastical, (d) Political, (e) General Educational and Marine, (f) Legal, (g) Public Works. The senior of the Civilian Secretaries is entitled the Chief Secretary. The Government frequently moves. It is in Bombay from November to the end of March, at Mahabaleshwar from April to June, in Poona from June to November but the Secretariat is always in Bombay. Under the Governor-in-Council the Presidency is administered by four Commissioners. The Commissioner in Sind has considerable independent powers. In the Presidency Proper there are Commissioners for the Northern Division with headquarters at Ahmedabad, the Central Division at Poona, and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian who has under him one or more Civilian or Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patil, who is the head of the village both for revenue and police purposes, the kulkarni or kulkarni, clerk and accountant, the messenger and the watchman. Over each Taluka or group of villages is the munsifdar who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions. The control of the Government over the Native States of the Presidency is exercised through Political Agents.

Justice

The administration of justice is entrusted to the High Court sitting in Bombay and comprising a Chief Justice, who is a barrister, and seven puisne judges, either Civilian, Barristers, or Indian lawyers. In Sind the Court of the Judicial Commissioner (The Judicial Commissioner and four Additional Judges) is the highest court of civil and criminal appeal. The growing importance of Karachi and Sindh has, however necessitated the raising of the status of the Judicial Commissioner's Court and the passing of the Sind Courts Act in August, 1920 which contemplates the creation of a Chief Court for Sind with a Chief Judge and three or more Puisne Judges. The Act however has not yet been put into effect owing to financial difficulties. Of the lower civil courts the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilian, or members of the Provincial Service. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Presidency but original criminal work is chiefly disposed of by the Executive District Officers. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction. (Bombay has five Presidency Magistrates as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes corresponding to the English County Courts.

Local Government

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll and ferry funds. The tendency of recent years has been to increase the elective and reduce the nominated element to allow these bodies to elect their own chairmen, whilst larger grants have been made from the general revenue for water supply and drainage.

The City Municipalities Act of 1926 works further advance in the matter of local self Government in the Presidency. The Act provides more adequate basis for Municipal Administration in the larger cities of the Bombay Presidency. The larger municipalities are now styled as Municipal Boroughs which are now 29 in number. The executives of these Borough Municipalities are invested with larger powers than hitherto exercised. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings.

or buildings with annual rental values of Rs 12 or with capital value of not less than Rs. 200

Public Works.

The Public Works Department is under the control of two Chief Engineers who act as Secretaries to the Government one for General Works and the other for Irrigation. Under them are Superintending Engineers in charge of divisions and Executive Engineers in charge of districts, with the Consulting Architect. The chief irrigation works are in Sind and consist of a chain of canals fed by the annual inundations from the Indus and one perennial canal the Jamrao. The Sukkur Barrage project which was inaugurated in 1923 is the greatest irrigation scheme in the world and is designed to ensure the vast areas of fertile land in Sind a regular and constant supply of water. It will enable 6,000,000 acres of crops to be irrigated annually i.e. over 500,000 acres more than the total area irrigated in Egypt. The scheme is not only vital to the future of Sind but of indirect benefit to the whole of India. The whole scheme is estimated to cost over 3½ million sterling or over 15 crores of rupees. In the Presidency proper the principal protective works are the Nera Canal, Gokak Canal, Mutha Canal and the Godavari Canal Scheme. In addition there is under construction a chain of protective irrigation works, originating in rivers in the Ghât regions. The Godavari canals were completed during the year 1917-18 and the two most important projects, namely, the Nera Right Bank Canal and the Pravara River Works system, which have been under construction since 1912 and 1911. The Bandharam dam, the second highest yet constructed by Engineers the world over belonging to latter group was opened by His Excellency the Governor on 16th December 1925. These projects will irrigate certain tracts most liable to famine

Police.

The Police Force is divided into 3 categories, viz., District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Presidency proper are for the purpose of control under the Inspector General of Police who is assisted by three Deputy Inspectors-General of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. District and Railway Police in Sind are under the Deputy Inspector-General of Police for Sind subject to the control of the Commissioner-in-Sind. The executive management of the Police in each district and on Railways in the Presidency proper as well as in Sind is vested in a Superintendent of Police in a District under the general direction of the Magistrate of the District concerned. For the purpose of effective supervision over the investigation and prevention of crime some of the larger districts are divided into one or more Sub-Divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police or a Deputy Superintendent of Police. Inspectors are usually placed in charge of Districts comprising two or more Police Stations. Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law for the investigation of offences

reported at their Police Stations. On appointment Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

Education.

Education is imparted partly through direct Government agency, partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Poona, Gujarat and Dharwar, the Grant Medical College, the Poona College of Engineering, the Agricultural College, Veterinary College, School of Art, Law School and a College of Commerce. The Royal Institute of Science is now open in Bombay. Most of the secondary schools are in private hands the majority of the primary schools are maintained by District and Local Boards with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City (q.v. Education).

The passing of the Primary Education Act in 1923 was perhaps the most important event in the history of Primary Education in the Presidency during the last 30 or 40 years. The Act provides for the definite handing over of the management of primary schools to local bodies subject to the general supervision of Government. It further gives Government the power of calling upon local authorities to prepare schemes for the introduction of compulsory education if they fail to do so of their own initiative. For various reasons there was delay in bringing the Act into operation. Since 1925 twenty-two out of twenty-seven District Local Boards have taken over control of primary education. Four District Local Boards in the N. D. and one in Sind have yet to take over the control. Fifty out of 156 Municipalities also manage their schools under the Act. Compulsory education for boys continues to be in force in five Municipalities: Bandra, Satra, City, Dhule, Surat and Baysadgi. The Bombay Municipality has introduced compulsion in two Wards (F & G) for both boys and girls excepting Moslem girls.

The Educational Department is administered by a Director with an Inspector in each Division and a Deputy Inspector with Assistants in each district. Higher education is controlled by the Bombay University (established in 1857) consisting of the Chancellor (the Governor of the Presidency), the Vice-Chancellor appointed by Government for two years and 100 Fellows of whom 10 are ex-officio, 10 elected by the Graduates, 10 by the Faculties, and 50 are nominated by the Chancellor.

Proposals have been recently put forward by the Committee on University Reform for the reorganization of the University on sounder lines but these are still under the consideration of the authorities. A Bill to amend the University Act is before the Legislature.

The principal educational institutions are:—
Government Arts College—

Mipkinstone College, Bombay, Principal,
Mr H. Handil M.A.

Deccan College, Poona, Principal, Mr H. G. Rawlinson, M.A.

Gujarat College, Ahmedabad, Principal G. Maday Shiras M.A. F.R.S. (Ong)

Karnatak College, Dharwar, Principal, Mr H. V. Hampton M.A.

Practical Arts Colleges—

St. Xavier's, Bombay (Society of Jesus) Principal Rev Father Durr S. J.

Wilson College Bombay (Scottish Mission), Principal Rev J. Mackenzie M.A.

Fergusson College Poona (Deccan Educational Society), Principal K. E. Kanitkar M.A. B.Sc.

Baroda College, Baroda (Baroda State) Principal B. G. Barrow B.Sc.

Samaldas College, Bhavnagar (Bhavnagar State), Principal Mr T. K. Shahani, M.A.

Bahadurpuri College, Jannagadh State Principal, Mr S. H. Hodivala M.A.

Special Colleges—

Grant Medical College Bombay (Government) Dean, Captain S. L. Bhatia M.S.

College of Engineering, Poona (Government) Principal, Mr W. L. C. Trench.

Agricultural College Poona (Government) Principal, Dr William Burns

Chiefs College, Rajkot Principal Mr J. T. Turner

College of Science, Ahmedabad Law College, Bombay Principal Dr J. B. Khargamvala, LL.D. (London)

College of Commerce Bombay Principal Mr M. L. Tannan

Veterinary College Bombay Mr K. Hewlett

Haffkine Institute, Bombay, Director Lt Col F. P. Mackie M.S.

Sir J. S. School of Art Bombay (Government) Principal Mr W. E. G. Solomon

Victoria Technical Institute Bombay Principal, Mr A. J. Turner, B.Sc. F.L.C.

Medical

The Medical Department is in the charge of the Surgeon-General and Sanitation in that of the Director of Public Health, both members of the Indian Medical Service. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district whilst sanitation is entrusted to one of the Assistant Directors of Public Health. Three large hospitals are maintained by the Government in Bombay and arrangements are being made to increase the hospital accommodation in the City. It is hoped to set up in the near future not less than 850 additional beds in the various hospitals of the city. Well-equipped hospitals exist in all important up-country stations. Over three million persons including 51,000 in-patients are treated annually. The Presidency contains 6 Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is carried out by a staff under the direction of the Director of Public Health. Sanitary work has received an immense stimulus from the large grants made by the Government from time to time.

Finance

Under the Reform Scheme of 1919 Provincial Finance entered on a new phase. Before the passing of this Act Provincial finance was incorporated in Imperial Finance. The Province had certain heads of revenue of their own and other heads which they divided with the Government of India. By the new constitution a comparatively clean cut was made between the finances of the Government of India and those of the Provinces. Such revenues as they enjoy the Provinces enjoy in full and in return they make cash contributions to the Government of India, fixed for a term of years. The general principle underlying this settlement is that those contributions shall gradually disappear. The present contribution of the Government of Bombay is Rs. 56 lakhs.

Estimated Revenue for 1927-28.

PRINCIPAL HEADS OF REVENUE		Rs.
V Land Revenue		5 50 00 000

The Madras Presidency.

The Madras Presidency occupies the whole southern portion of the Peninsula and, excluding the Native States most of which have now come under the direct control of the Government of India, has an area of 141,075 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,200 miles on the west, on the Arabian Sea a coast line of about 460 miles. In all this extent of the coast however, there is not a single natural harbour of any importance the ports with the exception of Madras and perhaps of Cochin are merely open roadsteads. A plateau, varying in height above sea-level from about 100 to about 800 feet and stretching northwards from the Nilgiri Hills occupies the central area of the Presidency on either side are the Eastern and the Western Ghats which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rain fall. Where the chain is high the intercepted rain-clouds give a heavy fall, which may amount to 180 inches on the seaward side but comparatively little rain falls on the landward side of the range. Where the chain is low rain-clouds are not checked in their westward course. In the central tableland and on the east coast the rainfall is small and the heat in summer excessive. The rivers which flow from west to east in their earlier course drain rather than irrigate the country but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east-coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency was returned at the census of 1921 as 42,794,155 an increase over the figure of 1911 of 2.2 per cent. The tendency has been for the more densely populated portions of the province to increase their numbers whilst the sparsely inhabited tracts have still further declined in density. Hindus account for 89 per cent of the population Mahomedans for 7 Christians for 3 Animists for 1. The vast majority of the population is of the Dravidian race and the principal Dravidian languages Tamil and Telugu, are spoken by 18 and 16 million persons respectively. Of every thousand people 410 speak Tamil, 377 speak Telugu 75 Malayalam 37 Oriya 35 Canarese and 23 Hindustani.

Government.

The Madras Presidency is governed on the system generally similar to that obtaining in Bombay and Bengal. There are associated with the Governor four members of the Executive Council in charge of the Reserved Subjects and three Ministers in charge of the Transferred Subjects. Madras administration differs however, in some important respects from that of other major provinces. There is no intermediate local authority between the Collector of the District and the authorities at head quarters. Commissioners of Divisions being unknown in Madras. Another feature peculiar to the Southern Presidency is the manner of choice of the ministers. Following the practice of the Mother of Parliaments, Madras Governors have, even since the inception of the Reforms, called upon the leader of the dominant party to

form a ministry giving him freedom to select his colleagues on the ministry. Consequently he enjoys the status of Chief Minister—unknown in other provinces in India.

Agriculture and Industries.

The principal industry of the province is agriculture in which 68 per cent of the population is engaged. The principal food crops are rice, cholam, ragi and kambu. The industrial crops are cotton, sugar cane and groundnuts. Agricultural education is rapidly progressing in the Presidency with a well known college at Coimbatore with classes for juvenile and adult labourers attached to it, two agricultural middle schools and numerous demonstration farms. While paddy which is the staple food of the population occupies the largest cultivable area, cotton is by no means an inconsiderable crop of the province and is receiving close attention at the hands of local agricultural authorities. The area under cotton is estimated at 2,380,100 acres and as in the case of paddy efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. Side by side with an increase in the area under cotton there has been a strict exclusion of inferior cotton from existing good staple areas, while improved varieties have been systematically introduced. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up controlling substantially to the economic development of the province. They have organised themselves as a registered body under the title of The United Planters Association of South India on which are represented the coffee, tea, rubber and a few other minor planting products. There are some 22 cotton mills in the Presidency which employ 35,000 operatives. Minor industrial concerns number over 120 and consist of oil mills, rope, rubber and tile works. Tanning is one of the principal industries of the Presidency and there is considerable export trade in skins and hides although hide tanners have not been doing well of late. The manufacturing activities which are at present under the direction of the Department of Industries are mainly confined to the production of soap, ink, jam and preserves. The match-making industry is just raising its head in Madras. Early last year the Council complied with a demand made by the minister in charge of Industries for funds for appointing a special officer to conduct an exhaustive survey of the existing and potential cottage industries in the Presidency. The aggregate value of the sea-borne trade of the Presidency has been showing a steady increase and is now in the neighbourhood of Rs. 20 crores per annum. As in other provinces, the forest resources are exploited by Government. There are close upon 19,000 square miles of reserved forests.

Education.

The Presidency's record in the sphere of education has been one of continuous progress. There are at present about 40,000 public institutions ranging from village primary schools to arts and professional colleges, their total strength being 2,000,000. Special efforts are being made to provide education for boys belonging to the Depressed Classes. The Council passed a resolution in the past year at

the instance of an elected member that poor girls reading in any educational institution in the province—Government, local fund, Municipal or aided—should be exempted from School fees in any Standard up to III Form. The total expenditure of the province in Education is in the neighbourhood of Rs. 340 lakhs. The principal educational institutions in the province are the Presidency College, the Christian College and Pachaiyappa's College, Madras; the St. Joseph's College, Trichinopoly; the Government College, Kumbakonam; the Government College, Rajamundry; the Maharaja's College, Trivandrum; the Agricultural College, Coimbatore; and the Medical and the Engineering Colleges at Madras.

Cochin Harbour Scheme

The Government of Madras and the authorities of the Cochin and Travancore States have come to an agreement regarding the financing of the Cochin Harbour scheme. The importance of this project lies in the fact that a good harbour at Cochin would lead to the development of a valuable hinterland which is at present far removed from any convenient port. The scheme is to cut a passage through the bar which blocks the entrance from the sea to an extensive backwater. A trial cut was made in 1923 and the effect of the monsoon thereon observed. The results recorded were examined by a committee of Harbour Engineers in England which reported favourably on the prospects of the scheme. The plant necessary for effecting a deeper and wider cut has been secured and the work is in progress. Everything had been prepared at Cochin for proceeding with the major works and with the arrival of the dredger and the pipe line on the lines of the Borsley plant work is progressing rapidly. If access through the bar can be established at all periods of the year a portion of the backwater will be dredged to afford anchorage for ocean going steamers.

Vizagapatam Harbour Project.

Even more pregnant with future possibilities is the scheme for the development of the Vizagapatam harbour. Proposals for the development of the port at this place have been under consideration since 1859 but the success of the project is bound up with the construction of direct railway communication between Vizagapatam and the Central Provinces for the quantity of trade which could be obtained from the littoral itself is insufficient to justify the capital expenditure which would be required. In May 1925 the Government of India declared Vizagapatam a major port thereby enabling the development of the port under the directions of the Central Government. Preliminary operations commenced in the end of the year and were continued vigorously in 1926 with the aid of dredgers and rock breakers. It is expected that the construction of the harbour will take four or five years. The surrounding hill-sides and adjacent areas will meanwhile be developed for industrial, trading and residential purposes.

Local Self-Government.

As in Bombay, the Madras District Municipalities and Local Boards Act has been amended in various directions, all of which tend towards liberalisation. More recently legislation has been passed permitting the esta-

blishment of Village Panchayats or Committees of Elders. Over 500 Panchayats have come into existence in the Presidency. Generally speaking the Local Boards in Madras display a courageous disposition to levy taxes up to the sanctioned maximum. Even then many of them are unable to make both ends meet.

Irrigation

In March 1925 the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounts to £4 millions. The project has been framed with two main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres; the second is to extend irrigation to a new area of 801,000 acres which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme which is expected to be completed before 1933 provides for a large dam at Mettur on the Cauvery to store 90,000 million cubic feet of water and for a canal nearly 33 miles long with a connected distributary system. Another important project is the Periyar project which is intended not only for irrigation purposes but also for providing water power for generating electricity. Taking its rise in the Western Ghats the river flows into the Arabian Sea through Travancore State territory. After prolonged negotiations the Travancore Durbar consented to the water being caught and stored in the Travancore hills for being diverted towards the East. Some three thousand feet above sea level a concrete and masonry dam has been constructed and nearly 60 feet below the crest-level of the dam a channel through the summit of the range carries the waters into the eastern watershed where they are led into the river Vaigai. The total quantity of water impounded to crest level is 15,600 million cubic feet. By this work a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal irrigating in its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 142,749 acres, while the supply from the lake was sufficient only for 130,000 acres. To make up for this deficit Government contemplate increasing the effective capacity of the lake by lowering the water-shed cutting at an estimated cost of Rs. 2½ lakhs. The area already under irrigation in the Madras Presidency totals 7 million acres. Of this, over 3 million acres are served by petty irrigation works numbering about 35,000.

Electric Schemes

Of the major schemes that have been receiving Government's attention a hydro-electric undertaking whose details are expected to be announced in the near future, is by far the most important. The protracted negotiations regarding the purchase by the Madras Government of what is known as the Pykara cascades, which includes a huge and powerful water-fall have concluded and it has been decided to work the scheme as a government venture. It has indeed been publicly announced that Government do not propose to hand over either this water fall or any other source of water power to any private syndicate for development. A member of the American Institute of Electrical Engineers with wide experience of big hydro-electric

schemes in Canada has been appointed for five years to be in the charge of the Pykharu Scheme. A proposal to electrify some portions at least of the railways in South India is also under the consideration of the Government. The increasing number of electric supply undertakings throughout the Presidency has necessitated the construction of an up-to-date electric testing laboratory for the electrical inspector to Government at a cost of nearly Rs. six lakhs.

Co-operation

The progress made by the Co-operative Department both in the formation of new societies and the development of those registered in previous years has been very satisfactory. There was a large increase during the year in the number of members and in the amount of share capital of working capital and of reserve fund. The steadily increasing efficiency of many of the local supervising unions gave evidence of the success of the policy adopted by Government of transferring within statutory limits the control of primary societies to non-official organisations wherever such a course was practicable. Some noteworthy features of the Co-operative movement during the year were the increased activities of the building societies stimulated by financial help from Government, a marked development in the organisation of labour societies and an increase in the number of societies formed by cultivators to enable them to hold up their crops for a favourable market and for the joint sale of their produce. The co-operative movement also made satisfactory progress among the depressed classes during the year. A Committee was appointed to inquire into the progress of the Co-operative movement and suggest in what ways and on what lines the movement may be still further carried on.

Social Legislation

An advance piece of social legislation which has caused considerable excitement in the Presidency is the Hindu Religious Endowments Act. It has for its object the regulation of the great endowments of certain religious institutions such as Hindu temples. The profits are applied under State control to benevolent activities mostly educational. The measure entailed a considerable amount of correspondence with the Government of Madras. The Governor of Madras found himself unable to assent to the Bill as originally passed and returned it for re-consideration recommending certain amendments which the Council accepted. The Act came into force last year and has been working satisfactorily notwithstanding the obstacles placed in its

way by the orthodox section of the Hindu community. The latter are striving their utmost to put technical and other obstacles in the way of its smooth working and are making much of the suggestion thrown out by the Governor General while giving his assent to the Bill namely that some of its defects might be remedied in the light of experience. Another piece of legislation—a non-official Bill—which has raised a heated controversy is the Malabar Tenancy Bill which aims to confer subject to certain conditions occupancy rights on kanom tenants and actual cultivators of the soil. As there was a sharp difference of opinion on the very principles of the Bill and as it was thought that the landlords would be hard hit by it the Governor has withheld his assent. A Committee has been appointed to go into the matter thoroughly and its findings are awaited. Meanwhile the Madras Legislative Council has carried an adjournment motion protesting against the personnel of the Committee. Noteworthy among other efforts at legislation for social reform was the non-official resolution passed by the Council recommending to Government to undertake legislation or to ask the Government of India to do so to put a stop to the practice of dedicating young women and girls to Hindu temples for immoral purposes under the pretext of caste, custom or religion. It was also resolved to ask Government to fix as their goal local prohibition of drink in the presidency within 20 years.

Law and Order

The Superior Court or Civil and Criminal Judicial work in the Presidency is the High Court at Madras which consists of a Chief Justice and eleven puisne Judges. The existing law provides for a maximum of 20 High Court Judges. For the administration of criminal justice there are 25 Session Judges in the mofussil. Additional and Assistant Session Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrates, the Subordinate Magistrate and Honorary Magistrates. The administration of civil justice is carried on by 24 District Judges, 20 Subordinate Judges and District Munsifs. In the Presidency Town there are a City Civil Court consisting of one Judge and Small Causes Court consisting of a Chief Judge and two other Judges. Madras is a litigious province and the records show one suit for every 85 persons. The Police department is under an Inspector General who has four deputies in four ranges of the Presidency a Superintendent being stationed at each District. The sanctioned strength of the permanent police force is about 30,000.

The Presidency of Bengal, as constituted on the 1st April 1912, comprises the Burdwan and Presidency divisions and the district of Darjeeling which were formerly administered by the Lieutenant-Governor of Bengal; and the Rajshahi, Dacca and Chittagong divisions which by the partition of the old Province had been placed under the administration of the Lieutenant-Governor of Eastern Bengal and Assam. The area of the Presidency is 82,277 square miles, and it possesses a population of 47,592,452 persons included within this area are the two Indian States of Cooch Behar and Tripura which are now placed in direct political relations with the Government of India. The Governor of Bengal in Council acts as Agent to the Governor-General of India for these States. The area of the British territory is 76,843 square miles. Bengal comprises the lower valleys and deltas of the Ganges and Brahmaputra, and in the main consists of a great alluvial plain intersected in its southern portion by innumerable waterways. In the north are the Himalayan mountains and submontane tracts of Darjeeling and Jalpaiguri, and on the south-east the hills in Tripura and Chittagong while on the west the Chota Nagpur plateau is continued by an undulating tract running through the western portions of Midnapur, Bankura, Burdwan and Birbhum. The general range of the country however is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which lie between the area of cultivation and the Bay of Bengal.

The People

Of the inhabitants of the Presidency 25,496,124 or 53.55 per cent. are Mahomedans and 20,809,148 Hindus. These two major religions embrace all, but 2.73 per cent of the population. Christians, Buddhists and Animists combined number 1,273,873.

Bengali is spoken by ninety two per cent. of the population of the Presidency and Hindi and Urdu by 3.8 per cent. The Oriya speaking people number 298,372 and Nepali is the tongue of 93,060 persons principally residents in the Darjeeling and Jalpaiguri districts. The great majority of the speakers of the Munda languages are Santals in West and North Bengal.

Industries.

According to the returns of the Census of 1921 nearly 87 millions or over 77 per cent. of the population derive their support from pasture and agriculture, and of these more than 804 millions are cultivators, and more than 47 millions farm servants and field labourers. The area under jute in 1926 is estimated at 2,562,926 acres against 2,390,103 in 1924. Bengal is the most important rice-producing area in Northern India, and it is computed that about 85 per cent. of the cultivated area of the Presidency is devoted to its production. Other crops include barley, wheat, pulses and oil-seeds, the area devoted to the last named in 1924 being 1,040,000 acres. Sugar is produced both from the sugar-cane and from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal. The area under tea in 1924 was 181,332 acres. There were 327 plantations employing a daily average of 148,320 permanent and 9,574 temporary hands.

Manufacture and Trade.

The main industries in this part of India in addition to the agricultural industry are the jute mill industry, the tea industry (largely in Assam in density) and coal mining. The jute mills in and around Calcutta constitute the principal manufacturing industry of the Presidency. From 1st April to 31st December 1921 all jute mills worked four days per week. From 1st January to 31st March 1922, multiple shift mills worked four days of 13½ hours each per week, single shift mills five days per week, namely four days of 11 hours each and one day of 10 hours. There were 85 mills at work during the year 1924-25 with 49,780 looms and 1,055,321 spindles. The average number of persons employed daily was 8,36,936. The labour supply of mills during the year has been fair, but there have been many days lost through strikes at different mills. The value of the exports of Raw Jute by sea from Calcutta during 1925-26 increased from Rs. 27.45 lakhs to Rs. 65.99 lakhs. The quantity imported was less than in the preceding year by 45,400 tons and amounted to 615,500 tons. The Jute cess benefited the Calcutta Improvement Trust to the extent of Rs. 10.44 lakhs, while Rs. 9.72 lakhs were collected in the preceding year. The exports of raw and manufactured Jute represented more than half of Calcutta's exports during 1925-26 and those with the exception of cotton were India's premier exports in that year. Other principal industries were cotton twist and yarn, silk yarn and cloth, hand made cloth, sugar molasses and paper. Eleven cotton mills were at work during 1924-25 employing daily on an average 12,000 persons. The silk weaving industry continues to decline. There was only one silk mill working during 1924-25 which employed 130 hands. The manufacture of tea is carried on an extensive scale in Darjeeling and Jalpaiguri. The capital employed by joint stock companies in the industry in India amounted to Rs. 84 crores and about 21 million pounds sterling and the daily average labour force to 811,595 during 1924. In 1925 the number of coal mines under the scope of the Indian Mines Act worked in Bengal was 124. The total output for Bengal was 4,918,852 tons against 5,031,655 tons raised in 1924 while the output of all the mines in Bengal, Bihar and Orissa, and Assam amounted to 18,862,861 tons. The paid up capital of joint stock coal companies only in the industry employed in these provinces is approximately Rs. 10.81 lakhs. Three paper mills produced 21,618 tons of paper valued at Rs. 1,22,24,040 in 1923.

In 1925-26 the foreign sea borne trade of Bengal (excluding treasure but including Government stores) amounted to Rs. 238 crores of which 84 crores represented imports and Rs. 154 crores exports. Of the total foreign trade of Bengal, 94 per cent. was the share of Calcutta. The six chief exports from Bengal are in order of importance jute (raw and manufactured), tea, lac, hides and skins (raw seeds, grain (pulse and flour) and the six leading imports are cotton goods, metals and ores, sugar, machinery and millwork, railway plant and rolling stock, and oils.

Administration

The present form of administration in Bengal dates from January 1821. In 1812 the Government of the Province underwent an important change, when in accordance with the Proclamation of His Majesty the King-Empress at Delhi the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1821 under the Reform Scheme the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There are normally four members of the Executive Council, who are in charge of the reserved subjects, and three Ministers who are in charge of the transferred subjects, but in 1924 owing to political reasons there were only two Ministers, and these had to resign owing to the refusal of the Legislative Council to vote their salaries. On their resignation the transferred subjects were carried on by the members of the Executive Council. Two ministers were appointed by H. F. the Governor in March 1925 for the administration of the transferred subjects, but owing to the refusal of the Legislative Council to vote their salaries they resigned their offices in the same month. The administration of transferred subjects was then upon assumed by H. K. the Governor of Bengal and subsequently the Secretary of State ordered the suspension of transfer of all transferred subjects in Bengal until the 21st January 1927. In the course of 1927 two Ministers were again appointed. This time the salaries were voted by a small majority and the administration is thus being carried on as originally intended.

Bengal is administered by five Commissioners the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are in their turn subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

Justice

The administration of Justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 16 Patna Judges including two additional judges who are Barristers, Civilian or Vakils. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsifs. Of these officers, the District and Additional Judges and a certain number of subordinate Judges are also endowed with the power of a Criminal Court while the remainder have jurisdiction in Civil matters only. Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates.

On its appellate side, the High Court disposes of appeals from the order of a Court of Session and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has five Presidency Magistrates including a Temporary Magistrate, two Municipal Magistrates and also a number of Honorary Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

Local Self-Government

By Bengal Act III of 1884 which regulates municipal bodies in the interior and its subsequent amendments the powers of Commissioners of municipalities have been increased and the elective franchise has been extended. Municipal expenditure now comprises a large number of objects, including veterinary institutions, employment of Health Officers and Sanitary Inspectors and the training and employment of female medical practitioners. The Commissioners also have large powers in regard to the water supply and the regulation of buildings. The municipal Government of Calcutta is governed by Act III of 1923. This Act which replaced Act III of 1899 makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer and Deputy Executive Officers all elected by the Corporation. The appointment of the Chief Executive Officer is subject to the approval of Government. The total number of councillors is 85 with 555 men elected by the councillors. Ten of the councillors are nominated by Government and by the general or special constituencies. There are separate constituencies for Mahomedans. In order to improve the insanitary and congested areas of the city the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, District and Local Boards exercise considerable powers with regard to Public Works, Education and Medical relief and Union Committees have been formed which deal for the most part with the control of village roads, sanitation and water-supply.

Bengal Act V of 1919 introduced the new system of self government by a creation of village authorities vested with the power and duties necessary for the management of communal village affairs and entrusted with powers of self taxation. The new village authority to be called the Union Board will replace the existing *Chaukidari pancheayats* and the Union Committee and will deal with the village police, village roads, water supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the Union Boards Village Benches and Courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all districts in the Presidency except Darjeeling, Chittagong, and Malda and in 1925 over 2,000 Union Boards were sanctioned, of which nearly 1,400 were actually constituted.

Public Works.

The Public Works Department is under the charge of a Chief Engineer who is also the Secretary to Government in the P W and Railway Departments.

The P W D deals with questions regarding the construction of public buildings and roads.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways the alignment of new lines of Railways and with Tramway projects.

Irrigation.

The Irrigation Department deals with irrigation, navigation flood protection by means of embankments and drainage the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

Marine

The Marine Department deals with all questions connected with the Bengal Pilot Service merchant shipping the administration of ports and inland navigation.

Police

The Bengal Police force comprises the Military Police, the District Police the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector General of Police the present Inspector General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General, for the Dacca Range the Rajshahi range the Presidency range, the Burdwan range and the Bakarganj range and also one Deputy Inspector-General in charge of the C I D and the Intelligence Branch. Each district is in charge of a Superintendent, and some of the more important districts have an Additional Superintendent. The Railway Police is divided into three distinct charges each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. There is also a Village Police composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. There is a training college and school at Sardah, in the district of Rajshahi where newly appointed gazetted officers and constables of the Bengal police learn their duties. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 134 lakhs.

Medical.

The head of the Medical Department is the Surgeon-General with the Government of Bengal, and Sanitation is in charge of the Director of Public Health the former appoint-

ment is always held by a member of the Indian Medical Service while the latter post is not so reserved. There is also a Chief Engineer Public Health Department Bengal. In the districts the Civil Surgeons are responsible for medical work. There are 6 hospitals in Calcutta 10 of which are supported by the Government and 418 019 persons were treated at these institutions of whom 40 775 were in-patients. In the mofussil districts there are 914 hospitals and dispensaries the number of patients treated in them was 7 082 803 including 61 975 in patients.

Education.

In the Presidency of Bengal education is imparted partly through Government Agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains three Arts Colleges in Calcutta (of which one is a college for women and one the Sanskrit College) one at Hughli one at Krishnagar three at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English and 3 normal schools one in each division for the training of teachers in secondary schools through the medium of the vernacular also an engineering college at Silpur and an engineering school at Dacca, two medical colleges, a veterinary college, a school of art and a commercial school in Calcutta and a weaving school at Serampore. It also provides at the headquarters of all districts, except Burdwan and Midnapore and also at certain other mofussil centres, English high schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are four Government high schools for boys, two of which are attached to the Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh, and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards are under private control. The administration of primary education in all areas, which are not under municipalities rests with the district boards grants being given from provincial revenues to the boards which contribute only aliguity from their own funds. Only in backward localities are such schools either entirely managed, or directly aided by Government. Apart from the institutions referred to above, 25 institutions called Guru Training Schools are maintained by the Department for the training of primary school teachers. For the education of Mahomedans, here are senior madrasahs at Calcutta, Dacca, Chittagong and Hughli and one junior madrasah at Rajshahi which are managed by Government. There are also certain Government institutions for technical and industrial education. All institutions for technical and industrial education (except B. N. College, the Alumnidhah School of Engineering Dacca the Government Commercial Institute and the Government School of Art, Calcutta) are now under the control of the Director of Industries. A large proportion of educational

work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a high school at Burdwan, a high school at Santipur and a high school at Chittagong.

In 1926-27 there were in the Presidency —

RECOGNISED INSTITUTIONS FOR MALES

	Institutions	Scholars
Universities	2	1 621
Arts Colleges	38	24,122
Professional Colleges	16	7 001
High Schools	908	255 851
Middle Schools	1 670	144 109
Primary Schools	37,221	1 353 674
Special Schools	2,745	97 001

RECOGNISED INSTITUTIONS FOR FEMALES

	Institutions	Scholars
Arts Colleges	4	301
Professional Colleges	3	62
High Schools	39	8,301
Middle Schools	76	8,991
Primary Schools	18,922	841 601
Special Schools	44	1,528

UNRECOGNISED SCHOOLS

	Males	Females
Males	1 175	43,247
Females	254	6,583

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director and an Assistant Director for Muhammadan Education. Each division is in charge of a Divisional Inspector assisted by a

certain number of Additional or Second Inspectors and Assistant Inspectors for Muhammadan Education according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. Higher education is controlled by the Universities of Calcutta and Dacca established in 1857 and 1921, respectively administered by the Chancellor (the Governor of Bengal) the Vice Chancellor (appointed by Government) and a number of ex officio elected and nominated fellows. The University of Calcutta maintains a Law College, Calcutta Dacca University also has a Law Department attached to it. Calcutta University is mainly an examining body, but it has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated colleges.

The percentage of scholars to the total population —

	Recognised Schools	Art Schools
Males	7 38	7 55
Females	1 72	1 76
Total	4 66	4 75

The University at Dacca is of the residential type. There is a Board for Secondary and Intermediate Education at Dacca. It conducts the Matriculation and Intermediate Examinations for the students of institutions at Dacca and also the Islamic Matriculation and Intermediate Examinations.

The education of Europeans is mainly conducted by private agency assisted by Government grants. Government however maintain a special Inspector and also a school for boys, a school for girls (both residential) at Kursej and attached to the latter a Training College (for women only).

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet on the north-east by Nepal, on the east and south-east by Bihar on the south by two of the Chota Nagpur States of the Central India Agency and the Saugor district of the Central Provinces and on the west by the States of Gwalior Dholpur Bharatpur Sirmoor and Jubbah, and by the Punjab. Their total area amounts to 106,296 square miles to which may be added the area of the two Indian States of Tehri and Rampur both of which lie within the United Provinces. 5,392 square miles and the newly-created State of Benares with an area of 875 square miles giving a total of 112,562 square miles. The total population is 46,510,668.

The Provinces, originally termed the North Western Provinces and so amalgamated in 1877 receiving their present designation in 1902 include four distinct tracts of country portions of the Himalayas including the Kumaon Division which consists of three hill districts, two of which are entirely in the hills and one is half in the submontane belt, the sub-Himalayan tract the great Gangetic plain and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive Canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are fertile and support a very sparse population and the Central Indian plateau is almost equally infertile though better populated. The soil of the Gangetic plain however possesses an extreme fertility and here the density of population rises from 512 persons per square mile in the west to 549 in the centre and 718 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Provinces in India. In the south there are low rocky hills broken spurs of the Vindhyan mountains, covered with stunted trees and jungle and in the North the lower slopes of the Himalayas clothed with dense forest affording excellent big and small game shooting and rising beyond in a tangled mass of ridges ever higher and higher, until it reaches the line of the eternal snows but the greater part of the provinces consists of level plain teeming with highly-cultivated fields and watered by three rivers—the Ganges Jumna, and Gogra.

The People

The population is mainly Hindu, 85 per cent ranking as such whilst Mahomedans number 14 per cent., the total of all other religions being a little over 1 per cent composed of Christians (Europeans and Indians) Jains, Aryas and Sikhs. The Aryas are the followers of the Arya Samaj sect which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Bihar and Bundelkhand, whilst the high-caste Aryans frequent the Western districts of the Province. Most of the people, however show

a mixed Arya Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Bihari Urdu or Hindustani is a dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca*.

Industries.

The principal industry is agriculture which supports no less than 75 per cent of the population. The soils of the Provinces fall into three groups the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium, the chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand clay and loam, the loam being, naturally the most productive. The soil generally yields excellent crops of rice millet maize, linseed, cotton wheat sugarcane, pulses, barley and poppy rice being grown mostly in low-lying heavy clays. The greater part of the Provinces is highly cultivated the rainfall varies from 50 to 60 inches in the Hills to 40 inches in the Benares and Gorakhpur Divisions whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division in the past, but improved drainage and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made and the agricultural prosperity of the Provinces is now high, though it varies with the rainfall. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon on semilandlord tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 54 per cent of the total area in Oudh.

Manufactures

The Provinces are not rich in minerals. Coal exists in Southern Mirzapur iron and copper are found in the Himalayan districts, and there were mines of importance there formerly but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the Hills. Limestone is found in the Himalayas and in the Meerut district, and stone is largely quarried in the Mirzapur district. Cotton is ginned and spun throughout the provinces as a home industry and weaving by means of hand looms is carried on in most districts. According to the census of 1921, 100,998 persons were dependent on cotton ginning, cleaning and pressing, and 320,069 on spinning and weaving. The largest industry is in the Azamgarh district where there are 8,586 looms. Silk spinning is confined almost entirely to the district of Benares where the famous *Minkas* brocade is made. Embroidery is manufactured in Lucknow, where the noted *chikan* work of silk on cotton or muslin is produced, and in Benares, where gold and

silver work on velvet silk crepe and marseen obtained. The glass industry is important in some districts. Benares and Moradabad are noted for their lacquered brass work, Farrukhabad for its calico prints and Agra for its carpets and marble and alabaster articles, porcelain is manufactured in Ghazipur and other industries are those of paper making (Lucknow) dyeing, leather and fireworks. The chief centre of European and Indian industry is Cawnpore, which situated in the most advantageous position on the Ganges, possesses tanneries, cotton, woollen and other mills, which have a large and ever increasing output (the woollen mill is the largest in India). There are cotton factories at Aligarh (famous for its locks), Meerut and Bareilly Mirzapur (which produces also excellent carpets) Hardoi and Hathras have cotton mills. Excellent furniture is made at Bareilly at Allahabad there are stone works, at Ross there is a large English distillery, with patent still.

The largest trade centres are Cawnpore Allahabad, Mirzapur Benares, Lucknow Meerut, Aligarh, Hathras, Mathura Agra Farrukhabad, Moradabad Chandani, Bareilly, Saharanpur Muzaffarnagar Ghaziabad, Khurja, Gorakhpur Ghazipur Pilibhit and Shahjahanpur

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor-in-Council the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and three Ministers from Jan. 12, 1920, in charge of the Transferred Subjects. The medium for the transaction of public business is the Secretariat, the Staff of which consists of 7 Secretaries and 4 Deputy Secretaries. The Director of Public Instruction is also *ex-officio* Deputy Secretary in the Education Department. The Chief Secretary is in charge of Appointment, General Administration, Executive, Political Newspaper and Police Departments. The Finance Secretary deals mainly with the Finance Department the Revenue Secretary is in charge of the Revenue and Forest Departments and Public Works Department (Buildings and Road) the Education Secretary looks to the Education and Industries Departments the L. & G. Secretary to the local Self-Government Municipal, Medical and Public Health Departments & the Judicial Secretary is in charge of the Judicial and Legislative Departments. The seventh Secretary belongs to the Public Works Department (Irrigation Branch) and is also Chief Engineer for the Irrigation Branch of the P.W.D. Government spends the cold weather October to April in Lucknow and Allahabad, mostly in Lucknow though the Secretariat remains throughout the year at Allahabad. The Governor and the Secretaries spend the hot weather in Naini Tal, but during the monsoon the Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases, and it has important executive duties, being the chief revenue authority in the province. There are forty-

eight British districts, thirty-six in Agra and twelve in Oudh, average area 2,000 square miles and average population a million. Each district is in charge of a District Officer termed a Collector and Magistrate in Agra and a Deputy Commissioner in Oudh and Kumaon. The districts are grouped together in divisions under a Commissioner. There are ten divisions having an average area of nearly 12,000 square miles and a population of from 5 to 8 millions. The districts are sub-divided into *tahsils*, with an average area of 500 square miles and a population of 220,000. Each *Tahsil* is in charge of a *Tahsildar* who is responsible for the collection of revenue and also exercises judicial powers. *Tahsils* are divided into *panchayats* which are units of importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *sub-tahsildars* and *kansungos*. Ordinarily there are three *kansungos* and one *sub-tahsildar* to a *tahsil*. The *Kansungos* supervise the work of the *panchayats* or village accountants, check their papers and form a link direct between the villagers and Government. For judicial purposes (revenue and criminal) the District Officer assigns a sub-division consisting of one or more *tahsils* as the case may be to each of his subordinates, who may be covenanted civilians (Joint and Assistant Magistrates and Collectors) or members of the Provincial Service (Deputy Collectors and Magistrates). The Commissioner of the Rohilkhand and Kumaon Divisions are Political Agents for the Native States of Rampur and Tehri respectively and the Commissioner of Benares is the Political Agent for Benares State.

Justice.

Justice is administered by the High Court of Judicature at Allahabad in the province of Agra, and by the Chief Court in Oudh sitting at Lucknow which are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and eight permanent and two temporary puisne judges, five of whom are Indians and the latter consists of a Chief Judge and four judges three of whom are Indians. There are thirty-one posts (twenty-four in Agra and seven in Oudh) of district and sessions judges of which eight are held by Indians not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. They have both original and appellate jurisdiction in civil and criminal cases and occasional appellate jurisdiction in rent cases. District Officers and their assistants including *tahsildars* preside in criminal courts as magistrates and as collectors and assistant collectors in rent and revenue courts and dispose of a good deal of the work. Kumaon has been brought under the Civil jurisdiction of the High Court from 1-4-20. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the provinces there are subordinate judges, judges of small cause courts and munsifs who dispose of a large number of civil suits. In Agra the jurisdiction of a subordinate judge extends to all original suits without pecuniary limit and a munsif can hear cases ordinarily of a value not exceeding Rs. 2,000, and if specially empowered up to Rs. 5,000. In Oudh the ordinary jurisdic-

tion of a subordinate judge extends to suits valuing not more than Rs 20,000 and the ordinary jurisdiction of a munsif to suits of Rs 2,000 value, provided that in special cases the limit of pecuniary jurisdiction can be removed altogether in the case of a subordinate judge and that of the munsif raised up to Rs 5,000. Appeals from munsifs always lie to the district judge while those from the subordinate judges go to the High Court or the Chief Court except in cases of a value of Rs 5,000 or less which are heard by the district judge. Small cause court judges try suits to the value of Rs 500. There are also honorary munsifs limited to Rs 200 suits and village munsifs whose jurisdiction is fixed at Rs 20.

Local Self-Government

Local Self-Government is exercised by means of District and Municipal Boards the former levying local rates on land-owners the latter deriving their revenue from octroi and other forms of taxation. The aim was to abolish octroi, but Indian opinion is reacting on this decision because it interferes with through trade. All the principal Boards now have non-official Chairmen with an Executive Officer who is directly responsible to the Board in all matters.

Public Works.

The Public Works Department is divided into the Buildings and Roads branch and the Irrigation branch. The Buildings and Roads branch is administered by a Civilian Secretary who has a Chief Engineer under him and the Irrigation branch by two Chief Engineers who are also Secretaries to Government. The Province is divided into circles and divisions both for buildings and roads and for irrigation purposes. Each circle is in charge of a Superintending Engineer or a Deputy Chief Engineer and each division is in charge of an Executive Engineer. The whole of the Irrigation works constructed or maintained by Government are in charge of the Irrigation branch. All metal roads maintained from Provincial funds and construction of all buildings costing more than Rs. 20,000 are in charge of the Buildings and Roads branch. In the Irrigation branch there is a separate Chief Engineer with a full staff for the construction of the Ganga Canal a work of the first magnitude which when completed will introduce irrigation into most of the districts of Oudh.

Police.

The Police Force is divided into District and Railway Police and is administered by an Inspector-General with four Deputies and two Assistants, forty-six District Superintendents, three Railway Superintendents, fifty-one Assistant Superintendents and forty-three Deputy Superintendents. There is a Police Training School at Moradabad. There is a local C I D forming a separate detective department, under a Deputy Inspector-General, with three assistants. There is an armed police, specially recruited, and armed with the Martini Rifle. The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service.

Education

Education is maintained in part by the State and partly by means of grants-in-aid. There are five universities, the four residential universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra. The last named was established in 1927 and consists of the eight colleges for men associated with Allahabad University on its external side, viz. the Agra and D. A. V. Colleges at Agra, the Christ Church, D. A. V. and Sanatan Dharma Colleges at Cawnpore, the Meerut College, Meerut, the Barilly College, Bareilly and St. Andrew's College Gorakhpur. There are a number of Intermediate Colleges which prepare boys for the high school and intermediate examinations conducted by the Board of High School and Intermediate Education on which controls high school and intermediate education. The Isabella Thoburn College at Lucknow and the Oorshwaite Girls College at Allahabad impart university education to Indian girls and the Theosophical National Girls School and Women's College at Benares teach up to the intermediate stage. The St. George's Intermediate College, Mussorie, the Phillander Smith College, Naini Tal, the St. Joseph's College, Naini Tal, the Martiniers College, Lucknow and the Boys Intermediate College, Allahabad are a few of the well-known institutions for European and Anglo-Indian children in the province. Besides these, there are many excellent private educational institutions for European boys and girls both in the hills and plains which are attended by students from all over India. Government maintain Training Colleges for teachers in Lucknow, Allahabad and Agra and there are training departments attached to the Aligarh Muslim University and the Benares Hindu University. There is a Government Engineering College at Boree (Thomason College), a School of Art in Lucknow and an Agricultural College and a Technological Institute at Cawnpore. There is also a non-Government Agricultural Institute at Naini, Allahabad. Education in law is given at the four residential universities and at the Agra and Meerut colleges. Instruction in commerce for the B. Com. degree of the Agra University is given in the Sanatan Dharma College, Cawnpore. The King George's Medical College, Lucknow now merged in the Lucknow University prepares candidates for the M.B.B.S. degree of the Lucknow University. Besides this there are two medical schools at Agra for males and females. Public schools for secondary and primary vernacular education are almost entirely maintained or aided by district and municipal boards and vernacular education is almost entirely in their hands.

Medical.

The Medical Department is in charge of an Inspector-General of Civil Hospitals. A Civil Surgeon is in charge and is responsible for the medical work of each district and in a few of the larger stations he has an assistant. In two stations (Ranikhet and Boree) Medical Officers in military employ hold collateral civil charge. There are eighty-three Provincial Medical Service officers in charge of important dispensaries and a large number of Indian Provincial subordinate medical service

officers. Lady doctors and women sub-assistant surgeons visit *pardah* women in their own homes and much good work is done in this manner.

The best equipped hospitals for Indian patients are the Thomason Hospital at Agra, King George's Hospital and the Balmampur Hospital at Lucknow. The Ramsay Hospital for Europeans at Naini Tal is a first class institution and

there are also the Lady Dufferin Hospitals. King George's Medical College is one of the best equipped in the country with a staff of highly eminent professors, and the hospital is the first in the Provinces. There is an X Ray Institute at Dehra Dun, where valuable research work has been carried out and there are sanatoria for British soldiers in the hills.

THE FINANCES OF THE UNITED PROVINCES

As explained in the chapters on the new constitution of India, under the Reform Act of 1919, the financial position of the Provinces underwent a remarkable change. The Provinces are for all practical purposes financially independent of the Government of India subject to a fixed annual contribution which it is intended shall be gradually reduced to vanishing point when the position of the Central Government permits. As the finances of the Provinces thus become of greater importance the position is set out in some detail in the following pages—

ESTIMATED REVENUE FOR 1927-28.

<i>Principal Heads of Revenue</i>		Rs
Taxes on Income		
Land Revenue		6,91 15,059
Excise		1 38 43 000

Mr. C. W. Jones, Superintendent

The Punjab.

The Punjab, or land of the five rivers, is so called from the five rivers by which it is enclosed, namely the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North West Frontier Province and the Indian State of Jammu and Kashmir which lie to the north the Punjab occupies the extreme north western corner of the Indian Empire and with the exception of the above-mentioned province comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912 the Punjab with its feudatories embraced an area of 136,830 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 23,587 trans-frontier Baluchis) that is to say about one-thirteenth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 880,000 souls respectively. The total population of the Province in 1921 including the Baluch tribes on the border of the Dehra Ghazi Khan District was 25,101,060 of whom 4,416,036 were in the Indian States.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Sulaiman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 2,000 square miles, with a scanty population living scattered in tiny mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in character to those of the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including a wide range of the Siwaliks, runs the narrow mountainous tract. This tract secures in an ample rainfall and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost wholly agricultural and pastoral but it includes one large town in Sialkot. Of the plains of the Punjab the eastern portion covers an area of some 86,000 square miles with a population of 10½ millions. East of Lahore the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons but over the greater part of the area the margin is so slight that except where irrigation is employed, any material reduction in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar and the population in comparison with the western Punjab is largely urban. The western plains cover an area of 52,000 square miles, with a popu-

lation of a little over six millions. The rains fall in this area, heaviest in the north and east and decreasing towards the west and south is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low lying river banks left moist by the retreating floods. In this very circumstance these tracts find their security against famine for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Chenab and Jhelum Canals which now challenge the title of the eastern plains as the most fertile wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position its scanty rainfall and cloudless skies, and perhaps to its wide expanse of unutilised plains the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer from April to September is scorchingly hot and in the winter sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

States

The Indian States of the Punjab were formerly in the Political charge of the Punjab Government. In 1911 however the thirteen most important States including Patiala, Nabha, Jind and Narba were formed into a separate Punjab States Agency under the control of the Agent to the Governor-General Punjab States. The only States remaining in the charge of the Punjab Government are the Simla Hill States for which the Deputy Commissioner of Simla is Political Officer and three small States in the Ambala Division, Kalsia, Pataudi and Dujana which are supervised by the Commissioner of Ambala.

The People

Of the population roughly one half is Mahomedan, three eighths Hindu and one-eighth Sikh. Socially the landed classes stand high and of these the Jats numbering nearly five millions are the most important. Roughly speaking, one half the Jats are Mahomedans, one-third Sikh and one-sixth Hindu. In this tribulation they are ubiquitous and are equally divided over the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the man power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found

in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmins, Sayads and Kurehis) most of whom are landholders, the trading castes of the Hindus (Khatri, Aroras and Banias) and trading castes of the Mahomedans (Khojas, Parachas and Khakhas) and the numerous artisan and menial castes. There are also vagrant and criminal tribes and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring districts in the west who number about half a million and maintain their tribal system and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse dealing labour and trade. A small Tibetan element is found in the H. Malayan districts.

Languages

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language sometimes called Lahndi and is spoken in the north and west. The next most important languages are Western Hindi which includes Hindustani, Urdu (the polished language of the towns) and other Hindi. Western Punjabi which is spoken in the hill tracts and Rajasthan the language of Rajputana. Baluchi Pushto Sindhi and Tibeto-Burman languages are used by small proportions of the population.

Agriculture

Agriculture is the staple industry of the province affording the main means of subsistence to 36 per cent. of the population. It is essentially a country of peasant proprietors about one-sixth of the total area in British districts is Government property the remaining five sixths belonging to private owners. But a large part of the Government land is so situated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates nearly 2,000,000 acres of what was formerly waste land and the Lower Jhelum Canal, 400,000 acres and the Lower Bari Doab Canal when the colonisation scheme is completed will add 1,580,000 acres to this total. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands the total extent of which is about 8,700 square miles. Of the crops grown wheat is the most important and the development of irrigation has led to a great expansion of the wheat area. Next in importance to wheat is gram. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. Cotton is grown generally throughout the province. On the Canal irrigated areas the cotton grown is chiefly American but elsewhere it is the short stapled variety known as Bengali. The country being preponderantly agricultural a considerable proportion of the wealth of the people lies in its live-stock. Large profits are derived from the cattle and dairy trades and wool is a staple product in the south west in Kulu and

Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries

The mineral wealth of the Punjab is small rock salt, saltpetre and limestone for road building being the most important products. There are some small coal mines in the Jhelum, Shahpur and Mianwali districts with an output of about 75,000 tons a year and gold washing is carried on in most of the rivers not without remunerative results. Iron and copper ores are plentiful but difficulties of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Punjab is not a large manufacturing country the total number of factories being only 563 the majority of which are cotton spinning and pressing factories. Cotton weaving as a domestic industry is carried on by means of hand looms in nearly every village. The Salvation Army and the five Government Weaving Schools have shown considerable enterprise in improving the hand weaving industry. Blankets and woollen rags are also produced in considerable quantities and the carpets of Amritsar are famous. Silk weaving is also carried on and the workers in gold, silver, brass, copper and earthenware are fairly numerous and ivory carving is carried on at Amritsar and in the Patiala State and Mussaffargah District. Mineral Oil is being extracted and refined in the Attock District and a cement industry has been started.

Administration.

Prior to the passing of the Indian Reform Act of 1919 the system of administration was that of a Lieutenant-Governor drawn from the ranks of the Indian Civil Service. Under that Act the Province was raised to the status of a Governorship with an Executive Council and Ministers the Governor in Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. The general system of provincial administration under this scheme is sketched in the section Provincial Government (p. 7) where is also given a list of the Reserved and Transferred Subjects. Associated with the Governor and the Council and Ministers is an enlarged Legislative Council with wide powers whose scope and authority are given under the Legislative Councils (p. 7) the system being common to all the major Provinces. The business of Government is carried on through the usual Secretariat which consists of five Secretaries designated (1) Chief (2) Home (3) Finance (4) Revenue Secretaries and Secretary, Transferred Departments one Deputy Secretary two Under Secretaries and two Assistant Secretaries. In the Public Works Department, there are also three Secretaries (Chief Engineers) one in the Buildings and Roads Branch and two in the Irrigation Branch. The heads of the Police and Educational Departments are also Under Secretaries to Government. The Government spends the winter in Lahore and the summer (from the middle of May to the middle of October) in Simla. Under the Governor, the province is administered by six Commissioners (for Am

sis, Jullunder, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district.

The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards) the three Chief Engineers, the Inspector General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Director of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Local Remembrancer.

Justice

The administration of justice is entrusted to a High Court which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and six puisne judges (either civilians or barristers) and four additional judges. Subordinate to the High Court are the District and Sessions Judges (22 in number) each of whom exercises civil and criminal jurisdiction in a civil and sessions division comprising one or more districts. In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elders (Jirga) may pass sentence up to four years imprisonment.

Local Self Government

Local Self Government is secured in certain branches of the administration by the constitution of District Boards each exercising authority over a district of Municipal, Small Town and Notified Area Committees each exercising authority over an Urban area and of Panchayats each exercising authority over a revenue estate or a compact group of revenue estates. The funds of District Boards are derived from a levy on the land revenue of the district supplemented by Government grants, profession taxes and miscellaneous fees and those of Municipal Small Town and Notified Area Committees from octroi and in some cases other forms of taxation and Government grants. The Panchayat is an attempt to revive the traditional village community, the elected committee or Panchayat possessing certain powers in respect of taxation, local option, civil and criminal justice and other matters. The elective principle is now practically universal in all classes of local self governing bodies. Under the reformed system of Government the public has begun to show considerable interest in elections.

Police

The Police force is divided into District and Railway Police. The combined force is under the control of the Inspector General who is a member of the Gazetted force and has under him three Deputy Inspector Generals and a fourth Deputy Inspector General in charge of Criminal Investigation Department and Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur controlled by a Principal of the rank of Superintendent of Police. The Railway Police are under an Assistant Inspector General. The District Police are controlled by Superintendents each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

Education

The strides which have been made in the past decade especially in the concluding years of the period have brought the Punjab into line with the older and more forward provinces. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise Government itself maintains ten arts colleges (including one for Europeans and another for women), one central training college, twelve separate schools and a number of training classes for teachers of both sexes, 86 secondary schools for boys and girls, a reformatory school and 40 centres for vocational training. Apart from these institutions for general education Government maintains ten higher grade professional institutions, viz. the medical and veterinary colleges and the arts and technical schools at Amritsar, the medical school at Amritsar, the agricultural college at Lyallpur, the Engineering college at Multan and school at Rasool and the Institute of Dyeing and Calico printing and the Model dairy at Shahdara. In addition a hosiery institute has been established at Ludhiana and a central weaving institute at Amritsar while there are sixteen industrial schools scattered over the province.

The Department of Education is in charge of the Minister for Education who is assisted in the work of administration by the Director of Public Instruction. The Punjab University controls higher education.

Forests

Large areas in the hills and elsewhere which are unsuitable to cultivation are preserved as forest lands the total extent of which is about 8,000 square miles.

Medical.

The Medical Department is controlled by the Inspector General of Civil Hospitals (a member of the Indian Medical Service). The Department of Public Health is controlled by the Director of Public Health (also a member of the Indian Medical Service) who for the present has under him two Assistant Directors of Public Health and is advised by the Sanitary Board, with the Sanitary Engineer as Technical Adviser.

Burma.

The Province of Burma lies between Assam on the North West and China on the North East and between the Bay of Bengal on the West and South West and Slam on the South East. Its area is approximately 268,000 square miles of which 184,000 are under direct British Administration 10,000 are administered and 63,000 belong to semi-independent Native States. The main geographical feature of the country is the series of rivers and hills running from North to South with fertile valleys in between widening and flattening out as they approach the Delta. Differences of elevation and rainfall produce great variations in climate. The coastal tracts of Arakan and Tenasserim have a rainfall of about 200 inches the Delta less than half that amount. The hot season is short and the monsoon breaks early. The maximum shade temperature is about 96° the minimum about 61°. North of the Delta the rainfall decreases rapidly to 30 inches in the central dry zone which lies in a rain shadow and has a climate resembling that of Bihar. The maximum temperature is twenty degrees higher than in the wet season but this is compensated by a bracing cold season. To the north and east of the dry zone lie the Kachin hills and the Shan plateau. The average elevation of this tableland is 3,000 feet with peaks rising to 9,000. Consequently it enjoys a temperate climate with a rainfall of about 70 inches on the average. Its area is over 50,000 square miles. There is no other region of similar area in the Indian Empire so well adapted for European colonization. The magnificent rivers the number of hilly ranges (Yoma) and the abundance of forests all combine to make the scenery of Burma exceedingly varied and picturesque.

The People

The total population of Burma at the census of 1921 was 3,169,039. There were 8,322,335 Burmans 1,017,987 Shans 1,220,366 Karens, 146,846 Kachins 238,847 Chins 390,000 Arakanese 223,609 Talangs and 1,225,713 Talangs. There is also a large alien population of 149,080 Chinese and 837,477 Indians while the European and Anglo-Indian population numbered 25,000 and Ind. Europeans 120,271.

The Burmans who form the bulk of the population belong to the Tibetan group and their language to the Tibeto-Chinese family. They are essentially an agricultural people 80 per cent of the agriculturists of the country being in their hands. The Burmese, and most of the hill tribes also profess Buddhism but Animism or the worship of nature spirits is almost universal. The interest taken by the Burmese in the course of the war their response to the call for recruits and their generous contributions to war loans and charitable funds seem to show that their sympathy towards the government of the country is giving way to an intelligent loyalty to British rule.

In appearance the Burman is usually somewhat short and thick set with Mongolian features. His dress is most distinctive and exceedingly comfortable. It consists of a silk jacket bound round his forehead, a loose

jacket on his body and a long skirt or longyi tied round his waist, reaching to his ankles. The Burmese women perhaps the most pleasing type of womanhood in the East lead a free and open life playing a large part in the household economy and in petty trading. Their dress is somewhat similar to the men's minus the silk kerchief on the head and the longyi is tucked in at the side instead of being tied in front. A well dressed and well groomed Burmese lady would for grace and neatness challenge comparison with any woman in the world.

Communications

The Irrawaddy and to a less extent the Chindwin afford great natural thoroughfares to the country. At all seasons of the year these rivers especially the Irrawaddy are full of sailing and steam craft. In the Delta the network of waterways is indeed practically the only means of communication. The Irrawaddy Flotilla Company with a fine fleet of small cargo and ferry boats gives the Irrawaddy and the Delta rivers and creeks a splendid river service.

The Burma Railway Company has a length of 1,679 miles open line. The principal lines are from Bangkok to Mandalay from Sagaya to Myitkya the most northern point in the system the Rangoon Freetown line and the Pegu Martaban line which serves Moulmein on the further bank of the Salween River.

Industry

Agriculture is the chief industry of the province and supports nearly three fourths of the population. The net sown cropped area is 163 million acres of which nearly 2 million acres are cropped more than once. Irrigation works supply water to nearly 1 million acres. India is very largely dependent on Burma for her supplies of kerosene benzine and petrol which rank second to rice in order of importance. Teak wood is exported in large quantities from Burma to India.

Forests play an important part in the industrial life of the Province. The forest reserves cover some 31,734 square miles while unclassified forests are estimated at about 116,093 square miles. Government extracts some 84,408 tons of teak annually private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief extract over 441,374 tons. Other timber extracted by licensees amounts to over 449,653 tons and firewood over 1,111,709 tons.

Tin and wolfram are found chiefly in the Tavoy and Mergui Districts. Wolfram and tin are found together in most mining areas in Tavoy the proportion varying from almost pure tin to almost pure wolfram. The rise in the price of tin has revived the tin mining industry in the Tavoy and Mergui Districts.

Owing to a depression in the market most of the wolfram mines have closed down. Silver lead and zinc ore are extracted by the Burma Corporation at Bawdwin in the Northern Shan States. Copper in small quantities is also found there. There are small deposits of Molybdenite in Tavoy and Mergui and of plat-

ness in Myittha. The output of precious stones from the ruby mines has declined. Gold dredging in the Myittha District has proved unprofitable and the company has been wound up. From the mines in the Hukong valley jade and amber are won. The oldest and largest oil field in the province is at Yenang Uyang in Magway District where the Burma Oil Company has its chief works. But borings in other districts have shown that the oil bearing strata extend over a large part of the dry zone, and the output from the smaller fields in Pak-yikin and Mabin Districts is now considerable, while the wells sunk in Thavemyi District are also showing satisfactory returns. Two-thirds of the total production comes from the Yenang Uyang and Singu fields. The Burma Oil Company take their oil to the refineries at Rangoon by pipe line from Singu and Yenang Uyang. Other companies take it down by river flats. The area under rubber is 86,000 acres.

Manufactures

There are 981 factories over three-fifths of which are engaged in milling rice and over one-sixth are sawmills. The remainder are chiefly engineering works, cotton spinning mills, oil mills for the extraction of oil from groundnuts and oil refineries connected with the petroleum industry. The average daily number of operatives is over 100,000. At the census of 1921 193,729 or 2848 per cent of the total population were engaged outside agriculture and production.

As in the case in other parts of the Indian Empire the imported and factory made articles is rapidly ousting the home made and indigenous. But at Amarapura in the Mandalay District a revival has taken place of hand silk weaving. Burmese wood carving is still famous and many artists in silver still remain the finish of whose work is sometimes very fine. Bassein and Mandalay parasols are well known and much admired in Burma. But perhaps the most famous of all hand made and Indian industrial is the lacquer work of Lagan with its delicate patterns in black green and yellow traced on a ground work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models breaking away from the conventionalized forms into which their silver work had crystallized and the new figures display a vigour and life that make them by far the finest examples of art the province can produce.

Administration

Burma which was at that time administered as a Lieutenant Governorship was deliberately excluded from the operation of the Reform Act of 1919. It was felt that the Province differed so markedly from the other Provinces in the Indian Empire that its requirements should be separately considered. After repeated discussions the question was referred to a special Burma Reforms Committee, which in 1922 recommended that all the essential provisions of the Reform Act should be applied to the Province. This recommendation was accepted and the proposals became law. Under this Act Burma became a Governor's Province with an executive council and ministers and

conforms to the provinces created under the Act of 1919 (q.v.). The main difference is in the size of the electorate. Under the franchise accepted the rural electorate is estimated at 1,738,811 and the urban electorate has been put as high as 82,478. The Legislative Council consists of 104 members of which 40 are elected and the balance nominated. (Owing to the special status of women in Burma female franchise was dropped from the beginning.)

Burma is divided administratively into Upper Burma (including the Shan States and Chin Hills) and Lower Burma. The Shan States are administered by the Chiefs of the States subject to the supervision of the Commissioner Federated Shan States who is also Superintendent for the Southern Shan States and the Superintendent of the Northern Shan States. The Northern and Southern Shan States were formed into a Federation on the 1st October 1922 and are designated the F.S.S. States. The other Shan States in Burma are subject to the supervision of the Commander Sagalung Division. The Civil, Criminal and Revenue administration is vested in the Chief of the State subject to the restrictions contained in the statute. The law administered is the customary law or the State.

Under the Governor are eight Commissioners of divisions three in Upper four in Lower Burma and one in the Federated Shan States.

Justice.

The administration of Civil and Criminal Justice is under the control of the High Court of Judicature at Rangoon which consists of a Chief Justice and ten other permanent Judges. The Superior Judicial Service consists of District and Sessions Judges there are also separate Provincial and Subordinate Judicial services.

All village headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1921 to restore to the village headmen the power and influence which they possessed in Burmese times before the centralizing tendencies of British rule made them practically subordinate officers of the administration.

Public Works

This Department is administered by two Chief Engineers. There are 11 permanent Superintending Engineers (7 for Buildings and Roads and 4 for Irrigation) and 87 Executive Engineers and Assistant Executive Engineers. A temporary Chief Engineer for Roads in the Province has been appointed for a period of two years. There are also a Consulting Architect, Electrical Inspector, Water and Sewerage Engineer (Specialist posts) and a River Training Expert the incumbents of which are stationed at Headquarters.

Police.

The Police Force is divided into Civil, Military and Rangoon Town Police. The first two are under the control of the Inspector General of Police, the latter is under the orders of the Commissioner of Police Rangoon, an officer of the rank of

Deputy Inspector-General There is a Dy Inspector-General, Administration in charge of administrative detail of the Civil Police and five other Deputy Inspectors General, one each for the Northern, Southern and Western Ranges, one for the Railway and Criminal Investigation Department and one for the Military Police.

A special feature of Burma is the Military Police. Its officers are deputed from the Indian Army. The rank and file are recruited from natives of India with a few Kachins, Karens and Shans. The experiment of recruiting Burmese on a small scale has been successful. The organisation is military, the force being divided into battalions. The object of the force is to supplement the regular troops in Burma. Their duties apart from their military work is to provide escorts for special prisoners etc. and guards for Treasuries, Jails and Courts.

Education

At the head is the Director of Public Instruction with an Assistant Director both belonging to the Indian Educational Service. There are nine Inspectors of Schools drawn from the Indian Educational Service while the Burma Educational Service provides seven Assistant Inspectors. There is also an Inspector of Schools. There is a Chief Educational Officer for the Federated Shan States.

A centralized teaching and residential university for Burma has been established in Langoon. It now provides courses in Art, Science, Law, Education, Economics, Engineering, Medicine and Forestry.

A remarkable feature of education in Burma is the system of elementary education evolved generations ago by the genius of the people. Nearly every village has a monastery (hpooogyi kyauks) every monastery is a village school and every Burman boy must in accordance with his religion attend that school, shaving his head and for the time wearing the yellow robe. At the hpooogyi kyauks the boys are taught reading and writing and an elementary native system of arithmetic. The result is that there are very few boys in Burma who are not able to read and write.

Among special institutions the Government Technical Institute, Mandalay, provides courses in Mechanical, Civil and Electrical Engineering and the Agricultural College, Mandalay, courses in Agriculture.

A liberal scheme of State Scholarships provides for the despatch of 12 scholars to Europe each year.

Medical

The control of the Medical Department is vested in an Inspector General of Civil Hospitals. Under him are 41 Civil Surgeons. There is also a Director of Public Health, two Assistant Directors of Public Health, the senior of whom is also Director, Public Health Institute to which is attached a Malaria Bureau, an Inspector General of Prisons, three whole time Superintendents of Prisons, a Chemical Examiner and Bacteriologist and a Superintendent of the Mental Hospital.

There is also a Hygiene and Publicity Officer. The Pasteur Institute was opened in Rangoon in July 1915. The Director is a senior member of the Indian Medical Service.

THE FINANCES OF BURMA

In common with the other Provinces of India the financial arrangements between the Government of India and the Government of Burma underwent a re-modelling in consequence of the reconstitution of the Province on the lines of the other Indian Provinces. The Provinces obtained substantial financial independence. The present position is set out in the following statement—

ESTIMATED RECEIPTS FOR 1927-28

(A) REVENUE RECEIPTS—ORDINARY

Principal Heads of Revenue		Rs
Taxes on Income		10,20,000
Land Revenue		5,35,19,000

Bihar and Orissa.

Bihar and Orissa lies between 19°-02' and 27°-30' N latitude and between 82°-31' and 88°-25' E longitude and includes the three provinces of Bihar, Orissa and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal, on the east by Bengal and the Bay of Bengal, on the south by the Bay of Bengal and Madras, and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the British territories which constitute the Governorship of Bihar and Orissa is 8380 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule there are two groups of petty States which lie to the south and south west of the Province and which under the name of the Feudatory States of Orissa and Chota Nagpur are governed each by its own Chief under the superintendence and with the advice of the Political Agent and Commissioner Orissa Feudatory States. The area of these territories is 28648 square miles and as it is usual to include them when speaking of Bihar and Orissa the area of the whole Province may be stated at 111828 square miles. Two of the provinces of the Governorship of Bihar and Orissa, viz Bihar and Orissa, consist of great river valleys, the third, Chota Nagpur is a mountainous region which separates them from the Central Indian Plateau. Orissa embraces the rich deltas of the Mahanadi and the neighbouring rivers and is bounded by the Bay of Bengal on the south east and washed in on the north west by the hilly country of the Tributary States. Bihar lies on the north of the Province and comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. Between Bihar and Orissa lies Chota Nagpur. Following the main geographical lines there are five Civil Divisions with headquarters at Patna, Munger (for Bihar), Bhagalpur, Cuttack (for Orissa) and Ranchi (for Chota Nagpur).

The People

The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as Patna, the old town being called Patna City.

The Province has a population of 37,961,358 persons which is very little less than that of France and rather more than that of the Bombay Presidency. The province is almost entirely rural, no fewer than 963 in every 1,000 live in villages. Even so with 339 persons per square mile, Bihar and Orissa is more thickly populated than Germany. There are only three towns which can be classed as cities, namely Patna, Gaya and Bhagalpur. During the last thirty years the population of Patna has been steadily diminishing. Hindus form an overwhelming majority of the population. Though the Muhamma-

dans form less than one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 6.16 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas the latter district being a continuation of the plateau in a north-easterly direction.

Industries.*

The principal industry is agriculture. Bihar more especially North Bihar being the Garden of India. Rice is the staple crop but the spring crops wheat, barley and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,320,760 acres or 48 per cent of the cropped area of the Province. Wheat is grown on 1,285,900 acres, barley on 1,406,100 acres, maize or Indian-corn on 1,637,500 acres the latter being an autumn crop. Oil seeds are an important crop the cultivation having been stimulated by the demand for them in Europe. It is estimated that 2,091,400 acres of land are annually cropped with oil seeds in the Province. There is irrigation in Shahabad, Gaya, Patna and Champaran districts in Bihar and in Belasore and Cuttack in Orissa. The Indigo industry is steadily on the decline the total area sown having decreased from 342,000 acres in 1896 to 25,000 acres in 1923. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale. Its place as a crop manufactured for export has been largely taken by sugarcane the cultivation of which has been considerably extended owing to the high prices given by sugar factories. In the district of Purnea and in Orissa and parts of the Tirhut Division jute is grown but the acreage varies according to the price of jute. The last serious famine was in 1895-96 but there was a serious shortage of foodstuffs in the south of the Province in 1919. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the *Katia*, due towards the end of September or up to middle of October. Rain at this time not only contributes materially to an increased output of the rice crop but also provides the moisture necessary for starting the spring or *rabi* crops.

Manufactures

Opium was formerly with indigo the chief manufactured product of Bihar but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Yennissar Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest

* The figures given in this paragraph relate to British territory only.

in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinplate Company of India Agricultural Implements, Ltd. Enfield Cable Company of India Enamelled Ironware Limited and Indian Steel Wire Products. The population of Jamshedpur is rapidly approaching 100,000 and it consumes $1\frac{1}{2}$ million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both Bengal and Bihar and Orissa with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years while valuable new fields are being developed at Ramgarh Bokaro and Karampur in Hazaribagh. This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum Palaman Ranchi the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shalao the latter of which is exported from India to the value of ten crores annually.

Administration

The Province on first constitution was administered by a Lieutenant-Governor in Council thus being unique in India as the only Lieutenant Governorship with a Council. Under the Reform Act of 1919 it was raised to the status of a Governorship with an Executive Council and Ministers. The principles of the provincial administration are fully explained in the section. The Provincial Governorships where the division of the administration into Reserved Subjects in charge of the Governor and his Executive Council and Transferred Subjects in charge of the Governor and Ministers chosen from the Legislative Council, is set out in detail. In all these respects Bihar and Orissa is on the same plane as the other Provinces in India.

Public Works

The Public Works Department in the Province of Bihar and Orissa consists of two separate branches viz. (1) the Buildings and Roads and (2) Irrigation which also deals with railways. Each has a Chief Engineer who is also Secretary to the Local Government with an Engineer Officer as Under-Secretary in the Buildings and Roads branch and a non professional Assistant Secretary in the Irrigation branch under him. The Electrical work of the Province is carried out by an Electric Inspector and an Electrical Engineer and a staff of subordinates.

Justice

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognisable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsiff extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000.

though the limit may be extended to Rs. 4,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be though in point of fact be very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the non regulation districts the Deputy Commissioner and his subordinates exercise civil powers and hear rent suits.

Land Tenures.

Estates in the Province of Bihar and Orissa are of three kinds namely, those permanently settled from 1793 which are to be found in the Patna Tirhut and Bhagalpur divisions those temporarily settled as in Chota Nagpur and parts of Orissa and estates held direct by Government as proprietor or managed by the Court of Wards. The passing of the Bengal Tenancy Act (VIII of 1885) safeguarded the rights of the cultivators under the Permanent Settlement Act. Further the Settlement Department under the supervision of the Director of Land Records makes periodical survey and settlement operations in the various districts both permanently and temporarily settled. In the former the rights of the under-tenants are recorded and attested while in the latter there is the re-settlement of rents. In the re-settlement proceedings rents are fixed not only for the landlords but also for the tenants. A settlement can be ordered by Government on application made by land lords or tenants.

The tenures of Orissa are somewhat different. Under the zamindari, that is, the proprietors who took settlement from Government and pay revenue to Government direct is a class of subordinate proprietors or proprietary tenure holders who were originally village headmen dealing more or less direct with the revenue authorities. They have a variety of names such as mukadam padam maurasi sarbarakar puresahi, khariddar and shukm; zamindar. These sub-proprietors or proprietary tenure holders pay their revenue through the zamindars of the estates within which their lands lie. In Chota Nagpur Orissa and the Santal Parganas the rights of village headmen have been recognised. The headman collects the rents and is responsible for them minus a deduction as remuneration for his trouble.

Both Orissa and Chota Nagpur have their own Tenancy Acts.

Police

The Departments of Police Prisons and Registration are each under the general direction of Government supervised and inspected by an Inspector General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are four Deputy Inspectors-General and 28 Superintendents. There are also 28 Assistant Superintendents of Police and 28 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and

distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. There are three companies of unmounted Military Police and one company of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties.

Education.

The position of education in the Province with the numbers attending schools, is set out in the section Education and the tables attached thereto (g v) showing in great detail the educational status of the administration.

There is a University at Patna, whose functions are described under the Indian Universities (g v).

Medical.

The Medical Department is under the control of the Inspector General of Civil Hospitals who

is a Member of the Indian Medical Service. Under him there are 21 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are stationed. 59 Dispensaries are maintained by Government in addition to 574 Dispensaries maintained by Local bodies, Railways private persons etc. 4716 068 patients including 52 180 in-patients were treated in all the dispensaries in 1925. The total income of the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounted to Rs. 39 32 902.

A large mental hospital for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution for the Indians has been opened at Ranchi since September 1925 for the treatment of patients from Bihar and Orissa and Bengal. An Institute for radium treatment has also been established at Ranchi.

A medical college has been opened at Patna and the Medical School which was in existence at Patna has been transferred to Darbhanga.

THE FINANCES OF BIHAR AND ORISSA

As Bihar now enjoys practical financial autonomy, the finances are set out in greater detail.

The Central Provinces and Berar. 157

The Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 181,082 sq. miles of which 82,000 are British territory proper 18,000 (etc. Berar) held on perpetual lease from the Nizam and the remainder held by Feudatory Chiefs. The population (1921) is 13,912,780 under British administration including 3,075,818 in Berar. Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny in 1851 into the Chief Commissioner-ship of the Central Provinces. Berar was in 1803 assigned to the East India Company as part of a financial arrangement with the Nizam for the maintenance of the Hyderabad contingent and was leased in perpetuity to the Central Provinces in 1903 as the result of a fresh agreement with the Nizam.

The Country

The Central Provinces may roughly be divided into three tracts of up and with two intervening ones of plain country. In the north-west the Vindhyan plateau is broken country covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat-growing country of the Aerbudda valley. Then comes the high Satpura plateau characterised by forest-covered hills and deep water-cut ravines. Its little decline into the Nagpur plain whose broad stretches of deep black cotton soil make it one of the more important cotton tracts of India and the wealthier part of the C. P. proper. The Eastern half of the plateau lies in the valley of the Wunganga and is mainly a rice-growing country. Its numerous irrigation tanks have given it the name of the 'lake country' of Nagpur. Further east is the far-rolling, rich country of Chhattisgarh in the Mahadevi basin. The south-east of the C. P. is again mountainous, contains 1,24,000 square miles of forest and precipitous ravines and is mostly inhabited by jungle tribes. The Feudatory States of Bastar and Kanker lie in this region. Berar lies to the south-west of the C. P. and its chief characteristics are its rich black cotton soil plains.

The People

The population of the province is a comparatively new community. Before the advent of the Aryans the whole of it was peopled by the Gondas and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills where they now outnumber all the other hill and forest tribes and form nearly a quarter of the whole population of the C. P. being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the new comers are indicated by the language divisions of the province. Hind brought in by the Hindustani-speaking peoples of the North prevails in the North and East Marathi in Berar and the west and centre of the C. P. Hindi is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent. and Goudi by 7 per cent. The

effects of invasion are curiously illustrated in Berar where numbers of Moslems have Hindu names being descendants of former Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanisation of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries

When Sir R. H. Temple became first Chief Commissioner of the C. P. the province was landlocked. The only road was that leading from Jabulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is of course agriculture which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the zemindari or great landlord system ranging with numerous variations from the great Feudatory chieftains which are on this basis, to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay rajawati system. About 10,703 square miles of the C. P. is Government reserved forest in Berar the forest area is about 2,810 square miles the total forest area being one-sixth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste 86 per cent. of the total land is occupied for cultivation in the most advanced districts the proportion is 90 per cent. and in Berar the figure is also high. The cultivated area is extending continuously except for the temporary checks caused by bad seasons. Rice is the most important crop of the C. P. Wheat comes next with 11 per cent. then pulses and other cereals used for food and oil seeds with 11 per cent. and cotton with 9 per cent. In Berar cotton occupies 48 per cent. of the cropped area, jowar covers 38 per cent. then wheat and oil seeds. In agriculture more than half the working population is female.

Commerce and Manufactures.

Industrial life is only in its earliest development except in one or two centres where the introduction of modern enterprises along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills owned by Parsi manufacturers were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of yarn exported from the Province during the year ending 31st March 1926 was about 118,423 mounds valued at nearly 5½ lakhs of rupees.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1926 employed 81,067 persons and raised 766,148 tons. Then follow coal mining with an output of 685,144 tons and 8,381 persons employed the Jabalpur marble quarries and allied works, the limestone quarries and the mines for pottery clay soapstone &c.

The total number of factories of all kinds legally so described was 747 in 1926 the latest period for which returns are available and the number of people employed in them 67,106. The same economic inducements which are operative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries as communications improve and concentrating industries in the towns. While the village industries are fading away, a large development of trade has taken place. The last pre-war reports showed an increase in volume by one third in eight years.

Administration

The administration of the Central Provinces and Berar is conducted by a Governor in Council who is appointed by the Crown. He is assisted by eight Secretaries and six under secretaries. Under the reform scheme the administration is conducted by a Governor with an Executive Council of two members, one of whom is a non-official and two Ministers the latter being in charge of the transferred subjects.

The local legislature consists of 70 members at least 70 per cent of whom are elected and not more than 20 per cent are officials. The Governor (who is not a member of the Council) has the right of nominating two additional members with special knowledge on any subject regarding which legislation is before the Chamber. The C. P. are divided for administrative purposes into four divisions and Berar constitutes another division. Each of these is controlled by a Commissioner. The divisions are sub-divided into districts each of which is controlled by a Deputy Commissioner, immediately subordinate to the Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, Registrar-General of Births Deaths and Marriages and Inspector General of Registration, the Chief Conservator of Forests, the Inspector General of Civil Hospitals, the Director of Public Health, the Inspector General of Police, the Inspector General of Prisons, the Director of Public Instruction, the Excise Commissioner, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Remembrancer and the two Chief Engineers. Public Works Department, Buildings and Roads and Irrigation Branches. The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer over whom the Deputy Commissioner has certain powers of supervision particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon, who is generally also Superintendent of the District Jail and

whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also Marriage Registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners or members of the Indian Civil Service, (b) one or more Extra Assistant Commissioners or members of the Provincial Civil Service usually natives of India but including a few Europeans and Anglo-Indians and (c) by Tahsildars and Naib Tahsildars or members of the Subordinate service who are nearly always natives of India. The district is divided for administrative purposes into tahsils the average area of which is 1,500 square miles. In each village a landward or representative of the proprietary body is executive headman.

Justice

The Court of the Judicial Commissioner is the highest court of appeal in civil cases and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

The Court sits at Nagpur and consists of a Judicial Commissioner and 4 Additional Judicial Commissioners of whom one at least must be an advocate of the Court or a Barrister or pleader of not less than 10 years' standing.

Subordinate to the Judicial Commissioner's Court are the District and Sessions Judges (11 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Sub Judges of the 1st and 2nd class.

Local Self-Government

Municipal administration was first introduced under the Punjab Municipal Acts and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope and the C. P. Municipalities Act passed towards the end of the year 1922 has considerably increased the power of the Municipal Committees. The C. P. Municipalities Act has also been extended to Berar. Viewed generally municipal self-government is considered to have taken root successfully. The general basis of the scheme is the Local Board for each tahsil and the District Council for each district. The larger towns have municipalities there being 65 such bodies in the Province.

Under the Central Provinces Local Self Government Act passed in 1920 the Local Boards consist of elected representatives of circles and nominated members other than Government officials not exceeding in number one-fourth of the Board and the constitution of the District Council is a certain proportion of elected representatives of Local Boards of members selected by those representatives and of members other than Government servants nominated by Government.

The District Councils in the Central Provinces have power of taxation within certain

limits and Local Boards derive their funds in allotments from the District Councils. The new Central Provinces Local Self Government Act has also been applied to Berar. The Office Bearers of the District Councils and Local Boards are with few exceptions non official.

Rural education and sanitation are among the primary objects to which these bodies direct their attention while expenditure on famine relief is also a legitimate charge upon the District Council funds.

The Central Provinces Village Panchayat Act was passed in the year 1920 so far 82 Panchayats have been established. A Committee was appointed last year to look into the question of Panchayats and in accordance with one of its recommendations a Village Panchayat Officer has been appointed whose main duty is to do propaganda work and assist in the establishment of Panchayats.

Public Works

The Public Works Department is controlled by two Chief Engineers who are also Secretaries to the Government. There are three Superintending Engineers for Roads, Buildings and three for Irrigation. The Province is well covered by a network of roads some of which have been constructed as famine relief works. In most cases these roads are not fully bridged and are therefore impassable to traffic at times during the rains. During recent years Government has adopted the policy of transfer of State roads and buildings to District Councils for maintenance and a number of roads and buildings have been handed over to the Podes in pursuance of this policy.

State Irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-02). The Irrigation Branch of the department was separated from the Roads and Buildings Branch in 1920. During the last twenty years a sum of about Rs. 6 crores has been expended on the construction of irrigation works of which the more important are the Wainganga, Tandula, Mahanadi, Kharnag and Manjari projects.

Three works viz. the Mahanadi and Wainganga Canals and the Asli Mundha tank were originally sanctioned as productive works and the remainder were all sanctioned as unproductive works. The Mahanadi Canal and the Asli Mundha tank have since been transferred to the unproductive list and it is now to transfer the Wainganga Canal also to that list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on a point of their value as a protection against famine. The normal area of annual irrigation is at present about 400,000 acres and the income from these works is approximately equal to the expenditure incurred on their maintenance and management.

Police

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonments and the Municipalities, is under one force. The strength is equal to one man per 9 square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends over Berar, three Deputy Inspectors-General, for assistance in the administrative control and

supervision of the Police force including the Criminal Investigation Department and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. A Special Armed Force of 600 men is distributed over the headquarters of eight districts for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police. The Central Provinces has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction, a Deputy Director, five Inspectors and two Inspectresses who in their turn are assisted by eight Assistant Inspectors and four Assistant Inspectresses. An Agency Inspector supervises the schools in the Feudatory State. Schools are divided into schools for general education and schools for special education. The latter are schools in which instruction is given in a special branch of technical or professional education. The main divisions of schools for general education is into Primary and Secondary. In the Primary Schools the teaching is conducted wholly in the vernacular and the schools are known as Vernacular Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Vernacular Middle Schools in which instruction is given wholly in the vernacular or Anglo-Vernacular Middle Schools in which instruction is given both in English and the vernacular. In the High School classes instruction until recently was given in English but the vernacular was adopted as the medium of instruction at the beginning of the school year 1922-23. For the convenience of pupils whose mother tongue is not a recognised vernacular of the locality a few English medium classes are still maintained. For administrative purposes schools are further divided according to their management into schools under public management and schools controlled by private bodies. The former consist of (a) schools controlled by Government and (b) schools controlled by Local Bodies or Boards. The latter consist of (a) Schools which are aided by grant from Government or from Local and Municipal Funds and (b) unaided schools. All schools under public management and all aided schools conform in their courses of study to the standards prescribed by the Education Department or by the High School Education Board. They are subject to inspection by the Department and to the general rules governing schools of this type. They are recognised by the Department and their pupils may appear as candidates for any prescribed examination for which they are otherwise eligible. Unaided schools do not follow the rules of the Department nor are they subject to inspection by the Department. They are mostly indigenous schools which have been too recently opened

to have acquired "recognition. Their pupils may not appear as candidates at any of the prescribed examinations without the previous sanction of the Department.

As an experimental measure the inspection and administration of Board Vernacular schools have been transferred to the District Councils at Bhandara, Balaghat, Amraoti and Hoshangabad.

The Primary Education Bill which was passed by the Local Legislative Council in March 1920 marks an important stage by giving Local Bodies power to introduce compulsory education in the areas under their jurisdictions.

Higher education is at present given in five colleges. In Nagpur Morris College teaches up to the M.A. standard in Arts. Hislop College is affiliated up to the M.A. standard in Arts. The Victoria College of Science teaches up to the M.Sc. standard in Science. Up to the B.Sc. standard it works in conjunction with Morris College and Hislop College. In Jabulpore, Robertson College teaches up to the B.A. and B.Sc. standards. The King Edward College capable of accommodating 350 students with spacious grounds and well built hostels for two hundred boarders is now established at Amraoti. It teaches up to the B.A. degree in Arts and the Intermediate degree in Science. The Province contains also a Teachers' Training College at Jabulpore and Normal School at different centres and an Engineering School at Nagpur. There is a Technical Institute at Amraoti which is controlled by the Dept. of Industries. There is also an Agricultural College at Nagpur under the Department of Agriculture.

Collegiate Education is now under control of the University of Nagpur to which the colleges of the province are affiliated. A University Law College has been established at Nagpur with effect from the 1st July 1920. The Nagpur University Act of 1923 provided for a University which in the first instance will be of an examining and affiliating type though it may subsequently and without further legislation undertake wider functions as necessity arises and needs permit. In this connection the speech with which the Honble the Minister for Education introduced the Bill is interesting. He pointed out that from the outset the University will exercise a marked control over its colleges with regard to instruction, the qualifications of teachers, the residence and discipline of students. It will also act as adviser to the Local Government with regard to the financial needs of the colleges and institutions connected with it. Finally the Bill is so drafted that the University may at any moment without further Legislation supplement or replace collegiate instruction by instruction of its own. It may take over the management of existing colleges with the consent of their managing bodies, whether Government or private, or it may institute and maintain colleges of its own. The second important point of difference between the Nagpur Act and other University Acts subsequent to the publication of the Calcutta University Commission's Report is with regard to Intermediate Education. The Bill definitely follows the recommendations of the Central Provinces University Committee of 1914 and of the Sadler Commission in freeing the High

schools from the control of the University. It differs from the Sadler Commission Report and subsequent University legislation in adopting the High School Certificate Examination as the standard of admission to the University and in placing Intermediate Education under the control of the University. The constitution of the University as provided in the Act is in accordance with other recent University legislation in India and is to consist of a Court, an Academic Council and an Executive Council with the Governor of the province as Ex officio Chancellor.

As a corollary to the Central Provinces University Act, the Central Provinces High School Education Bill was passed in 1923 on the lines of the United Provinces Intermediate and High School Education Act. Its aim is to free the High Schools of the Province from the control of the University and from this point of view to substitute for the University a Board of Secondary Education for the regulation and control of Secondary Education. In order however that the connection between Secondary and University Education may still be maintained the Bill provides that on third of the members of the Board will be drawn from men experienced in university affairs and that of this one third not less than two-thirds shall be teachers in the University or in colleges affiliated thereto. At the same time teachers engaged in school work will be adequately represented on the Board.

In order to meet an ever increasing demand for English the introduction of the teaching of English is now being allowed in Vernacular Middle schools on certain conditions.

Medical

The medical and sanitary services of the province are respectively controlled by an Inspector General of Civil Hospitals and a Director of Public Health. The medical department has made much progress since the year 1911. A striking advance has been made in recent years with urban sanitation and the opening of a Medical School at Nagpur. The principal medical institutions are the Mayo Hospital at Nagpur opened in 1884 with accommodation for 120 in-patients, the Victoria Hospital at Jabulpore opened in 1886 and accommodating 100 in-patients, the Lady Dufferin Hospital and the Mair Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jabulpore, these last four being for women and children and containing together accommodation for 120 in-patients. The Mayo Hospital Nagpur was provincialised in 1920. The Main Hospital at Amraoti was provincialised in 1925. The Victoria Hospital at Jabulpore was provincialised in 1926. In accordance with the recent policy 106 local fund dispensaries have been transferred to the administrative and executive control of local bodies. The Province has one Mental Hospital at Nagpur. Vaccination is compulsory in some Municipal towns to which the Vaccination Act has been extended. The Government in 1913 sanctioned the opening of peripartetic dispensaries in unhealthy areas. There is at the present time one such dispensary at each district in the Province. There is also 1 peripartetic dispensary in the Hattia Zamindari of Balaghat district which is contributed by the Zamindar of Hattia.

Finance

The main source of Government income in the province has always been the land revenue, but under Mahratta rule many petty imposts were added in all branches of trade and industry and life in general. Thus there was a special tax on the marriage of Banias and a tax of a fourth of the proceeds of the sale of houses. The scheme of Provincial finance was introduced in 1871-72. Special settlements under this system have been necessitated in view of the

special circumstances of the province and the recurrence of famine which at the end of the 19th century caused a severe economic strain upon the province. The wave of prosperity which has spread over the country in the past 20 years has more than trebled the funds available for the administration compared with what they were before the several years of scarcity and the progress of the administration and of expenditure has increased correspondingly.

FINANCES OF THE CENTRAL PROVINCES

Mr. B. W. Fulay M.A. LL.B. (Urban Factory Labourers)

ELECTED MEMBERS

A—Members elected from the Central Provinces

Name	Constituency
Bal Bahadur Parbhat Chandra Boer B.A. LL.B.	Jubbulpore City Non Muhammadan (Urban)
Mr. Keshao Rao Khandekar	Jubbulpore Division (Urban)
The Hon'ble Mr. R. Raghavendra Rao Bar at Law	Chhattisgarh Division (Urban)
Mr. Chandra Gopal Mishra B.A. LL.B.	Nerbudda Division (Urban)
Dr. N. B. Khare M.D.	Nagpur City-cum Kanptee
Mr. G. R. Pradhan	Do do
Mr. Tukaram Jalram Kedar B.A. LL.B.	Nagpur Division (Urban)
Mr. Rajendra Singh, M.A.S.	Jubbulpore District (South) Non Muhammadan (Rural)
Pandit Kashi Prasad Fande M.A., LL.B.	Jubbulpore District (North)
Mr. Gokukchand Singal	Damoh District
Mr. Kedar Nath Rohan B.Sc. LL.B.	Saugor District
Mr. Durgashanker Kripashanker Mehta	Seoni District
Mr. Umesh Datta Pathak	Mandla District
Mahant Laxminarayandas	Balpur District (North)

Name	Constituency
Seth Shrodas Daga	Raipur District (South).
Thakur Chodilal Bar at Law	Bilaspur District
Mr Ghansham Singh Gupta	Drug District.
Mr Gajadhar Prasad Jaiswal B.A. LL.B.	Hoshangabad District
Seth Thakurdas Goverdhandas	Minar District.
Chaudhari Daulatsingh	Narsinghpur District.
Mr Vishwanath Damodar Salpukur	Chhindwara District.
Mr Dipchand Lalshimchand	Betul District
Mr Krishnaji Pandurang Valdyu B.A. LL.B.	Nagpur District (East)
Mr Visavak Vithal Kalkar	Nagpur District (West)
Mr Govind Damodhar Charde B.A. LL.B.	Wardha Tahsil
Mr Narayan Rajaram Nagh B.A. LL.B.	Wardha District
Mr Nikunth Yadsorao Dotala	Chanda District
Mr Ganpatrao Yadsorao Pande	Bhandara District.
Rao Bahadur Narsinhrao Krishnarao Kelkar	Balghat District
Mr Majiduddin Ahmed	Jubbulpore Division (Rural) Muhammadan (Rural)
Mr Syed Wakil Ahmed Rizvi B.A. LL.B.	Chhattisgarh Division (Rural)
Mr Syed Hifazat Ali B.A. LL.B.	Nerbudda Division (Rural)
Khan Sahib Syed Yasin Syed Lal B.A. LL.B.	Nagpur Division (Rural)
Mr Shyam Sunder Bhargava	Jubbulpore and Nerbudda Landholders Special Constituencies
The Hon'ble Sir Shankarrao Madhwarao Chitambar Kt. 1st	Nagpur and Chhattisgarh Landholders.
Mr M. K. Gokwalkar B.A. LL.B.	Nagpur University
Mr L. H. Bartlett	Central Provinces and Berar Mining Association
Seth Mathuradas Mohota	Central Provinces Commerce and Industry

B—Members from Berar nominated after election.

Mr Pannalal Banadial	East Berar (Municipal) Non Muhammadan (Urban)
Mr Purushottam Balwant Gole	West Berar (Municipal)
The Hon'ble Mr Ramrao Madhwarao Deshmukh Bar-at-Law	Amraoti (Central) Non Muhammadan (Rural).
Mr Ramrao Anand Rao Deshmukh	Amraoti (East)
Mr Uttamrao Sitaramji	Amraoti (West)
Rao Sahib Tukaram Sboram Korde	Akola (East)
Mr Naudeo Sadasheo Isfil	Akola (North West)
Mr Waik Dinkarrao Dharrao Rajurkar	Akola (South)
Mr Yadav Madhav Kale	Buldana (Central)
Mr Pandurang Dinanath Pundalik	Buldana (Malkapur and Jalgaon)
Mr Mahadeo Fakaji Kolhe	Yeotmal (East)
Mr Babarao Krishnaji Patil	Yeotmal (West)
Syed Mobinur Rahman B.A. LL.B.	Berar (Municipal) Muhammadan (Urban)
Mr Muhammad Sharfuddin B.A. LL.B.	East Berar (Rural) Muhammadan (Rural)
Khan Bahadur Mirza Rahuman Beg	West Berar (Rural)
Mr Balkrishna Ganesh Khaparde	Berar Landholders Special Constituencies.
Mr Brijlal Nandlal Biyani	Berar Commerce and Industry

North-West Frontier Province.

The North-West Frontier Province as its name denotes, is situated on the north west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 279 miles and its total area about 89,000 square miles. The territory falls into three main geographical divisions the Cis-Indus district of Hazara the narrow strip between the Indus and the Hills containing the Districts of Peshawar Kohat Bannu and Dera Ismail Khan and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan Hazara and the four districts in the second division contain 13,418 square miles. The mountain regions, north and west are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent to the Governor General. The area of this tract is roughly 25,500 square miles and is interstratified from north to south the political agencies severally known as the Malakand Kyber Kurram North Waziristan and South Waziristan Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents but the bulk of the trans-border population is free from any internal interference so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three-fifths of the size of England without Wales. The density of population throughout the Province equals 150 persons to a square mile but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 208 persons to a square mile and in the trans-Indus plains tract the number is 156. The key to the history of the people of the F W F P lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of the Sakas, and of the White Huns and later the two great waves of Muhammadan invasion. Last came the Sikh invasion beginning in

1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919 and the protracted punitive operations against the Waziris in 1918-1920. These have resulted in the establishment at Razmak, a position dominating the Mahomed Waziri country of a permanent garrison of 10,000 troops drawn mostly from stations lying in the Plains immediately below the hills. A circular road from Bannu through Razmak to Sorongha Jandala and back to the Derajat provides communications transport with this force and facilitates its mobility. The effect of this measure has been a marked improvement in the internal peace of the Tribal area.

The division of the Frontier Province from the Punjab has frequently been discussed, with the double object. In the earlier stages of these debates of securing closer and more immediate control and supervision of the frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor General with head quarters at Peshawar in direct communication with the Government of India in the Foreign and Political Department. In political questions there is no intermediary between the Chief Commissioner and the local officer an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected. The advisability of re-uniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and unofficals to investigate it. The Committee presided over by Mr. D. de S. Bray M.L.A. Joint Foreign Secretary toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs. Baza Ali, M.C.S. T. Ranaachari Chaudhri Shahabuddin, N. V. Samarath and K. B. Abdur Rahim Khan members of the Legislative Assembly H. N. Bolton, I.C.S. (Foreign Dept.) and A. H. Parker, I.C.S. (Punjab) (members). The inquiry developed practically into a contest between Mahomedans and Hindus on communal lines. The Hindus, allied in sympathy with their co-religionists in the Punjab demanded the reunion of the administered districts of the Province with the Punjab or, if that were not attainable then the placing of the judicial

administration of the Province under the Punjab High Court at Lahore. The Mahomedans on the other hand claimed the right of their Province to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus argued that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feeling across the Border. The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favourable to the Hindu viewpoint already explained, and the majority of the Committee comprised of all its other members recommending advance on a Provincial basis. Their principal recommendations were for—

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India.

Early creation of a Legislative Council for the Settled Districts and appointment of Members of Council and Minister.

Appointment of a second Judicial Commissioner which has since been sanctioned and reform of the judicial administration in various directions including interchange of officers with the Punjab so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Indian Empire under the Reforms Scheme after which it is now striving we are assured that with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her.

No action on the report has yet been taken and an important reason for the delay is understood to be the sharp accentuation of communal bitterness throughout the Frontier region as a result of political agitation at Kohat leading to a murderous and incendiary outbreak between the members of the two communities there last spring.

The People.

The total population of the N W F P (1921) is 5 076 476 made up as follows—

Hazara	622,349
Trans-Indus Districts	1 628 901
Trans-Border Area	2 825 186

This last figure is estimated. There are only 561 3 females per 1 000 males in the towns and 872 2 females per 1 000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N W F P any more than in other parts of Northern India where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the

phenomenon. On the other hand the female population has to face many trials which are unknown to men. The evils of unskilled midwifery and early marriage are among them. Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports is 26.9 and the death rate 10.8. The birth-rate was normal below the average for the preceding quinquennium—in Hazara 35 per cent below it—a figure indicating the unusually low vitality of the people after a preceding severe epidemic of malaria. The population is naturally increasing but emigration reduces the net result.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population both numerically and by social position are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal areas to the west. There is a long list of Pathan Baluch Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent of the total and Sikhs to a few thousands. The occupational cleavage of the population confuses ethnical divisions.

Under the North West Frontier Province Law and Justice Regulation of 1901 custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan or Hindu law is applied only in the absence of special custom.

Climate, Flora and Fauna

The climatic conditions of the N W F P which is mainly the mountainous region but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S W Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal the other in winter when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall falls almost entirely. The following description of the Daman, the high ground above the Indus, stretching across Dera Ismail Khan to the mountains on the west occurs in an account written some years ago by Captain Cross-wait. Men drink once a day and the cattle every second day. Washing is an impossible luxury. It is possible in the hot weather to ride thirty miles and neither hear

a dog bark nor see the smoke of a single fire." With the exception of the Kunhar River, in Hazara, which flows into the Jhelum, the whole territory drains into the Indus. The flora of the Province varies from the shrubby jungle of the south-eastern plains to barren hills pine forests and fertile mountain valleys. Tigers used to abound in the forests but are now quite extinct. Leopards, hyenas, wolves, jackals and foxes are the chief carnivora. Bear deer and monkeys are found. A great variety of fish is caught in the Indus.

The mountain scenery is often magnificent. The frontier ranges contain many notable peaks of which the following are the principal.—

Takht-i-Sulaiman, Sulaiman Range in Dera Ismail Khan 11,292 feet.

In a recent report P. A. South Was calls it Pir Ghal and points out that the former spelling is incorrect. *Pir N A*

Pir Ghal Sulaiman Range, in Mahsud Waziristan 11,588 feet.

Sika Ram in the Safed Koh in the Kurram Agency 15,621 feet.

Kagan Peaks of the Himalayas in the Hazara District 10,000 to 18,700 feet.

Istraght Peak (18,900 ft.) Kachin Peak (22,641 ft.) Thirich Mir (25,426 ft.) all in the Hindu Kush on the northern border of Chitral Agency.

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. Special mention may be made of the railway comparatively recently opened linking Baluchistan, in the south west of the N. W. F. P., via Nushki with south east Persia. The line connects with the north west railway system of India and extends 348 miles to Durdap within the Persian border. Two weekly trains run each way and the freight carried largely consists of carpets, wool and dates from Persia and of tea, sugar and piece-goods from the Indian side. Though the railway is primarily strategic in purpose its commercial and political effects will be considerable. The travelling traders (or Powindans) from the trans-frontier area have always pursued their wanderings into India and now instead of doing their trading in towns near the border carry it by train to the large cities in India. The Railway line from Pir to Lankitahina which is complete and open to public traffic now will similarly in course of time develop both the manner and amount of transport communications and trade. The new roads in Waziristan are already largely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The

effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 32 per cent and uncultivated to 68 per cent.

The work of civilisation is now making steady progress, both by the improvement of communications and otherwise. Relations with the tribes have improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered, though in this respect there is complaint against the limitations imposed by financial embarrassments. In the British administered districts 19 per cent. males and 7 per cent. females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low but they are largely affected by the high literacy amongst Sikh women of whom 13.8 per cent. are returned as literate. The inauguration of a system of light railways throughout the Province apart from all considerations of strategy must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914 and the lesser work of the Paharpur Canal, also completed a few years ago will bring ease and prosperity to a number of peasant homes.

Administration

The administration of the North-West Frontier Province is conducted by the Chief Commissioner and Agent to the Governor General in Council. His staff consists of—

- (1) Officers of the Political Department of the Government of India.
- (2) Members of the Provincial Civil Service.
- (3) Members of the Subordinate Civil Service.
- (4) Superintendents and Assistant Superintendents of Police.
- (5) Officers recruited for the service of departments requiring special knowledge—
Military Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the first head above are—

Administration	Chief Commissioner & Agent to the Governor General	5
	Secretary	
	Under Secretary	
	Personal Assistant	
	Revenue Commissioner and Revenue Secretary	
	Resident in Waziristan	1
	Deputy Commissioner	
	Political Agents	5
	District Judges	
	Assistant Commissioners and Assistant Political Agents	12

Judicial Commissioner's Court & Divisional Judges { Two Judicial Commissioners
Two Divisional and Sessions Judges
One Additional ditto }

The districts under the Deputy Commissioners are divided into from two to five sub-divisional areas, in charge of tahsildars who are invested with criminal and civil and revenue powers, and are assisted by namb-tahsildars who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe which is held together by the ties of kinship and ancient ancestry real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon who is also the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses one forest division that of Hazara. There are four divisions of the Roads and Buildings Branch of the Public Works Department each under an Executive Engineer. The Irrigation Department of the P. W. D. is in charge of a Chief Engineer. Irrigation who is also ex-officio Secretary to the Chief Commissioner. The administration of the civil police force of the districts is vested in an Inspector General. There is a special force of Frontier Constabulary. The revenue and expenditure of the Province are wholly Imperial. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all five administered districts is controlled by the Revenue Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions divisions each presided over by a Divisional and Sessions Judge. The two Judicial Commissioners are the controlling authority in the judicial branch of the administration and their Courts are the highest criminal and appellate tribunals in this Province. The improvements needed to bring the judicial administration up-to-date in accord with the growth of the business of administration, are dealt with in the Inquiry Committee's report to which reference was made above. The principal officers in the present Administration are —

Agent to the Governor General and Chief Commissioner The Hon. Sir Horatio Norman Bolton K.C.I.B. C.S.I. L.C.S. (Assumed charge 7th July 1928.)

Personal Assistant Captain N. B. Allington M.C. Resident Waziristan Lt. Col. C. E. Bruce C.I.B., C.B.E.

Judicial Commissioner (Offg.) J. H. R. Fraser, C.I.E. C.B.E.

Additional Judicial Commissioner, K. B. Saad-ud-din Khan, B.A., L.L.B.

Revenue Commissioner (Offg.) T. B. Capeland.

Secretary to Chief Commissioner H. A. F. Metcalfe M.V.O.

Under Secretary to Chief Commissioner, K. P. S. Menon.

Assistant Financial Secretary to Chief Commissioner (Offg.) Lala Guranditta Mal.

Indian Personal Assistant to Chief Commissioner Khan Bahadur Bishal Singh Moghal Bas Khan, I.O.M. I.D.B.M.

Secretary Public Works Department Buildings and Roads Branch Col. C. R. Haswell.

Secretary Public Works Department Irrigation Branch S. Walker.

Deputy Conservator of Forests E. A. Greenwood B.A.

Chief Medical Officer Lieut. Col. C. I. Brierley L.M.S.

Inspector General of Police (Offg.) C. Stoddart C.B.E., M.V.O.

Commandant Frontier Constabulary V. H. Short.

Director of Public Instruction, J. H. Towle L.E.S. M.A.

Superintendent Archaeological Survey, H. Hargreaves.

Divisional and Sessions Judges B. B. Bhal, Lehna Singh, M.B.E. (Derajat) Lt. Col. W. A. Garstin, O.B.E., Sessions Judge (Peshawar).

Political Agents

C. Latimer C.I.B. Dir. Swat and Chitral.

Lt. Col. R. Garratt, Khyber.

Captain C. G. N. Edwards North Waziristan.

Major E. W. C. Noel C.I.B. D.S.O. Kurram.

Captain W. R. Hay, L.A., South Waziristan.

Deputy Commissioners

Lt. Col. M. E. Kac Hazara.

Lt. Col. R. E. H. Griffith C.I.B. I.A. Peshawar.

Major A. B. B. Parsona, C.B.E. D.S.O. I.A.

Bannu.

C. H. Gidney L.C.S., Dera Ismail Khan.

Major Thompson Glover O.B.E., Kohat.

Former Chief Commissioners

Lieut. Col. Sir Harold Deane K.C.B.I. Died 7th July 1903.

Lieut.-Col. Sir George Ross-Koppel C.C.I.B. K.C.B.I. to 9th September 1919.

The Hon. Sir Alfred Hamilton Grant, C.C.I.B. K.C.B.I. from September 1919 to 8th March 1921.

The Hon. Sir John Leader Maffey K.C.V.D. C.S.I., C.I.B. L.C.S. from 8th March 1921 to 6th November 1925.

The Province of Assam, omitting the partly administered and unadministered tracts on its northern and eastern borders comprises an area of some 88,510 square miles. It includes the Assam Valley Division the Burma Valley and Hill Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma, which form the plains of Assam. These two valleys are separated from each other by the Assam Range which projects westward from the hills on the eastern border.

Population

The total population of the Province in 1921 was 7,990,246, of whom 384,018 were in Manipur. Of the population in 1921 2½ millions were Mahomedans 4½ millions Hindus and 1½ millions Animists 44 per cent of the population speak Bengali 22 per cent speak Assamese other languages spoken in the province are Hindi Uriya and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 180 which compared with that of most other parts of India is low but is more than double that of Burma.

Agricultural Products

It has agricultural advantages for which it would be difficult to find a parallel in any part of India. climate soil, rainfall and river systems all being alike favourable to cultivation Rice is the staple food crop, nearly 6 million acres being devoted to this crop. Except in the Himalayan Terai irrigation is unnecessary. Tea and Jute are the most important crops grown for export. The area under tea consists of 420,664 acres. Wheat and tobacco are also grown and about 66 square miles are devoted to sugarcane.

Meteorological Conditions.

Rainfall is everywhere abundant and ranges from 67 to 229 inches. The maximum is reached at Cherrapunji in the Khasi Hills, which is one of the wettest places in the world having a rainfall of 458 inches. The temperature ranges from 59 at Sibsagar in January to 84.8 in July. Earthquakes of considerable severity have taken place by far the worst being that which occurred in 1897.

Mines and Minerals

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills and the Lakhimpur

district where about 350,000 tons are raised annually. Limestone is quarried in the Khasi and Jaintia Hills in Sylhet, and in the Garo hills. Petroleum is worked only in Lakhimpur and Cachar.

An account of the petroleum occurrences in Assam was recently published in the memoirs of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N.E. Assam through Kachar and Chittagong to the Arakan coast, where it has a S.E. trend.

Manufactures and Trade

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women and almost every house contains a loom the cloth is being gradually displaced by imported goods of finer texture and colour. Tea manufacture is the most important industry of the province. Boat building brass and metal and earthenware, and limestone burning are the other industries apart from agriculture which itself employs about 89 per cent of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications.

The trade of Assam is chiefly carried by river but increasing use is being made of the Assam Bengal Railway which runs from the port of Chittagong through the North Cachar Hills to Tinsukia, a station on the Dibrugarh Sadiya Railway, and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Sibsagar at the eastern end of the Surma Valley and another runs through the west of the Assam Valley from Lumding to Gauhati where it effects a junction with the Eastern Bengal Railway. The Eastern Bengal Railway connects Assam with the Bengal system via the valley of the Brahmaputra. The excellence of its water communication makes Assam less dependent upon roads than other parts of India but in recent years the road system has been developed and there is an unmetalled trunk road through the whole length of the Brahmaputra Valley and an excellent road from Gauhati to Shillong. A large fleet of steamers maintained by the India General Steam Navigation Company and the Rivers Steved Navigation Company ply on the rivers of both valleys. An alternate day service of passenger boats runs between Goalundo and Dibrugarh.

THE FINANCES OF ASSAM

In common with the other Provinces of India Assam secured substantial financial autonomy under the Reform Act of 1919. The present financial position is set out in the following table—

Estimated Provincial Revenue for 1927-28.

(In Thousands of Rupees.)

Taxes on Income	5 27
Land Revenue	1,15,24
Excise	71 86
Stamp	23 25

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905 as the result of further deliberations it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912 the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor in Council Bihar Chota Nagpur and Orissa were formed into a separate province while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor in-Council and was thereby ranked with certain minor provisions to suit its undeveloped character with the older major provinces of India.

The capital is Shillong a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6 450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

GOVERNOR.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9 476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44 245 square miles composed of tracts which have from time to time been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 78 484 square miles. The Province embraces an area of 134 688 square miles and according to the census of 1921 it contains 791 625 inhabitants.

The country which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watered drain age of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged barren, sunburnt mountains girt by high chasms and gorges, alternate with rich arid deserts and stony plains the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839. It was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British line of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Clans into a close confederacy. In the Afghan War of 1879 Plain Shorward, Sibi, Zaware Valley and Thal Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrly which has the heaviest rainfall, records no more than 11½ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, provision and care of animals and transport. The majority of the Afghan and the Baluch, as a rule cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the British life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked

extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Makran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 94 public schools of all kinds, with 5 455 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta-Pishin and other centres where the Local Government with its officers stays at certain seasons, such as Sibi and Ziarat, but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Shahrly on the Sind Pishin railway and in the Bolan Pass. The output of coal in 1922-3 was 5 279 tons. Chromite is extracted in the Zhob District near Hindinbagh. The Chrome output fell off owing to poorer demand. Lime-stone is quarried in small quantities. The output of Chromite during 1926-27 amounted to 14 833 tons.

Administration.

The head of the local administration is the officer styled Agent to the Governor General and Chief Commissioner. Next in rank comes the *Revenue Commissioner* who controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self-government by the tribesmen as far as may be by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies which normally numbered 2 500 odd play an unobtrusive but invaluable part in the work of the Civil administration not only in watch and ward and the investigation of crime but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily two irregular Corps in the Province, the Zhob Levy Corps and the Makran Levy Corps. The Province does not pay for itself and receives large subsidies from the Imperial Government.

Agent to the Governor General and Chief Commissioner. The Hon. Sir F. W. Johnston, K.C.I.E., C.S.I. I.C.S.

Revenue and Judicial Commissioner. Lt.-Col. T. H. Keyes, C.M.G. C.I.E.

Secretary Public Works Department, Col. Comdt. G. H. Boulton, C.B., C.M.G. D.S.O.

Secretary to the Agent to the Governor General and Chief Commissioner. R. E. I. Wingate.

Political Agent Zhob. Khan Bahadur Sharbat Khan, C.I.E.

Political Agent Kalat and Bolan Pass. C. L. Cornfield, M.C.

Political Agent and Deputy Commissioner, Quetta. Lt.-Col. J. A. Brett, C.I.E.

Assistant Political Agent and Assistant Commissioner, Quetta P. Porter
Political Agent, Chagun Sardar Khan Sahib Jaffer Khan
Political Agent Subi, Major G. L. Betham M.C.
Assistant Political Agent Subi R. S. Mehta Nihal Chand
Political Agent Loralai, Offg. Capt. D. G. H. de la Fargue
Residency Surgeon and Chief Medical Officer
 Lt. Col. D. J. M. Deas M.B.
Civil Surgeon Subi, Lt. Col. J. Anderson
Assistant Political Agent Zhob Offg. K. S. Murtaza Khan
Civil Surgeon Quetta Lt.-Col. F. E. Wilson M.B.

ANDAMAN AND NICOBAR ISLANDS

This is a group of islands in the Bay of Bengal of which the headquarters are at Port Blair by sea 780 miles from Calcutta 740 miles from Madras and 360 miles from Rangoon, with which ports there is regular communication.

The land area of the islands under the administration is 3,143 square miles, namely 2,608 square miles in the Andamans and 535 square miles in the Nicobars. The total population is 28,459. The islands are administered by the Chief Commissioner of the Andaman and Nicobar Islands who is also the Superintendent of the Penal Settlement. The penal settlement, which was established in 1858, is the most important in India.

Chief Commissioner of Port Blair Lieut. Col. M. L. Ferrar C.B. C.I.E. C.B.E., I.A.

Commandant Military Police Lt. Col. G. C. Wheeler V.C. I.A.

Senior Medical Officer and Civil Surgeon, Major J. M. R. Hennessey M.B.

COORG

Coorg is a small petty Province in Southern India west of the State of Mysore. Its area is 1,582 square miles and its population 174,976. Coorg came under the direct protection of the

British Government during the war with Sultan Tipu of Seringapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Secretariat is at Bangalore where the Assistant Resident is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. A Legislative Council consisting of 15 elected members and five nominated members was created in 1923. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to overproduction and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Chief Commissioner Coorg—The Hon. Mr. S. R. Pearce C.B. I., C.I.E. I.C.S.

AJMER MERWARA.

Ajmer Merwara is an isolated British Province in Rajputana. The Agent to the Governor General in Rajputana administers it as Chief Commissioner. The Province consists of two small separate districts, Ajmer and Merwara with a total area of 2,711 square miles and a population of 501,395. At the close of the Pindari war Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Fifty-five per cent of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oil-seeds and wheat.

Chief Commissioner The Hon. Mr. L. W. Reynolds, C.I.E. M.C.

Aden

Aden was the first new territory added to the Empire after the accession of Queen Victoria. Its acquisition in 1839 was the outcome of an outrage committed by the local Abdali chief upon the passengers and crew of a British bungalow wrecked in the neighbourhood. Various acts of treachery supervened during the negotiations regarding the bungalow outrage and Aden was captured by a force sent by the Bombay Government under Major Baillie. The act has been described as one of those opportune political

strokes which have given geographical continuity to British possessions scattered over the world.

Aden is an extinct volcano five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow isthmus of flat ground. This is nearly covered at one part at high spring tides, but the causeway and aqueduct are always above, though sometimes only just above water. The highest

peak on the wall of precipitous hills that surrounds the old crater which constitutes Aden is 1 775 feet above sea level. Ragged spurs with valleys between radiate from the centre to the circumference of the crater. A great gap has been rent by some volcanic disturbance on the sea surface of the circle of hills and this opens to the magnificent harbour. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1888 and the adjoining tract of Shaikh Othman 39 square miles in extent was subsequently purchased when in 1882, it was found necessary to make provision for an over-flowing population.

Attached to the settlement of Aden are the islands of Perim, an island of 5 square miles extent in the Straits of Bab-el Mandeb in the entrance to the Arabian Sea. Sokotra island at the entrance to the Gulf of Aden in the Arabian Sea, came under the British sphere of influence by a Protectorate treaty in 1886 and 1 382 miles in extent, and the five small Kuria Muria islands ceded by the Imam of Maskat in 1854 for the purpose of landing the Red Sea cable and otherwise valuable only for the guano deposits found upon them. They are off the Arabian coast about two-thirds of the way from Aden to Maskat. The whole extent of the Aden settlement including Aden Little Aden Shaikh Othman and Perim is approximately 80 miles. The 1921 census showed Aden with Little Aden Shaikh Othman, and Perim to have a population of 58,671. The population of Perim is 2 075 largely dependent on the Coal Depot maintained there by a commercial firm. That of Sokotra is 12 000 mostly pastoral and migratory inland fishing on the coast.

Strategic Importance

Aden's first importance is as a naval and military station of strategic importance. This aspect was ably discussed by Colonel A. M. Murray in his *Imperial Outposts*. He points out that Aden is not a naval base in the same sense that Gibraltar, Malta and Hong Kong were made but a *point d'appui* a rendezvous and striking point for the fleet. It was seized in 1839 because of its usefulness as a harbour of refuge for British ships and from a strategist's point of view this is its primary purpose and the reason *d'être* of its forts and garrison. Aden under British rule has retained its ancient prestige as a fortress of impregnable strength invulnerable by sea and by land dominating the entrance to the Red Sea and valuable to its owners as a commercial emporium a port of call and a cable centre. The harbour extends 8 miles from east to west and 4 from north to south and is divided into two bays by a spit of land. The harbour is dredged to 30 below I.S.L.W. and is approached by a dredged cut of the same depth. This cut extends seaward to join the 5 fathom contour and thus gives a depth at low water spring tide of 5 fathoms for vessels entering the Port. The junction of this cut with the 5 fathom contour is marked by the fairway buoy which carries a flashing red light. The bottom is sand and mud. There are several islands in the inner bay. Strategic control of the Red Sea was rendered complete by the annexation of Perim and by a Protectorate treaty with the Sultan of Sokotra, which may

both be regarded as outposts of Aden and are under the political jurisdiction of the Resident.

The Arab chiefs of the hinterland of Arabia are nearly all stipendiaries of the British Government. Colonel Wahab and Mr G. H. Fitzmaurice of the Constantinople Embassy, were appointed in 1902 as Commissioners to delimitate the frontier between Turkish Arabia and the British protectorate around Aden. A convention was signed in 1905 settling details, the frontier line being drawn from Shaikh Murad a point of the Red Sea coast opposite Perim to the bank of the river Bana the eastern limit of Turkish claims at a point some 29 miles north-east of Dhala and thence north-east to the great desert. The area left within the British Protectorate was about 9 000 square miles. The arrangement gave to Turkey Cape Bab-el Mandeb which forms the Arabian bank of the eastern channel past Perim into the Red Sea. A small fort and small British garrison used to be maintained at Dhala which is 7 700 feet high, but the garrison was withdrawn in 1905. Lord Morley explaining this step as being in accordance with the policy stated in the House of Lords in 1903—that His Majesty's Government had never desired to interfere with the internal and domestic affairs of the tribes on the British side of the boundary but had throughout made it plain that they would not assent to the interference of any other Power with those affairs. Affairs in this respect have been disarranged considerably by the war.

British Policy

There has been much criticism of a policy under which Aden has failed to advance with the same progressive strides which have marked the development of other British dependencies. It is said that the former Persian possessors of Aden built its wonderful water tanks, and the Arabs made an aqueduct 20 miles long, while the British have done nothing except mount guns to protect their coal yards. Trade it is argued flourishes because this is a natural emporium of commerce, but not because of the attention its needs get from Government. Lord Roberts, writing on this point a few years ago said: "It is not creditable to British rule to make use of a dependency like Aden for selfish purposes of political necessity without attempting to extend the benefits of civilised Government to the neighbouring native tribes, especially when those tribes are living under the aegis of the British Crown. The Persians, the Turks and even the Arabs did more for Aden in their time than we have done during our seventy years' occupation. Aden has always suffered under the disadvantage of being an appendage of the Bombay Presidency with which it has neither geographical racial nor political affinity. Probably the best solution of the matter would be to hand over the place to the Colonial Office relieving the Government of Bombay of a charge which is only looked upon as an incubus. This question is still under discussion but some important steps have been taken in the past few years to satisfy the commercial needs of the port."

Language

The language of the settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly returned as Arabs and

Shahis. The Somalis from the African coast and Arabs do the hard labour of the port so far as the settlement is concerned the chief industries are salt and cigarette manufacture. The crops of the tribal low country adjoining are *jowar*, sesame, a little cotton madder, a bastard *saffron* and a little indigo. In the hills, wheat, madder fruit coffee and a considerable quantity of wax and honey are obtained. The water supply forms the most important problem. Water is drawn from four sources—wells, aqueducts tanks or reservoirs and condensers that there have recently successfully small artesian wells which may prove superior to all such arrangements. The trade of Aden is mostly transshipment the port serving as a centre of distribution. Its total annual value in recent years has ranged between Rs. 15 crores and Rs. 20 crores.

Administration

The administration of Aden was in former times directly under the Government of Bombay. In 1920 the political control of Aden which was exercised during the period of the war by the High Commissioner of Egypt was retransferred to the Political Resident, Aden who was to be directly responsible to the Foreign Office. In 1921 this responsibility was taken over by the Colonial Office. The future of the Protectorate has been the subject of no little discussion and various proposals have been put forward. At one time the idea that it should be transferred to the Colonial Office was seriously entertained. The proposals met with warm disapproval from the important Indian community in Aden whose views were supported in India. There has been much friction between India and the Colonial Office over the status of Indians in the Dominions and some of the Crown Colonies and the inharmoniousness of the Colonial Office in protecting their rights was much resented. Therefore transfer to the Colonial Office was opposed as transfer to an unknown and unsympathetic administration. On the 11th July 1922 the Under-Secretary of State for the Colonies stated in the House of Commons that there was no prospect of the Colonial Office taking over the control of Aden in the near future. Deliberations between the Government of India and the Imperial Government reached their conclusion during the past year and the decisions finally taken were announced by the Government of India in the Legislative Assembly assembled in Delhi during the Budget debates in March, 1927. The new arrangements came into operation on April 1st 1927. Under the new conditions the Imperial Government are responsible for the military and political situation in Aden and its Hinterland. The settlement of Aden itself which is to a large degree peopled by Indians remains under the Government of India. The financial settlement required by this division of authority provides for the payment by India to Imperial Revenues of £250,000 a year for three years and thence forward of £1,000,000 a year.

The larger amount is considerably less than the annual expenditure falling upon Indian revenues under the former system of control.

The administration is conducted by a Resident, who is assisted by four Assistants. The Resident is also ordinarily General Officer Commanding and has hitherto usually been an officer selected from the Indian army as have his assistants. The Court of the Resident is the Colonial Court of Admiralty under Act XVI of 1891 and its procedure as such is regulated by the Provisions of the Colonial Courts of the Admiralty Act 1890 (53 and 54 Vice Chapter 27). The laws in force in the settlement are generally speaking those in force in the Bombay Presidency supplemented on certain points by special regulations to suit local conditions. The management of the port is under the control of a Board of Trustees formed in 1858. The principal business of the Port Trust has been the deepening of the harbour so as to allow vessels of all sizes to enter and leave at all states of the tide. The Aden police force consists of land and harbour police who number 420 and 54 respectively. There are hospitals and dispensaries in both Aden and Perim in addition to the military institutions of this character. The garrison comprises a troop of engineers, three companies of garrison artillery, one battalion of British Infantry, two companies of sappers and miners and one Indian regiment. Detachments from the last named are maintained at Furim and Shaikh Othman respectively.

Climate

The average temperature of the station is 87 degrees in the shade the mean range being from 75 in January to 98 in June with variations up to 102. The hills between the monsoons, in May and September are very oppressive. Consequently long red jence impairs the facilities and undermines the constitution of Europeans and even Indians suffer from the effects of too long an abode in the settlement, and troops are not posted in the station for long periods, being usually sent there one year and relieved the next. But Aden is exceptionally free from infectious diseases and epidemics, and the absence of vegetation, the dryness of the soil and the purity of the drinking water constitute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from $\frac{1}{2}$ inch to 8 $\frac{1}{2}$ inches with an irregular average of 3 inches.

The Home Government.

The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control with full power and authority to control and direct all operations and concerns relating to the civil and military government and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President the lineal precursor of the Secretary of State for India. With modifications this system lasted until 1858 when the Mutiny followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measure passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control or in the Company, the Directors and the Secret Committee in respect of the government and revenues of India.

The Secretary of State

Until the Reform Act of 1919 came into force the Secretary of State had the unqualified power to give orders to every officer in India, including the Governor General and to superintend direct and control all acts operations and concerns relating to the government or revenues of India. In the relations of the Secretary of State with the Governor-General in Council no express statutory change was made but Parliament ordained through the Joint Select Committee that in practice the conventions governing these relations should be modified, only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

Of the wide powers and duties still vested in the Secretary of State, many rest on his personal responsibility others can be performed only in consultation with his Council and for some of these the concurrence of a majority of the members of his Council voting at a meeting is required. The Act of 1919 greatly modified the rigidity of the law maintained for sixty years as to the relations of the Secretary of State with his Council and he has fuller power than in the past to prescribe the manner in which business is to be transacted. Though in practice the Council meets weekly (save in vacation periods) this has ceased to be a statutory requirement the law now providing that there shall be a meeting at least once in every month.

The India Council.

The number of members of the Council was reduced by the Act to not less than eight and not more than 12, the Secretary of State being free to appoint within those limits. The period of office was reduced from 7 to 5 years, though the Secretary of State may, for special reasons of public advantage to be communicated to

Parliament, re-appoint a member for another five years. Half the Council must be persons who have served or resided in India for at least ten years and who have not left India more than five years before their appointment. The Act restored the old salary of £1,200, with an additional subsistence allowance of £600 for any member who was at the time of appointment domiciled in India. Lord Morley opened the door of the Council to Indians, and since 1917 the number of Indian members has been three.

Associated with the Secretary of State and the India Council is a Secretariat known as the India Office housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council and are subject to the ordinary Home Civil Service rules in all respects.

In the past the whole cost of the India Office has been borne by the revenues of India, except that the Home Government made certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total net cost including pensions has been about £250,000 per annum. In conformity with the spirit of the 1919 Act, an arrangement was made whereby the salary of the Secretary of State is placed on the Home estimates and the cost of the controlling and political functions exercised in Whitehall is also met from British revenues while agency functions alone are chargeable to Indian revenues.

The High Commissionership

The financial readjustment has been accompanied by a highly important administrative change provided for by the Act, in the creation of a High Commissioner for India in the United Kingdom with necessary establishments. From October 1st 1920 the High Commissioner took over control of the purchase of Government Stores in England and the Indian Students Branch together with the supervision of the work of the Indian Trade Commissioner. The further development of the functions and powers of the High Commissioner have included such agency work as the payment of Civil leave allowances and pensions the recruitment of technical officers supervision of I.C.S. and Forest probationers after first appointment the making of arrangements for officers on deputation or study leave repatriation of destitute lascars, sale of Government of India publications etc. The staff of the Stores Department is located at the Depot off the Thames in Belvedere Road Lambeth. The High Commissioner and the rest of the staff at 42, 44 and 46 Grosvenor Gardens, S.W. 1 but a new India House is to be erected for the High Commissioner in Aldwych to the designs of Sir Herbert Baker at an estimated cost of £300,000.

Parliament set up in 1920 a Joint Standing Committee on Indian affairs consisting of eleven members of each House. The purpose is to keep Parliament in closer touch with Indian affairs and to refer to the Committee draft rules and also Parliamentary Bills after they have received a second reading.

The area enclosed within the boundaries of India is 1 773 168 square miles, with a population of 315 182 587 of people—nearly one-fifth of the human race. But of this total a very large part is not under British Administration. The area covered in the Indian States is 675 266 square miles with a population of seventy millions. The Indian States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa in Rajputana, with an area of 12 square miles and the Simla Hill states which are little more than small holdings to States like Hyderabad as large as Italy with a population of thirteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth and Kashmir, one of the most favoured spots on the face of the globe.

Relations with the Paramount Power

So diverse are the conditions under which the Indian States were established and came into political relation with the Government of India that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say when there was no direct heir the Government considered whether public interests would be secured by granting the right of adoption. Through the application of this policy the states of Satara and of Nagpur fell to the East India Company and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown and an irrevocable declaration of policy toward the Indian States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions, and while we will permit no aggression on our dominions or our rights to be attempted with impunity we shall allow no encroachments on those of others. We shall respect the rights dignity and honour of the Native Princes as our own and we desire that they as well as our own subjects should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government. Since the issue of that proclamation there has been no encroachment on the area under Indian rule by the Government of India. On the contrary the movement has been in the opposite direction. In 1851 the State of Mysore which had been so long under British administration that the traditions of Native rule were almost forgotten was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares the great landlord of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India has had to intervene to prevent gross misgovernment or to carry on the administration during a long minority, but always with the underlying intention of restoring the territories as soon as the necessity

or intervention passed. Almost all states possess the right of adoption in default of heir.

Rights of Indian States.

The rights and obligations of the Indian States are thus described by the Imperial Gazetteer. The Chiefs have without exception gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Indian States. The inhabitants of the Indian states are the subjects of their rulers and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to an Indian State must be handed over to it by its authorities, they cannot be arrested by the police of British India without the permission of the ruler of the State. The Indian Princes have therefore a suzerain power which acts for them in all external affairs and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the ports and the markets of British India. Except in rare cases, applied to maritime states they have freedom of trade with British India although they levy their own customs and their subjects are admitted to most of the public offices of the British Government.

Obligations of Indian States.

On the other hand the Indian States are under an obligation not to enter into relations with foreign nations or other states, the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Indian States alike are under an obligation to refer to the British every question of dispute with other states. Inasmuch as the Indian States have no use for a military establishment other than for police or display or for co-operation with the Imperial Government their military forces, their equipment and armament are prescribed by the Paramount Power. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maharajah is absolute logic and public opinion have endorsed the principle which Lord Curzon set forth in his minute of 1880, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbance nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Governor-General in Council is the sole judge subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised

by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where cantonments exist in an Indian State, jurisdiction both over the cantonment and the civil station is exercised by the suzerain power.

Political Officers.

The powers of the British Government are exercised through Political Officers who, as a rule, reside in the states themselves. In the larger states the Government is represented by a Resident in groups of states by an Agent to the Governor-General, assisted by local Residents or Political Agents. These Officers form the sole channel of communication between the Indian States and the Government of India and its Foreign Department with the officials of British India and with other Indian States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted. Political Agents are similarly employed in the larger States under the Provincial Governments, but in the petty states scattered over British India the duties of the Agent are usually entrusted to the Collector or Commissioner in whose district they lie. All questions relating to the Indian States are under the special supervision of the Supreme Government and in the personal charge of the Governor-General.

Closer Partnership

Events have tended gradually to draw the Paramount Power and the Indian States into closer harmony. Special care has been devoted to the education of the sons of Ruling Chiefs first by the employment of tutors and afterwards by the establishment of special colleges for the purpose. These are now established at Ajmer, Rajkot, Indore and Lahore. The Imperial Cadet Corps, whose headquarters are at Dehra Dun imparts military training to the sons of the ruling chiefs and noble families. The spread of higher education has placed at the disposal of the Indian States the products of the Universities. In these ways there has been a steady rise in the character of the administration of the Indian States, approximating more closely to the British ideal. Most of the Indian States have also come forward to bear their share in the burden of Imperial defence. Following on the spontaneous offer of military assistance

when war with Russia appeared to be inevitable over the Pondich incident in 1885 the states have raised a portion of their forces up to the standard of the troops in the Indian Army. These were until recently termed Imperial Service Troops but are now designated Indian State Forces; they belong to the States, they are officered by Indians, but they are inspected by a regular cadre of British officers under the general direction of an Inspector-General. Their numbers are approximately 22,000 men, their armament is the same as that of the Indian Army and they have done good service often under their own Chiefs on the Frontier and in China, in Somaliland and in the Great War. Secure in the knowledge that the Paramount Power will respect their rights and privileges, the Ruling Chiefs have lost the suspicion which was common when their position was less assured and the visits of the Prince of Wales in 1875 of the Prince and Princess of Wales in 1905-06 and of the King and Queen in 1911-12 have tended to seal the devotion of the great feudatories to the Crown. The improvement in the standard of native rule has also permitted the Government of India largely to reduce the degree of interference in the internal affairs of the Indian States. The new policy was authoritatively laid down by Lord Minto the then Viceroy in a speech at Udaipur in 1909 when he said—

Our policy is with rare exceptions, one of non-interference in the internal affairs of the Native States. But in guaranteeing their internal independence and in undertaking their protection against external aggression it naturally follows that the Imperial Government has assumed a certain degree of responsibility for the general soundness of their administration and could not consent to incur the reproach of being an indirect instrument of misrule. There are also certain matters in which it is necessary for the Government of India to safeguard the interests of the community as a whole as well as those of the paramount power such as railways, telegraphs and other services of an Imperial character. But the relationship of the Supreme Government to the State is one of suzerainty. The foundation stone of the whole system is the recognition of identity of interests between the Imperial Government and Durbar and the minimum of interference with the latter in their own affairs.

HYDERABAD

The Nizam exercises full sovereignty within his dominions, grants titles and has the power of life and death over his subjects. Before 1919 the Government consisted of a Prime Minister responsible to the Nizam with Assistant Ministers, but in this year an Executive Council consisting of seven ordinary and one extraordinary member under a President was established. A legislative Council consisting of 20 members of whom 12 are official, 8 non-official and extraordinary is responsible for making laws. The

administration is carried on by a regular system of departments on lines similar to those followed in British India. The state is divided into two divisions—Telingana and Maharatwade—15 Districts and 103 Talukas. Local Boards are constituted in each District and Taluka. The State maintains its own currency which consists of gold and silver coins and a large note issue. The rupee known as the Gomania Rupee exchange with the British Indian rupee at an average ratio of 116-16-8 to 100. There is a State postal

service and stamps for internal purposes. The Nizam maintains his own army consisting of 19,523 troops of which 5,876 are classed as regular troops and 12,580 as irregular. In addition to these there are two battalions of Imperial Service Troops, 1,067 strong.

FINANCE—Hyderabad State is far the wealthiest of the Indian States having a revenue in its own currency of over 7½ crores which is approximately the same as that of the Central Provinces and Bihar and Orissa and double that of any other State. After many vicissitudes its finances are at present in a prosperous condition and it enjoys a large annual surplus of revenue from which a reserve of 15 crores has been built up. This is being used partly as a sinking fund for the purchase of the State railways and partly for the development of the resources of the State. The budget estimates for the present year show a revenue of 788 lakhs under service heads and an expenditure of 734 lakhs inclusive of large sums set aside for development famine insurance and reserve for re-organisation and development. The capital expenditure programme provides for an expenditure of 136 lakhs which includes 68 lakhs for the large irrigation project known as Nizam Sagar and other sanctioned projects and 67 lakhs for the completion of the Kaspet-Bellurshah line which is the last link in the direct route between Madras and Delhi and for the construction of feeder lines. The year opened with a cash balance of 495 lakhs which is expected to increase to about 520 lakhs by the end of the year. The Government loans stand at 1084 for short term and 116 for long term issues.

PRODUCTION AND INDUSTRY—The principal industry of the State is agriculture which maintains 57 per cent of the population. The common system of land tenure is ryotwari. About 55 per cent of the total area is directly administered by the State. The rest consists of private estates of His Highness the Nizam which comprise about one-tenth of the total area of the State and the estates of the Jagirdars and Patil nobles. The total land revenue is over 3 crores. The principal food crops are millet and rice; the staple money crops cotton, which is grown extensively on the black cotton soils, and oilseeds. Hyderabad is well known for its Gherani cotton which is the longest staple indigenous cotton in India. The total area under cotton exceeds 3 million acres. Hyderabad possesses the most southerly of the Indian coal measures and the whole of southern India is dependent on it for such coal as is transported by rail. The chief mine is situated at Singareni which is not far from Bowdha junction on the Calcutta Madras line. The chief manufacturing industry is based on the cotton produced in the State. There are five large mills in existence and others are likely to be established while about one-third of the cloth worn in the Dominion is produced on local hand looms. There are about 250 spinning and pressing factories in the cotton tracts and also a number of tanneries and flour mills. The Shahabad Cement Co. which has been established at Shahabad on the Great Indian Peninsula Railway line, not far from Wadi, supplies the whole of southern India with cement and has at present an annual output of about 40,000 tons.

TAXATION—Apart from the land revenue which as stated above brings in about 3 crores the main sources of taxation are excise and customs. The receipts from each are estimated for the present year at 1.59 and 13.5 lakhs respectively. After these come interest on investments (43 lakhs), railways (33 lakhs) and Berar rent (29 lakhs). The customs revenue is derived from an *ad valorem* duty of 5 per cent on all imports and exports.

COMMUNICATIONS—One hundred and thirty-seven miles of broad gauge line from Bombay to Madras traverse the State. At Wadi on this section the broad gauge system of the Nizam's Guaranteed State Railway takes off and running east through Hyderabad (11½ miles) and Warangal reaches the Calcutta Madras line at Bowdha a total length of 380 miles. From Kaspet near Warangal on this line a new link to Bellurshah strikes north. Trains are now running as far as Ramagundam a distance of nearly 54 miles, and the rest of the line will be opened during the present year. From Secunderabad the metre gauge Godavari Valley railway runs north west for 586 miles to Mannard on the main line of the Great Indian Peninsula Railway to Calcutta. A metre gauge line also runs south from Secunderabad through Mahbubnagar nearly to the border and is now being linked up with Kurnool on the Madras and Southern Mahratta Railway. Thus with branch lines there are now 525 miles of broad gauge and 581 of the metre gauge in the State. The Barst Light Railway also owns a short extension from Kurnool to the Bombay Madras line at Latur in Osmanabad District. The Nizam's Guaranteed State Railway is worked at present by a Company but H. H. the Government has provided a large proportion of the capital outlay and has the option of purchase at stated intervals, the earliest of which is in the year 1934. The road system is incomplete at present but is being rapidly extended on a well considered programme.

EDUCATION—The Osmania University at Hyderabad imparts instruction in all the faculties through the medium of Urdu. English being taught as a compulsory language and it has one First Grade College and four Intermediate Colleges. The Nizam College at Hyderabad (First Grade) is however affiliated to the Madras University. In 1924-25 the total number of Educational Institutions rose from 3,555 (1918-19) to 4,001 the number of Primary Schools in particular having been largely increased.

EXECUTIVE COUNCIL—Raja Rajayan Rajah Sir Kishan Pershad Maharaja Bahadur Yaminas Saltanath G.I.F. President. Nawab Walid Dowlat Bahadur Pashaion. Medical and Military Departments Member. Nawab Nizam Jung Bahadur G.I.F. O.B. Political Member. Nawab Hydar Nawaz Jung Bahadur Finance and Railways Member. Lt. Col. Chensiv Trench G.I.F. O.B. Revenue and Police Member. Dr. Nawab Sir Amin Jung Bahadur K.C.I.E. C.S.I. LL.D. Law Member. Nawab Aqel Jung Bahadur Public Works Member. and Nawab Sir Faridood Mulk Bahadur K.C.I.E. C.S.I. O.B. Extraordinary Member.

BRITISH RESIDENT—The Hon. ble Sir William P. Barton, K.C.I.E. O.B.L.

MYSORE

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and the north west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south west by Coorg. It is naturally divided into two regions of distinct character the hill country (the maidan) on the west and the wide spreading valleys and plains (the maidan) on the east. The State has an area of 29,469 square miles excluding that of the Civil and Military Station of Bangalore and a population of 5,978,892 of whom over 92 per cent are Hindus. Kannada is the distinctive language of the State.

HISTORY—The ancient history of the country is varied and interesting. Tradition connects the table land of Mysore with many a legend enshrined in the great Indian epics the Ramayana and the Mahabharata. Coming down to historical times the north-eastern portion of the country formed part of Asoka's Empire in the third century B.C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A.D. Mysore was ruled by three dynasties the north-western portion by the Kadambas the eastern and northern portions by the Pallavas and the central and the southern portions by the Gangas. In the eleventh century Mysore formed part of Chola dominion, but the Cholas were driven out early in the twelfth century by the Hoysalas an indigenous dynasty with its capital at Halebidu. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar empire. At the end of the fourteenth century Mysore became associated with the present ruling dynasty. At first tributary to the dominant empire of Vijayanagar the dynasty attained its independence after the downfall of Vijayanagar in 1635. In the latter part of the eighteenth century the real sovereignty passed into the hands of Hyder Ali and then his son, Tipu Sultan. In 1799 on the fall of Seringapatam the British Government restored the State comprised within its present limits to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wodeyar Bahadur III. Owing to the insurrections that broke out in some parts of the country the management was assumed by the British Government in 1831. In 1881 the State was restored to the dynasty in the person of Sri Chamarajendra Wodeyar Bahadur under conditions and stipulations laid down in the Instrument of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Seshadri Iyer K.C.S.I. as Dewan, brought Mysore to a State of great prosperity. He died in 1894 and was succeeded by the present Maharaja Colonel Sir Sri Krishnarajendra Wodeyar Bahadur K.C.S.I. C.S.I. who was installed in 1903. In November 1913 the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore.

ADMINISTRATION—The City of Mysore is the Capital of the State, but Bangalore City is the Administrative headquarters. His Highness the Maharaja is the ultimate authority in the

State and the administration is conducted under his control by the Dewan and three Members of Council. The Chief Court consisting of three Judges is the highest Judicial tribunal in the State. There are two constitutional Assemblies in the State—the Representative Assembly and the Legislative Council. The Representative Assembly was established in 1881 by an executive order of Government and its powers and functions have been increased from time to time by similar orders of Government. Under the scheme of constitutional developments announced in October 1923 the Representative Assembly has been placed on a statutory basis and given a definite place in the constitution by the promulgation of the Representative Assembly Regulation XVIII of 1923. The franchise has been extended and the disqualification of women in the ground of sex from exercising the right to vote has been removed. The privilege of moving resolutions on the general principles and policy underlying the budget and on matters of public administration has been granted in addition to those already enjoyed of making representations about wants and grievances and of interpellating Government. The Assembly is also to be consulted on all proposals for the levy of new taxes and on the general principles of all measures of legislation before their introduction into the Legislative Council. Besides the Budget Session (formerly Birthday Session) and the Durbar Session, provision has been made for one or more special sessions of the Assembly to be summoned by Government when the State or public business demands it.

The strength of the Legislative Council has been raised from 30 to 50 of whom 20 are official and 30 are non-official members. The Council which exercised the privileges of interpellation discussion of the State Budget and the moving of the resolutions on all matters of public administration is under the reformed constitution granted the powers of voting on the demands for grants. The Dewan is the Ex-officio President of both the Representative Assembly and the Legislative Council.

The Legislative Council has also a Public Accounts Committee which examines all audit and appropriation reports and brings to the notice of Council all deviations from the wishes of the Council as expressed in its Budget grant.

STANDING COMMITTEES—With a view to enlarge the opportunities of non-official representatives of the people to influence the every day administration of the State three Standing Committees consisting of Members of the Representative Assembly and the Legislative Council have been formed, one in connection with Railway, Electrical and P. W. Departments, one in connection with Local Self-Government and the Departments of Medicine, Sanitation and Public Health and the third in connection with Finance and Taxation.

All the important branches of the administration are controlled by separate Heads of Departments. The combatant strength of the Military Force at the end of 1926-27 was 2,270 of which 501 were in the Mysore Lancers, 122 in the

Mysore Horse 100 in the Transport Corps and the remaining 1 537 in the Infantry The total annual cost is about 16 62,884 The cost of the Police Administration during 1925 26 substitute was about 16 lakhs

FINANCES—The actual total receipts and disbursements charged to Revenue for the past five years together with the revised budget estimate for 1926-27 and budget for 1927-28 were as below —

Year	Receipts	Disbursements	Surplus	Deficit
	Rs	Rs	Rs	Rs
1921-22	3 12 05 880	2 27 45 478		— 15,40,000
1922-23	3 30 70 534	3,30 47 807	+ 22 637	
1923-24	3 32 57 262	3 32 02 060	+ 55 202	
1924-25	3 39 52 290	3 39 35 870	+ 16,420	
1925-26 (Actuals)	3 46 36 960	3 46 02 636	+ 34 324	
1926-27 (revised)	3 30,2, 000	3 42 77 000		— 7 50,000
1927-28 (budget)	3 40 10 000	3 39 80 000	+ 30 000	

AGRICULTURE—Nearly three-fourths of the population are employed in agriculture and the general system of land tenure is ryotwari. The principal food crops are ragi, rice, jowar, millets, gram and sugar cane and the chief fibres are cotton and sun hemp. Nearly fifty thousand acres are under mulberry the silk industry being the most profitable in Mysore next to Gold Mining. A Superintendent of Sericulture has been appointed and the Sericulture Department affiliated to the Industries and Commerce Department. Arrangements are being made for the supply of disease-free seed and a central and five tank popular schools have been doing good work. The Department of Agriculture is popularising agriculture on scientific lines by means of demonstrations, investigations and experiments. There are four Government Agricultural Farms at Hebbal, Babbur (near Hivirur), Marthur and Halebennur. A live-stock section has been organised which has been taking necessary steps for the improvement of live stock.

INDUSTRIES AND COMMERCE—A Department of Industries and Commerce was organised in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters. The sandal wood oil factory started on an experimental basis is now working on a commercial scale. A factory is working at Bangalore and another at Mysore. A large plant at a cost of more than 170 lakhs of rupees has been constructed at Bhadravathi for purposes of manufacturing charcoal pig iron distilling wood alcohol and developing subsidiary

industries. The works are on the borders of an extensive forest area and practically at the foot of the hills containing rich deposits of iron, manganese and bauxite and are not far from the Gersoppa Water Falls estimated to be capable of producing 100 000 horsepower of electric energy.

EDUCATION—A separate University for Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central Engineering and Medical Colleges at Bangalore and the Maharaja's and Maharani's Colleges at Mysore, with headquarters at Mysore. The colleges are efficiently equipped and organised and there is a training college for men located at Mysore. The Maharani's College at Mysore is a College for Women.

With the introduction of compulsory education in select centres and the increase in the number of village schools, primary education has during recent years made considerable advance. Schools have been started for imparting instruction in agricultural, commercial, engineering and other technical subjects. There were altogether in 1925-26 6 893 public and 1 173 private educational institutions in the State. This gives one school to every 3 66 square miles of the area and to every 726 of the population.

Resident in Mysore and Chief Commissioner of Coorg—The Hon Mr G E Pears, C.S.I., C.M.E.

Deputy—Amin ul Mulk Mirza, Mahomed Ismail, C.I.E., C.M.E.

Members of the Executive Council—K Chandy, B.A., First Member of Council; Rajkarnyaprasanna Diwan Bahadur, M. N. Krishna Rao, B.A., Second Member of Council and C. S. Balasundaram Iyer, B.A., Third Member of Council.

BARODA

The State of Baroda is situated partly in Gujarat and partly in Kathiawar. It is divided into four district blocks: (1) the southern district of Navsari near the mouth of the Tapi river, and mostly surrounded by British territory, (2) central district, North of the Narbadi, in which lies Baroda, the capital city, (3) to the North of Ahmedabad the district of Kadi, and (4) to the West in the Peninsula of Kathiawar the district of Amroli formed of scattered tracts of land. The area of the State is 8135 square miles, the population is 2,128,522 of whom over four fifths are Hindus.

HISTORY—The history of the Baroda State as such dates from the break up of the Mughal Empire. The first Maratha invasion of Gujarat took place in 1705. In later expeditions Pijaji Galkwar who may be considered as the founder of the present ruling family greatly distinguished himself. Songhad was the headquarters till 1766. After 1723 Pijaji regularly levied tribute in Gujarat. His son Damaji finally captured Baroda in 1784, since then it has always been in the hands of the Galkwars, but Mughal authority in Gujarat did not end until the fall of Ahmedabad in 1768, after which the country was divided between the Galkwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1788, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I, Feroz Rao, Manaji Rao and Govind Rao. The last died in 1800 and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help of the Bombay Government who established the authority of Anand Rao at Baroda. By a treaty of 1805 between the British Government and Baroda it was arranged under which the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged. Baroda was a staunch ally of the British during the wars with Bajji Rao, Peshwa the Pindari hordes and Holkar. But from 1820 to 1841 when Sayaji Rao II was Galkwar differences arose between the two Governments, which were settled by Sir James Carnarvon Governor of Bombay in 1841. Ganpat Rao succeeded Sayaji Rao in 1847. During his rule the political supervision of Baroda was transferred to the Supreme Government. His successor Khande Rao who ascended the Gads in 1856 introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for notorious misconduct and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre, the Resident was not proved. Sayaji Rao III a boy of 13 years of age who was descended from a distant branch of the family was adopted as heir of Khande Rao in 1875 and is the present Galkwar. He was invested with full powers in 1881.

ADMINISTRATION—An executive council consisting of the principal officers of the State carries on the administration subject to the control of the Maharaja, who is assisted by a Dewan and other officers. A number of departments have been formed which are presided over by officials corresponding to those in British India. The State is divided into four *prants* each of which is sub-divided into *Mahals* and *Peta Mahals* of which there are in all 42. Attempts have for some years been made to restore village autonomy and village panchayats have been formed which form part of a scheme for local self government. There is a Legislative Department under a Legal Remembrancer which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court appeals lie in certain cases to the Maharaja, who decides them on the advice of the *Huzur Nyaya Sabha*. The State Army consists of 5,088 Regular forces and 3,806 Irregular forces.

FINANCE—In 1925-26 the total receipts of the State were Rs. 23,06,786 and the disbursements Rs. 19,73,245. The principal Revenue heads were—Land Revenue Rs. 1,12,27,148; Abkari Rs. 30,97,795; Opium Rs. 8,39,682; Railways Rs. 14,11,090; Interest Rs. 10,13,463. Tribute from other States Rs. 6,16,852. British Currency was introduced in 1901.

PRODUCTION AND INDUSTRY—Agriculture and pasture support 83 per cent of the people. The principal crops are rice, wheat, gram, castor oil, rapeseed, poppy, cotton, sun-hemp, tobacco, sugarcane, maize, and garden crops. The greater part of the State is held on ryotwari tenure. The State contains few minerals, except sandstone which is quarried at Songar and a variety of other stones which are little worked. There are 88 industrial or commercial concerns in the State registered under the State Companies' Act. There are four Agricultural Banks and 781 Co-operative Societies in the Baroda State.

COMMUNICATIONS—The B. B. & C. I. Railway crosses part of the Navsari and Baroda *prants* and the Rajputana Malwa Railway passes through the Kadi *prant*. A system of branch lines has been built by the Baroda Durbar in all the four *prants* in addition to which the Tapi Valley Railway and the Baroda Godhra Chord line (B. B. & C. I.) pass through the State. The Railways constructed by the State are about 669 miles in length. Good roads are not numerous.

EDUCATION—The Education Department controls 2,96 institutions of different kinds, in 75 of which English is taught. The Baroda College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and uncivilised castes. The State is in a way pledged to the policy of free and compulsory primary education. It maintains a system of rural and travelling

Libraries. Ten per cent. of the population is returned in the census as literate. Total expense on Education is Rs 31,35 215

CAPITAL CITY.—Baroda City with the cantonment has a population of 94,712. It contains a public park, a number of fine public buildings, palaces and offices and it is crowded with Hindu temples. The cantonment is to the north-west of the city and is garrisoned by an infantry battalion of the Indian Army. An

Improvement Trust has been formed to work in Baroda City and has set itself an ambitious programme.

RULERS.—His Highness Farzand-i-Khas-i-Dowlat-i-Englishtia Maharaja Sir Sayaji Rao Gaekwar Sena Khao Khel Samsher Bahadur G.C.S.I., G.C.I.E., LL.D. Maharaja of Baroda. Resident.—Lt. Col. R. J. C. Burke (Offg.) Decon.—Rao Bahadur V. T. Arishnamachari, C.I.E.

BALUCHISTAN AGENCY

In this Agency lies the State of Kalat with its feudatory State of Las Bela.

Kalat is bounded on the North by the Chagai district, on the East by Sindh and the Marri Bugti tribal territories, on the South by the Arabian Sea and on the West by Persia.

The State includes the tribal territories of the Chiefs of the Brahui Confederacy of which the Khan of Kalat is Head. The divisions of the State are Sarawan or the Highlands Jhalawan or the Lowlands Kachhi Makran the Khanate of Kharan and the feudatory State of Las Bela. The inhabitants are for the most part Brahui or Baloch both being Muhammadans of the Sunni sect. The area of Kalat with Las Bela is 80,410 sq. miles. The country is sparsely inhabited the total population being about 379,000.

The relations of Kalat with the British Government are governed by the treaties of 1854 and 1875 by the latter of which the independence of Kalat was recognized while the Khan agreed to act in subordinate co-operation with the British Government. There are also agreements with Kalat in connection with the construction of the Indo-European telegraph line, the cession of jurisdiction on the railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad.

The Khan is assisted in the administration of the State by a Wazir-i-Azam, at present a retired officer of the British service. The Governor-General's Agent in Baluchistan conducts the relations between the Government of India and the Khan and exercises general political supervision over the State. The revenue of the State is about Rs 16,00,000, out of which the Khan retains a civil list of Rs 8,50,000 per annum. The present Khan is His Highness Beglar Begi Sir Mir Mahmud Khan of Kalat G.C.I.E. He was born in 1884.

Las Bela is a small State under the suzerainty of Kalat. The Hab river for the Southern part of its course forms the Eastern boundary with Sind and the greater part of the State consists of the valley and the delta of the Puruli river. Area 7,132 square miles, population 50,696, chiefly Sunni Muhammadans. The estimated average revenue is about Rs 3,70,000. The Chief of Las Bela known as the Jam is bound by agreement with the British Government to conduct the administration of his State in accordance with the advice of the Governor-General's Agent. This control is exercised through the Political Agent in Kalat. The Jam also employs an approved Wazir to whose advice he is subject and who assists him generally in the transaction of State business.

Agent to the Governor-General for Baluchistan—Honble Mr F. W. Johnston G.S.I., G.C.I.E. I.C.S.

RAJPUTANA AGENCY

Rajputana is the name of a great territorial circle with a total area of about 131,698 square miles, which includes 10 Indian States, one chieftainship and the small British district of Ajmer Merwara. It is bounded on the west by Sind, on the north-west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab on the east by the United Provinces and Gwalior while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Indian States 17 are Rajput 2 (Rharatpur and Dholpur) are Jat, and one (Tonk) is Mahomedan. The Chief administrative control of the British district is vested ex-officio in the political officer, who holds the post of Governor-General's Agent for the supervision of the relations between the several Indian States of Rajputana and the Government of India. For administrative purposes they are divided into the following groups—Bikaner, Bikaner and Jhalawar in direct relations with the Agent to the Governor-General, Eastern Rajputana Agency States (Rharatpur, Dholpur, Kargul, Alwar and Kotah), Haroti

and Tonk Agency, 3 States (Bundi, Shahpura and Tonk) and the Chieftainship of Bhappura. Jaipur Residency 2 States (principal State Jaipur) Mewar Residency and Southern Rajputana States Agency 3 States (principal State Banswara) and the Kuchalgah Chieftainship. Western Rajputana States Residency, 2 States (principal State, Marwar).

The Aravalli Hills intersect the country almost from end to end. The tract to the west of the hills is as a whole sandy ill-watered and unproductive but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravalli Hills is higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

COMMUNICATIONS.—The total length of railways in Rajputana is 1,574 miles of which 73 are the property of the British Government. The B. & C. I. (Metre-gauge) (Government)

from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Indian State railways the most important are the Jodhpur and Bikaner lines from Marwar Junction to Hyderabad (Sind) and to Bikaner.

INHABITANTS.—Over 50 per cent of the population are engaged in some form of agriculture about 20 per cent of the total population are maintained by the preparation and supply of material substances personal and domestic service provides employment for about 5 per cent and commerce for 24 per cent of the population. The principal language is Rajasthani. Among castes and tribes the most numerous are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis and Beldis. The Rajputs are of course the aristocracy of the country and as such hold the land to a very large extent either as receivers of rent or as cultivators. By reason of their position as integral families of pure descent as a landed nobility and as the kinsmen of ruling chiefs they are also the aristocracy of India and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from or irregular connection with, one of these Rajput stocks.

The population and area of the States are as follows—

Name of State	Area in square miles	Population in 1921
<i>In direct Political relations with A. G. G.—</i>		
Bikaner	23,815	659,685
Sirohi	1,908	186,639
Jhalawar	810	98,182

Karauli	1,242	133,730
Alwar	9,141	701,144
Kotah	5,684	630,060

Udaipur State (also called Mewar) was founded in about 646 A.D. The capital city is Udaipur which is beautifully situated on the slope of a low ridge the summit of which is crowned by His Highness the Maharana's palaces and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur Chitor Railway 697 miles north of Bombay. The present ruler is His Highness Maharaja Bhira Maharana Sir Pate Singh Bahadur G.C.S.I. G.C.I.E. G.C.V.O., who was born in 1849 and succeeded in 1884. He is the head of the Sisodia Rajputs and is the Premier Chief. The administration is carried on by the Maharana assisted by Shriman Maharaj Kumar Sir Bhopal Singh Bahadur, K.C.I.E. to whom His Highness has delegated certain powers. The revenues and expenditure of the State are now about 45 and 48 lakhs a year respectively. Udaipur is to be rich in minerals which are little worked. Its archaeological remains are numerous and stone inscriptions dating from the third century have been found.

Banswara State is the southernmost State of Rajputana within the Political Agency of the Southern Rajputana States. The area of the State is 1,046 square miles and population 219,824 souls including Patta Kushalnagar. It is thus in regard to size eleventh among the States of Rajputana. Banswara with Dungarpur originally formed a country known as Bagar which was from the beginning of the 13th century until about the year 1529 held by certain Rajput Chiefs of the Gheilot or Sisodia clan who claimed descent from an elder branch of the family now ruling in Udaipur. After the death of Udal Singh the ruler of Bagar his territory was divided between his two sons Prithi Singh and Jagmal Singh, about 1529 and the descendants of the two families are the present Chiefs of Dungarpur and Banswara. Where the town of Banswara now stands there was a large Bhil pal or colony under a powerful Bhil Chieftain named Wama, who was defeated and slain by Jagmal about 1530. The name Banswara is by tradition said to be a corruption of Wamawara or the country of Wama. Others assert that the word means the country (wara) of bamboos (bans). Nearly three centuries after its foundation by Jagmal, Maharawal Bijai Singh anxious to get rid of the supremacy of the Marhattas offered to become a tributary to the British Government. In 1818 a definite treaty was made with his successor Maharawal Umed Singh. Banswara has been described as the most beautiful portion of Rajputana. It looks at its best just after rains. The principal rivers are the Mahi, the Anas, the Eran, the Chap and the Haran.

The present Chief is His Highness Ral Rayan Maharawal Sahib Shree Prithi Singh Bahadur who was born on July 15 1888, and is the 21st in descent from Maharawal Jagmal Singh. His Highness was educated in the Mayo College and succeeded his father in 1913. His Highness is entitled to a salute of 15 guns. The State is ruled by the Maharawal with the assistance of the Diwan and the Judicial and Legislative Council of which the Diwan is the President. The Revenue of the State is about 9 lakhs and the normal expenditure is about the same.

Diwan—Mr N Bhattacharyya, M.A.

Dungarpur State with Banaswara, formerly comprised the country called the Bagar. It was invaded by the Mahattas in 1818. As in other States inhabited by hill tribes it became necessary at an early period of British supremacy to employ a military force to coerce the Bhils. The State represents the God, of the eldest branch of the Sisodiyas and dates its separate existence from about the close of the 12th Century. Samant Singh King of Chitor when driven away by Kirtipal of Jalor, fled to Bagad and killed Chowastmal Chhet of Baroda, and founded the State of Dungarpur. The present Chiefs His Highness Rai Bayan Maharawal Shri Lakshman Singhji born on 7th March 1908 and succeeded on 15th November 1918. His Highness being minor the administration is carried on by the Executive Council of the State under the supervision of the Political Agent Southern Rajputana States. No railway line crosses the territory the nearest railway station, Udaipur being 60 miles distant. Revenue about 6½ lakhs.

Partabgarh State also called the Khatwal, was founded in the sixteenth century by a descendant of Rana Mokal of Mewar. The town of Partabgarh was founded in 1698 by Partab Singh. In the time of Jaswant Singh (1775-1844) the country was overrun by the Marathas and the Maharawat only saved his State by agreeing to pay Holkar a tribute of *Sulim Shahi* Rs 72,700 (which then being outlaid in the State Mint was legal tender through out the surrounding Native States) in lieu of Rs 15,000 formerly paid to Delhi. The first connexion of the State with the British Government was formed in 1804 but the treaty then entered into was subsequently cancelled by Lord Cornwallis, and a fresh treaty by which the State was taken under protection was made in 1818. The tribute to Holkaris paid through the British Government and in 1904 was converted to Rs 36,350 British currency. The present ruler is His Highness Maharawat Sir Raghnath Singh Bahadur K.C.I.E. who was born in 1859 and succeeded in 1890. The State is governed by the Maharawat with the help of the Dewan and in judicial matters, of a Committee of eleven members styled the Raj Sabha or State Council. Revenue about 6 lakhs expenditure nearly 5 lakhs. The financial administration is under the direct supervision of the State.

Jodhpur State the largest in Rajputana also called Marwar consists largely of sandy country. The Maharaja of Jodhpur is the head of the Rathor Clan of Rajputs and claims descent from Rana, the delfid king of Ayodhya. The earliest known king of the clan lived in the sixth century from which time onwards their history is fairly clear. After the breaking up of their Kingdom at Kanauj they founded this State about 1212 and the foundations of Jodhpur City were laid in 1459 by Rao Jodha. The State entered into a treaty of alliance with the British Government in 1818. Jaswant Singh succeeded in 1873 and reformed the State. His son Sardar Singh was invested with powers in 1898, the minority rule having been carried on by his uncle Maharaja Sir Pratap Singh. He died in 1911 and was suc-

ceeded by his eldest son Maharaja Sumar Singh Bahadur who was then 14 years of age. The administration of the State was carried on by a Council of Regency, provided over by General Maharaja Sir Pratap Singh. On the outbreak of the European War both the Maharaja and the Regent offered their services and were allowed to proceed to the Front. The young Maharaja was for his services at the Front honoured with an Honorary Majority in the British Army and K.B.E. and was invested with full ruling powers in 1916 and died on 3rd October 1918. He was succeeded by his younger brother Major Maharaja Sir Umed Singhji Sahib Bahadur K.C.S.I., K.C.V.O., who on attaining majority has taken over charge of the administration from the 27th January 1923. Revenue Rs 1,20,00,000 expenditure Rs 100 lakhs.

Jaisalmer State is one of the largest States in Rajputana and covers an area of 16,062 square miles. The Rulers of Jaisalmer belong to the Jadon clan and are the direct descendants of Krishna. Jaisalmer City was founded in 1156 and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844 after the British conquest of Sind the forts of Shahgarh, Garsia and Ghotaru, which had formerly belonged to Jaisalmer, were restored to the State. The present Ruling Prince is His Highness Maharajadhiraj Maharawal Shri Sir Jawahar Singhji Bahadur, K.C.S.I. Revenue about four lakhs.

Sirohi State is much broken up by hills of which the main feature is Mount Abu 5,650 feet. The Chiefs of Sirohi are Desra Rajputs a branch of the famous Chauhan clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mina tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharajadhiraj Maharao Shri Sir Sarup Ram Singh Bahadur K.C.B.I. The State is ruled by the Maharao with the assistance of Ministers and other officials. Revenue about 10½ lakhs expenditure 10 lakhs.

Jaipur is the fourth largest State in Rajputana. It consists for the most part of level and open country. It was known to the ancients as *Matsya Desh* and was the kingdom of the King Virata mentioned in the Mahabharata. In whose court the five Pandava brothers during their last period of exile resided. Bhairat in the Jaipur State has been identified.

The Maharaja of Jaipur is the head of the Kachawa clan of Rajputs which claims descent from Kush son of Rama, King of Ayodhya, the famous hero of the famous epic poem the Ramayana. This dynasty in Eastern Rajputana dates as far back as ninth century A.D. Dulha Rai one of its most early rulers, made Amber the capital of the State in 1037 A.D. About the end of 12th century one of the rulers Pajun at the head of the army of Prithvi Raj Emperor of Delhi defeated Shahabuddin Ghori in the Khyber Pass and pursued him as far as Ghasni. Prithvi Raj had given his sister in marriage to him. History of India records several distinguished rulers of Jaipur from

amongst whom the following require particular mention: **Man Singh 1590-1615**. He was a victorious general intrepid commander and tactful administrator whose fame had spread throughout the country. During most troublous times, he maintained imperial authority in Kabul and was the brilliant character of Akbar's time. **Maharaja Sawai Jai Singh II (1780-44)** was the first town planner in India. He removed the capital of the State to Jaipur so named after him. During his time the State acquired great power and fame. He was a great mathematician and scientist of his age, and is famous for his astronomical observatories which he built at several important centres in India. His court was visited by foreign astronomers. **Maharaja Sawai Ram Singh 1835-1880**. He was one of the most enlightened princes in India at that time. He encouraged art and learning. He embellished the city in various ways and improved the administration and material condition of the people. **Maharaja Sawai Madho Singh II 1850-1922**. He was a very wise and intelligent ruler who followed in the foot-steps of his father. He maintained and steadily improved all the useful measures initiated by the late Maharaja. His administration is characterized by great liberality, catholicity and a broad outlook on affairs. His deep religious devotion and piety and unswerving generosity and genuine and active sympathy are well known. His staunch loyalty and maintenance of the traditions of his house raised him in the estimation of the paramount power. He passed away after a long reign of 41 years. His late Highness' donations and subscriptions to works of charity are enormous and too numerous to detail. His Highness the present Maharaja **Sawai Man Singh II Bahadur** was born on 21st August 1911. He was adopted by His late Highness on 24th March 1921. He is a scion of the Rajawat House of Isarda, and ascended the gadi on the 7th September 1922, and was married to the Sister of the present Maharajah of Jodhpur on the 30th January 1924. He is studying at the Mayo College and promises to be an ideal ruler having given abundant evidence already of the keen and sympathetic interest he takes in all that concerns the welfare of his people and mankind in general.

During the minority of the present Ruling Prince the administration is carried on by a Council of State. A Chief Court of Judicature was established in 1924. The army consists of Cavalry Infantry Transport and Artillery. The normal revenue is about one crore and twenty five lakhs and expenditure about one crore and twenty lakhs. According to the Census of 1921 the population of the State is 23,38,802. In area it is 15,670 sq. miles.

Kishangarh State is in the centre of Rajasthan and consists practically of two narrow strips of land separated from each other with an area of 858 square miles (population 77,794), the northern mostly sandy the southern generally fertile. The Ruling Princes of Kishangarh belong to the Rathor clan of Rajputa and are descended from Maharaja Kishan Singh (second son of Maharaja Udal Singh of Jodhpur) who founded the town of Kishangarh in 1611. The present ruler is His Highness **Umdae Rajpal**

Buland Makan Maharajah Dhiraj Dikshit Tagorani Singh Bahadur. He was born on the 26th January 1896 and was educated at the Mayo College Aimer where he passed the Diploma Examination. He was married to the sister of Raja Bahadur Makenchangarh in May 1915 and a son Maharajkumar Yarendra Singhji was born of this marriage on the 5th May 1916. He went to England and travelled on the Continent with His Late Highness in 1921. On the demise of His Late Highness on 25th September 1926 he succeeded to the Gaddi on the 23rd November 1926. He administers the State with the help of a Council. Revenue about 9 lakhs and expenditure 8 lakhs.

Lawa State or Chief of Rajputana is a separate chieftainship under the protection of the British Government and independent of any Native States. It formerly belonged to Jaipur and then became part of the State of Tonk. In 188 the Nawab of Tonk murdered the Thakur's uncle and his followers and Lawa was then raised to its present State. The Thakur of Lawa belonged to the Naruka sect of the Kachwaha Rajputs. The present Thakur **Raghunath Singh** was born in 1890 and succeeded to the estate in January 1923. Revenue about Rs 20,000.

Bundi State is a mountainous territory in the south-east of Rajasthan. The Ruler of Bundi is the head of the Hara sect of the great clan of Chahaman Rajputs and the country occupied by this sect has for the last five or six centuries been known as Haroti. The State was founded in the early part of the thirteenth century and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Marathas and Pindarias and came under British protection in 1816 at which time it was paying tribute to Holkar. The present ruler of the State—which is administered by the Maharao Raja and a Council of 11 in an old fashioned but popular manner—is His Highness **Maharao Raja Sir Raghunath Singh Bahadur G.C.M.G. G.C.I.E.. He was born in 1860 and succeeded in 1889. Revenue about 12 lakhs. Expenditure nearly the same.**

Tonk State—Partly in Rajasthan and partly in Central India consists of six Parganas separated from one another. The ruling family belongs to the Salazari Clan of the Bunerwal Afghan tribe. The founder of the State was **Nawab Mahomed Amir Khan Bahadur**, General of Holkar's Army from 1798-1806. Holkar bestowed grants of land on him in Rajasthan and Central India and the land so granted him was ratified by the peace made between the British and the Chiefs of Rajasthan in 1817 and was consolidated in to the present State. His grand son was deposed. The present ruler of the State is His Highness **Amirud Doula Washul Mulk Nawab Sir Haid Muhammad Ibrahim Ali Khan Bahadur, G.C.S.I. G.C.I.E. ascended the mansab in 1906. The administration is conducted by the Nawab assisted by a Council of four members viz—(1) Captain W. T. Webb, I. A., Revenue Member and Vice-President, (2) Captain N. D. O. Toole, Judicial Member, (3) Khan Bahadur Sahibzada Muhammad Ishaque Khan, Home Member, and (4) Sahibzada A. B. Wahab Khan,**

Financial Member Revenue Rs 23,65,786
Expenditure Rs 23,31,180

Shahpura State.—The ruling family belongs to the Beroolia Clan of Rajputa. The State came into existence about 1629 when the Pargana of Phulia was granted by the Mughal Emperor Shah Jahan to Maharaj Surjan Singh, son of Maharaj Surajmal the second son of Maharana Amar Singh of Udaipur. Later on Raja Ran Singhji received the pargana of Kachhola from the Maharana of Udaipur and was recognised as a great noble of the Mewar State.

The present Ruler is Raja Dhiraja Sir Nahar Singhji K.C.S.I. The State enjoys permanent honour of 9 guns salute.

Bharatpur State.—Consists largely of an immense alluvial plain watered by the Ban-ganga and other rivers.

The present ruling family of Bharatpur are Jats, of the Singwar clan who trace their pedigree to the eleventh century. The family derives its name from its old village Singwal. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803. It helped Lord Lake with 6,000 horse in his conquest of Agra and battle of Laswari wherein the Maratha power was entirely broken and received a districts as reward for the service. In 1804 however Bharatpur sided with Jaswant Rao Holkar against the British Government which resulted in a war. Peace was re-established in 1806 under a treaty of alliance and it continues in force. The Gadi being usurped by Darjan Sal in 1825 the British Government took up the cause of the rightful heir Maharaja Balwant Singh Shaha. Bharatpur was besieged by Lord Combermere and as the faithful subjects of the State also made common cause with the British Army the usurper was quickly disposed of, and Maharaja Balwant Singh the rightful heir to the Throne came into his own. Bharatpur also rendered valuable service to the British Government during the Mutiny. During the great War the Bharatpur Durbar gave valuable help to the Imperial Government. The Bharatpur Imperial Service Infantry served in East Africa and the Mule Transport Corps served in all theatres of war except Africa. The following are among the most important contributions made by the State during the great war: (1) reinforcement sent to E. Africa for the Imperial Service Infantry, 714 rank and file and 84 followers (2) reinforcements for the Imperial Service Transport Corps, 439 rank and file and 64 followers (3) State subscriptions to war loans 20 lakhs (4) State subscriptions to Imperial Indian Relief Funds Soldiers' Comfort Fund aeroplane Fleet Fund Lord Kitchener's Memorial Fund St John's Ambulance Serbian Relief Fund, and Red Cross 2 lakhs (5) public subscriptions to various war funds Rs. 26,000 and (6) public subscriptions to war bonds Rs. 69,000. Immediately upon their return from Europe the Bharatpur Transport Corps sent to the North West Frontier, and remained on active service there during the Afghan War. The Corps returned to Bharatpur at the conclusion of peace in February 1920. The present Chief is Colonel His Highness Shri Maharaja Brijendra Bewal Sir Kishan Singh Bahadur,

Bahadur Jung K.C.S.I. who was born in 1899 and succeeded in the following year his father Maharaja Ram Singh who was deposed. Revenue 60 lakhs.

Dholpur State.—The family of the ruling Chiefs of Dholpur belongs to the Beroolia Jats, the adopted home of one of their ancestors. The family takes the name of Bamrolia about the year 1887. They next migrated to Gwalior, where they took the part of the Rajputs in their struggles against the Emperor's Officers. Eventually the Bamrolia Jats settled near Gohad and 1605 Surjan Deo assumed the title of Rana of Gohad. After the overthrow of the Maharattas at Panipat Rana Bhim Singh in 1781 possessed himself of the fortress of Gwalior but lost it six years later. In order to bar the encroachments of the Maharattas a treaty was made with the Rana in 1779 by the British Government under Warren Hastings, and the joint forces of the contracting parties re-took Gwalior. In the treaty of the 12th October 1781 between the British Government and Scindia it was stipulated that so long as the Maharaj Rana ob-served his treaty with the English, Scindia should not interfere with his territories. The possession of Gohad however led to disputes between the British and Scindia and in 1806 the Governor General transferred Gwalior and Gohad to Scindia and that of Dholpur, Bar, Baseri Rajpau and Rajakhara to Maharaj Rana Kirsat Singh. Maharaj Rana Kirsat Singh died in 1836 and was succeeded by his son Maharaj Rana Bhagwant Singh on whose death in 1870 his grandson the late Chh Maharaj Rana Nihal Singh succeeded to the Gadi. Major His Highness Hals and Daula Sipahdar M. Kish K. ramad Rajhal Hind Maharajachhira Sri Bewal Maharaj Rana Sri Udal Bhan Singh Lokindra Bahadur Dhir Jang Jai Deo K.C.S.I. K.C.V.O., the present ruler is the second son of Maharaj Rana Nihal Singh and was born on the 12th February 1893. On the death of his brother Maharaj Rana Ram Singh His Highness succeeded to the gadi on March 1911. He was educated at the Mayo College Ajmer where he passed the Diploma Examination and won several prizes. After a short course of training in the Imperial Cadet Corps at Dehra Dun His Highness went on a tour to Europe in 1912 and was invested with full ruling powers on the 9th October 1913.

By clan and family the Maharaj Rana is connected with the Jat Chiefs of Patiala, Jind Nabha and Bharatpur. His mother was the second sister of late Shahzada Badao Singh Bahadur of the family of Maharaj Ranjit Singh of Lahore. His Highness is married to the daughter of the Sardar of Badrukha in the Jind State.

Karauli State.—A State in Rajputana under the Political control of the Political Agent, Eastern Rajputana States Agency lying between 26° and 27° north latitude and 76° 30' and 77° 30' east longitude. Area, 1,242 square miles. The river Chambal forms the south-eastern boundary of the State, dividing it from Gwalior (Scindia's Territory) on the south-west. It is bounded by Jaipur and on the north-east by the States of Bharatpur, Jaipur and Dholpur. The State pays no tribute to Government. Languages spoken Hindi and Urdu.

Ruler—His Highness Maharajadhiraj Maharaja Sir Bhawan Pal, Deo Bahadur, Yashukul Chandra Bahal, C.I.E. Chief Member State Council, Rao Sahab Pandit Shanker Nath Sharma.

Kotah State belongs to the Hara section the clan of Chauhan Rajputs and the early history of their house is, up to the 17th century identical with that of the Bundi family from which they are an offshoot. Its existence as a separate State dates from 1625. It came under British protection in 1817. The present ruler is H. H. Lieut Colonel Maharao Sir Umed Singh Bahadur C.B.I., C.I.E., C.B.E. who was born in 1873 and invested with full powers in 1899. In administration he is assisted by two members, Rai Bahadur Pandit Bishwanath Nath M.A. and Major-General Onkar Singh, C.I.E. The most important event of his rule has been the restoration, on the deposition of the late Chief of the Jhalawar State of 16 out of the 17 districts which had been ceded in 1888 to form that principality. Revenue 53 lakhs. Expenditure 48 lakhs.

Jhalawar State consists of two separate tracts in the south-east of Rajputana. The ruling family belongs to the Jhala clan of Rajputs. The last ruler was deposed for misgovernment in 1896. part of the State was reassigned to Kotah and Kunwar Bhawan Singh son of Thakur Chhatar Singh of Fatehpur was selected by Government to be the Ruler of the new State. He was born in 1874 and was created a C.B.I. in 1908. He is assisted in administration by a Cabinet, has established many useful institutions and has done much to extend education in the State. Revenue 8 lakhs.

The Bikaner State in point of area is the 7th largest of all the Indian States and the second largest in Rajputana. The population of the State is 659,885 of whom 84 per cent are Hindus 11 per cent Mohammedans and 15 per cent Jains. The Capital City of Bikaner, with its population including the suburbs of 69,410, is the 3rd City in Rajputana.

The northern portion of the State consists of level loam land, whilst the remainder is for the most part sandy and undulating. The average rainfall is about 12 inches. The water level over most of the State is from 150 feet to 300 feet deep.

The reigning Family of Bikaner is of the Rathore clan of Rajputs and the State was founded in 1465 A.D. by Rao Bikaji, son of Rao Jodhaji Ruler of Marwar (Jodhpur), and after him both the Capital and the State are named *Raj Singhji* the first to receive the title of *Rajah* was "one of Akbar's most distinguished Generals and it was during his reign that the present Fort of Bikaner was built in 1593. The title of Maharajah was conferred on Rajah Anup Singhji by the Mughal Emperor in 1887 in recognition of his distinguished services in the capture of Golconda. The conspicuous services of Maharajah Sardar Singhji who in the Indian Mutiny of 1857 personally led his troops to co-operate with the British forces in the field on the outbreak of the Mutiny was acknowledged by the Government of India by the transfer of the Sub Tehsil of Tibi, consisting of 41 villages from the adjoining Sirsa Tehsil in the Punjab to the Bikaner State.

The present Ruler Major General His Highness Maharajadhiraj Raj Bahadur Narendra Shroffman Maharaja Sri Sir Ganga Singhji Bahadur, C.B.I., C.I.E., C.B.E., C.B.E., A.D.C., L.L.D. is the 21st of a long line of distinguished rulers renowned for their bravery and statesmanship. He was born on the 3rd October 1880, and assumed full ruling powers in December 1898. He was awarded the first class Kaisar-i-Hind Medal for the active part he took in relieving the famine of 1899-1900 and soon after he went on active service to China in connection with the China War of 1900-1901 in accordance of his famous Ganga Risala and was mentioned in despatches and received the China Medal and C.I.E. The State Forces consist of the Camel Corps known as Ganga Risala, whose sanctioned strength is 465 strong, an Infantry Regiment 448 strong a Regiment of Cavalry 842 strong including Body Guard, a Battery of Artillery (6 guns) and Camel Battery 60. At the outbreak of the Great War in 1914 His Highness immediately placed the services of himself and his State forces and all the resources of the State at the disposal of His Imperial Majesty the King Emperor and the Ganga Risala reinforced by the Infantry Regiment which became incorporated in the Camel Corps in the field rendered very valuable services in Egypt and Palestine. An extra force was also raised for internal security. His Highness personally went on active service in August 1914 and enjoys the honour of having fought both in France and Egypt and thus has the distinction of having fought for the British Crown on three continents *viz.* Asia, Europe and Africa. He was mentioned in despatches both in Egypt and France. His Highness also played a very conspicuous political part during the period of the War when he went twice to Europe as the Representative of the Princes of India once in 1917 to attend the meetings of the Imperial War Cabinet and Conference and again in 1918-19 to attend the Peace Conference where he was one of the signatories to the treaty of Versailles.

His Highness enjoys a salute of 19 guns (personally) whilst the permanent local salute of the State is also 19. His Highness has also had the honour of being elected the first Chancellor of the Chamber of Princes an office which he filled most creditably for 5 years till 1925.

His Highness is assisted in the administration of the State by the State Council consisting of 6 Ministers under a Prime Minister and Chief Councillor in the person of Sir Manubhai N. Mehta, Kt. C.B.I., M.A., LL.B. formerly the Dewan of the Baroda State. A Legislative Assembly was inaugurated in 1918 and consists of 46 Members 18 out of whom are elected Members and which meets twice a year.

The revenues of the State are over ninety lakhs of rupees and the State owns a large Railway system the total mileage being 619 15. Several projects for its extension are under contemplation including the new scheme of railway line connecting Delhi with Sindh and running through the Bikaner and Jaisalmer States. At present there is practically no irrigation in the State the crops depending wholly on the scanty rainfall, but the Sirsa Canal Project which is now under construction will irrigate

annually 620,000 acres in the north and help to protect the State against the serious famines from which it has suffered in the past. Even larger expectations are held out from the Bhakra Dam Project from which it is hoped that the remaining level lands in the north of the State will be irrigated. A coal mine is worked at Palana 14 miles south from the Capital.

Alwar State is a hilly tract of land in the East of Rajputana. Its Rulers belong to the Lalawat Naruka branch of the Kachhria Solar Dynasty. This ruling family is descended from Raja Udal Karanji who was the common ancestor of both Alwar and Jaipur. The State was founded by Pratab Singh who before his death in 1791 had secured possession of large territories. His successor sent a force to co-operate with Lord Lake in the war of 1803 and an alliance was concluded with him in that year. Disputes about successions mark the history of the State during the earlier part of the nineteenth century. The present chief H. H. Venerindra Chhromani Dev Col. Shri Sawai Maharaja Sir Jyoti Singhji Bahadur G.C.I.R. who was born in 1882 succeeded his father in 1892 and was invested with powers in 1903. He carries on the administration with the assistance of four Ministers. Members of His Highness' Council and various heads of departments. The normal revenue and ex-

penditure are about Rs. 40 lakhs a year. The State besides maintaining other forces, maintains also the Imperial Service Troops, which His Highness the late Maharaja was the first prince in Rajputana to offer (in 1848) in the defence of the Empire. Alwar stood first in recruiting in Rajputana at the time of the Great War and enjoys a salute of 17 guns. The capital is Alwar on the Rajputana-Malwa Railway 98 miles west of Delhi.

RAJPUTANA

SOUTHERN RAJPUTANA STATES

Political Agent—D. G. Mackenzie

CENTRAL INDIA AGENCY

Central India Agency is the name given to the country occupied by the Indian States grouped together under the supervision of the Political Officer who is designated the Agent to the Governor General in Central India with headquarters at Indore. As constituted in 1911—that is after the separation of the Gwalior Residency—it is an irregularly formed tract lying in two sections the Eastern comprising Bundelkhand and Baghelkhand Agencies between 22°-38' and 26°-19' North and 75°-10' and 83°-0' East and the Western consisting of the Bhopal and Southern States and Malwa Agencies between 21°-22' and 24°-47' North and 74°-0' and 78°-50' East. The British districts of Jhansi and Saugor and the Gwalior State divide the Agency into two sections. The total area covered is 61,531.3 square miles and the population (1911) amounts to 59,97,043. The great majority of the people are Hindus. There are 28 Salute States of which the following 10 have direct treaty engagements with the British Government—Indore, Bhopal, Rewa, Orchha, Datia, Dhar, Dewas Senior Branch, Dewas Junior Branch, Samthar and Jaora. All of these are Hindu except Bhopal, Jaora and Bani which are Mohammedan. Besides these there are 63 Minor States and Guaranteed Estates. Excluding the Indore State and the Hrapur and Lalgarh Estates, they are divided into following groups for administrative purposes—Bhopal Agency, 8 States and Estates (principal State Bhopal); Baghelkhand Agency, 12 States and Estates (principal State Rewa); Bundelkhand Agency, 22 States and Estates (principal State Orchha); Southern States and Malwa Agency, 43 States and Estates (principal States Dhar, Dewas Senior Branch, Dewas Junior Branch, Jaora and Retlam). The Agency may roughly be divided into two

natural divisions. Central India West comprising the former Plateau division with such hilly land as lies on this side and Central India East comprising the former low-lying area and the Eastern hilly tracts. The hilly tracts lie along the ranges of the Vindhya and Satpuras. They consist of forest areas and agriculture is little practised there, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled and their political relations with the Government of India and each other are very varied.

The following is the size, population and revenue of the ten treaty States mentioned above—

Name	Area in square miles	Population	Revenue, Lakhs Rs.
Indore	9,519	11,51,574	144
Bhopal	6,902	6,92,448	62
Rewa	13,000	14,01,672	55
Orchha	2,079	2,84,948	10
Datia	911	1,48,659	19
Dhar	1,777	2,80,335	16
Dewas Senior Branch	449	77,005	11
Dewas Junior Branch	419	66,998	6
Samthar	180	38,216	3
Jaora	601	85,778	11

Gwalior.—The house of Scindia traces its descent to a family of which one branch held the hereditary post of *patel* in a village near Satara. The head of the family received a patent of rank from Aurangzeb. The founder of the Gwalior House was Ranoji Scindia who held a military rank under the Peshwa Baji Rao. In 1738 the Peshwa granted deeds to Puar Holkar and Scindia empowering them to levy Chauth and Sardesamukhi and retain half the amount for payment to their troops. In 1736 Ranoji Scindia accompanied Baji Rao to Delhi where he and Mulhar Rao Holkar distinguished themselves in military exploits. Ranoji fixed his headquarters at the ancient city of Ujjain which for the time became the Capital of the Scindia dominions. During the time of Mahadji Scindia and Dowlat Rao Scindia Gwalior played an important part in shaping the history of India. Despite the partial reverses which Mahadji Scindia's troops suffered at the hands of the British in 1780 reverses which led to the treaty of Salbai (1782) Scindia's power remained unbroken. For the first time he was now recognized by the British as an independent sovereign and not as a vassal of the Peshwa.

In 1790 his power was firmly established in Delhi. While he was indulging ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February 1794. Himself a military genius, Mahadji Scindia's armies reached the zenith of their glory under the discipline of training of the celebrated French adventurer—De Boigne. Mahadji was succeeded by his grand nephew Daulat Rao in whose service Perron a Military Commander of great renown played a leading part. The strength of Scindia's Army was, however considerably weakened by the reverses sustained at Ahmednagar, Assaye, Asarghar and Laswari. Daulat Rao Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankoji Rao who passed away in the prime of life. On his demise in 1843 intrigues and party spirit were rampant and the Army was in a state of mutiny with the result that it came into collision with the British forces at Maharsipore and Panhar.

Jankoji Rao was succeeded by Jijaji Rao whose adherence to the British cause during the dark days of Mutiny when his own troops deserted him was unshakable. In 1861 he was created a Knight Grand Commander of the Most Exalted Order of the Star of India and in 1877 was made a Councillor of the Empire. Subsequently he received other titles and entered into treaties of mutual exchange of territories with the British Government. He died on the 20th June 1886 and was succeeded by his son Lieutenant General H. H. Maharaja Sir Madho Rao Scindia Alijah Bahadur G.O.C. G.S.I. G.S.R. A.D.C. to the King. He succeeded in 1886 and obtained powers in 1894. In 1901 he went to China during the war. He held the rank of honorary Lieutenant General of the British Army and the honorary degrees of LL.D. Cambridge and D.C.L. Oxon. He was also a Donor of the Order of St. John of Jerusalem in England. He died in June 1925 and was succeeded by his son H. H. Jeevraj Rao Scindia. In September 192, during

whose minority the administration of the State will be carried on by a Council of Regency.

The ruler of the State enjoys a salute of 21 guns. The State is in direct relations with the Government of India.

The northern part of the State is traversed by the G.I.P. Railway and two branches run from Bhopal to Ujjain and from Bina to Baran. The Gwalior Light Railway runs for 250 miles from Gwalior to Bhind from Gwalior to Sheopur and from Gwalior to Shivpuri. The main industries are cotton spinning which is done all over the State fine muslins made at Chanderi leather work etc. The State maintains three regiments of Imperial Service Cavalry two battalions of Imperial Service Infantry and a transport corps. Lashkar the capital city is two miles to the south of the ancient city and the fort of Gwalior. Annual income about 2 crores and expenditure about 175 lakhs.

Indore.—The founder of the House of the Holkar of Indore was Malhar Rao Holkar born in 1693. His soldierly qualities brought him to the front under the Peshwa who took him into his service and employed him for his conquests. When the Maratha power was weakened at the battle of Panipat in 1761 Malhar Rao had acquired territories stretching from the Deccan to the Ganges as a reward for his career as a Military Commander. He was succeeded by his grandson. On his death without issue his mother Ahilya Bai became the Ruler and her administration is still looked upon with admiration and reverence as that of a model ruler. She was succeeded by Tukoji Holkar who indeed had been associated with her to carry the Military administration and had in the course of it distinguished himself in various battles. Tukoji was succeeded by Keshi Rao who was supplanted by Jeevraj Rao his step brother a person of remarkable daring and strategy as exhibited in a number of engagements in which he had taken part. The brilliant success he obtained at the battle of Poona against the combined armies of Peshwa and Scindia made him a dictator of Poona for some time and he declared in consequence the independence of Holkar State. During 1804 he had a protracted war with the British, closed by a Treaty which recognised the independence of Holkar State with practically no diminution of its territories and rights. Jeevraj Rao showed signs of insanity from 1808 onwards and succumbed to that malady in 1811 when he was succeeded by his minor son Malhar Rao II. During the Regency which followed the power of the State was weakened by various causes the most important of which was the refractory conduct of the Military Commanders. On the outbreak of the war between the English and the Peshwa in 1817 some of these commanders, with a part of the army rebelled against the authority of the State and were disposed to befriend the Peshwa while the Regent, mother and her Ministers were for friendship with the British. There was a battle between the British Army and this refractory portion of the Holkar Army which culminated in the latter's defeat. Holkar had to come to terms and to cede extensive territories and rights over the Rajput Princes to the British but the internal sovereignty remained unaffected. The Treaty of 1813 which embodied

these provisions still regulate the relations between the British Government and the State.

Mahar Rao was well served by his able Minister **Tatva Jog**. He died a premature death in 1833. Then followed the weak administration of **Haril Rao** and his son. In 1844 **Tukoji Rao II** ascended the throne, but as he was a minor the administration was carried on by a Regency which was fortunate in having Sir Robert Hamilton, the Resident as its Adviser. The prosperity of the State revived a great deal during this administration and the progress was maintained after the Maharaja assumed powers in 1852. It was interrupted by the outbreak of Mutiny in 1857 in British India. This wave of disaffection did not leave some of the State troops untouched. The Maharaja with his adherents and the remaining troops remained however staunch to the British and gave every possible assistance to the British authorities at Indore. Mhow and other places which was recognised by the British Government. The Maharaja died in 1886 after having effected various reforms in the administration and raised the position of the State to a high degree of prosperity and honour. He was succeeded by **Shivaji Rao** who reigned for 18 years and will be specially remembered for his beneficent measures in matters of education, sanitation, medical relief and abolition of transit duties. **Tukoji Rao III** of the Maharaja succeeded in 1903 while yet a minor. The Regency Administration continued till 1911 and it deserves credit for a number of reforms effected in all the branches of administration. The policy of the Regency was maintained by the Maharaja and since his assumption of powers the State has advanced in education in general including female education, commerce and industrial developments, municipal franchise and other representative institutions. This prosperity is specially reflected in the Indore city the population of which has risen by forty per cent. The city has a first grade college, 3 High Schools and 1 Sanskrit College with a number of other Medical and Education Institutions. An Institute of Plant Industry for the improvement of cotton is located at Indore. It has also 9 Spinning and Weaving Mills.

During the War of 1914 the State placed all its resources at the disposal of the British Government. Its troops took part in the various theatres of war and the contribution of the State towards the War and Charitable Funds in money was 41 lakhs and its subscriptions to the War Loans amounted to Rs. 52 lakhs while the contributions from the Indore people amounted to over one crore. This assistance received the recognition of the British Government. In the administration His Highness is assisted by his Prime Minister and a Council. The State Army consists of about 4,000 officers and men. The State is traversed by the Holkar State Railway, the principal Station of which is Indore. B. M. Railway and B. & C. I. Railway and the U. B. Section of the G. I. P. Railway. Besides the trunk roads there are 600 miles of roads constructed and maintained by the State. The reforms introduced were the establishment of State Savings Banks, Scheme of Life Insurance for State Officials, establishment of a Legislative Committee consisting of seven elected Members out of a total of nine

Members introduction of the Scheme of Compulsory Primary Education in the City of Indore and measures for expansion of education in the mofussil.

His Highness **Maharaja Tukoji Rao III** abdicated in favour of his son. The present **Maharaja Yashwant Rao Holkar** (a minor) was born on 6th September 1908. He received his education in England from 1920-23 and has again proceeded to Oxford for higher education. He married a daughter of the Junior Chief of Nagal (Kohapur) in February 1924. The Maharaja being minor the administration is conducted by the Cabinet and the Prime Minister in accordance with the existing rules and practice under the supervision of and with the advice of the Honble the Agent to the Governor General in Central India.

The chief imports are—Cloth, Machinery, Coal, Sugar, Salt, Metal and Kerosene Oil of the value of Rs. 10,24,000.

The chief exports are—Cotton, Cloth, Tobacco and Cereals of the value of Rs. 4,12,00,000.

Cloth manufactured at the local mills is valued at nearly two crores and the local trade in wheat is estimated at one crore.

Cotton excise duty at 3½ per cent *ad valorem* has been abolished from 1st May 1928 and an industrial tax is levied on the cotton mills from the same date at the rate of 1½ annas per rupee on all incomes upto Rs. 50,000 and 2½ annas per rupee on all incomes above Rs. 50,000.

The area of the State is 9,526 square miles with a revenue of about one crore and thirty eight lakhs.

Bhopal—The principal Mussalman State in Central India ranks next in importance to Hyderabad among the Muhammadan States of India. The ruling family was founded by **Dost Mohammed Khan** a Tirah Afghan. He was granted a *Sawad* of Balraia and Nazirabad *Parganas* in recognition of his meritorious services to the Emperor of Delhi. With the disintegration of the Mogul Empire Bhopal State developed into an independent State. In the early part of the 19th century the Nawab successfully withstood the inroads of Scindia and Bhopala and by the agreement of 1817 Bhopal undertook to assist the British with a contingent force and to co-operate against the Pindaris.

The present ruler of the State His Highness **Sikander Saadat Nawab** **Iftikharul Mulk Mohammed Hamidullah Khan Bahadur B.A. CSI** succeeded his mother Her Highness **Nawab Sultan Jahan Begum** on her abdication in May 1928. Having ably conducted the administration of the State for nearly ten years as Chief Secretary and afterwards as Member for Finance and Law and Justice Departments His Highness is personally conversant with each and every detail of the administration.

The names of Members of His Highness State Council are given below in order of precedence.

Alimnabat, Sir **Oswald Vivian Boanquet K.C.B., O.L.B.** President of the State Council and Member Revenue Department.

1. **Ali-Martabat** **Mosoon ul Mulk**, Khan Bahadur **Mouli Mohammed Maimuzzaman Khan B.A. F.S.S.** Member **Robkar** **Khas**.

2. Ali-Maratbat Bahirul Mulk Khan Bahadur Sir Israr Hassan Khan Kt. C.I.E. Member Home and Education Departments

3. Ali Maratbat Rai Bahadur Raja Oudh Narain Bheeray B.A., Member for Finance Law and Justice and Public Works Depts

4. Ali Maratbat Brigadier General Baulat Jang Abdul Qayum Khan Bahadur O.B.E. O.B.I. Member in charge of the Army Department

5. Member Political Department—Vacant

For the present the Political Department is under His Highness direct control

The Secretary in charge of the Department is Ali Qadar Kazi Ali Haidar Abbasi

Along with other troops the State maintains one full strength Pioneer Battalion for Imperial Service. The Capital Bhopal City situated on the Northern bank of an extensive lake is the junction for the Bhopal Ujjain Section of the Great Indian Peninsula Railway

Bewa—This state lies in the Baghelkhand Agency and falls into two natural divisions separated by the escarp of the Kaimur range. The area is 18,600 sq. miles with a population of 14 lakhs. Its Chiefs are Baghel Rajputs descended from the Solanki clan which ruled over Gujarat from the tenth to the thirteenth century. In 1812, a body of Pindaries raided Mirzapur from Rewa territory and the Prince who had previously rejected overtures for an alliance, was called upon to accede to a treaty acknowledging the protection of the British Government. During the Mutiny Rewa offered troops to the British, and for his services then, various parganas, which had been seized by the Marathas were restored to the Rewa Chief. The present chief is H. H. Maharaja Sir Gulab Singh Bahadur, K.C.S.I., who was born in 1903. He was married in 1919 to the sister of His Highness the Maharaja of Jodhpur. Upon the death of his father Col. H. H. Maharaja Sir Venkat Raman Singh Bahadur on 30th October, 1918, H. H. Maharaja Gulab Singh Bahadur succeeded to the gaddi on 31st October as a minor. During the period of minority the State was administered by a Council of Regency with H. H. Maharaja Sir Rajjan Singh Bahadur, Colonel, K.C.S.I., K.C.V.O. A.D.C. of Rutlam as Regent. H. H. Maharaja Gulab Singh Bahadur attained majority in 1922 and was invested with full ruling power on 31st October 1922 by H. E. the Viceroy and the administration of the State is now carried on by him with the aid of four Commissioners. His Highness has got a son and heir named Maharaj Kumar Martand Singhji, born on 15th March 1928.

His Highness second marriage with the daughter of H. H. Maharaja Kishengarh was performed on the 18th February 1926.

Dhar—This State under the Agency for Southern States in Central India takes its name from the old city of Dhar long famous as the capital of the Paramara Rajputs, who ruled over Malwa from ninth to the thirteenth century and from whom the present chiefs of Dhar—Puar Marathas—claim descent. In the middle of the 18th century the Chief of Dhar Anand Rao, was one of the leading chiefs of Central India, sharing with

Holkar and Scindia the rule of Malwa. The State came into treaty relations with the British Government in virtue of the treaty of 1819. Lt.-Colonel H. H. the Maharaja Sir Udaji Rao Puar Sahib Bahadur K.C.S.I. K.C.V.O. K.B.E., died on 30th July 1926 and the Government of the State is carried on by a Council with H. H. the Maharani Sahiba as President. There are 11 Feudatories and 9 Bhoomies of whom 13 hold a guarantee from the British Government. The average expenditure is about 18 lakhs. Rao Bahadur K. Naddkar is Dewan of the State and Vice President of the Council. The present Ruler His Highness Maharaja Anand Rao Puar Sahib Bahadur is a minor.

Jasra State—This State is in the Malwa Agency covering an area of about 601 square miles with a total population of 85,817 and has its headquarters at Jasra town. The Chiefs of Jasra claim descent from Abdul Majid Khan an Afghan of the Tajik Khel from Swat who came to India to acquire wealth. The first Nawab was Ghatfir Khan who obtained the State about the year 1808. The present chief is Lt.-Colonel H. H. Fakhrud Daulah Nawab Sir Mohammad Iftikhar Ali Khan Sahib Bahadur Sanat Jang K.C.I.E., who was born in 1882 and is an Honorary Lt. Colonel in the Indian Army. The administration is at present controlled by a Council of State of which His Highness the Nawab is the President. Khan Bahadur Sahibzada Mohammad Sarfaraz Ali Khan is the Chief Secretary and Vice-President of the State Council. The Council is constituted of a President a Vice President and five other members whose names are (1) Panabai Amar Nath Katju B.A. LL.B. (Revenue Secretary), (2) Manohar Ram Daryal (Financial Secretary), (3) Mr. Brajraj Behman Khan Bar-at-Law, (Judicial Secretary), (4) Khan Bahadur Sahibzada Mohammad Sher Ali Khan (Military Secretary), and (5) Sahibzada Mohammad Saifur Ali Khan (Private Secretary). The soil of the State is among the richest in Malwa being mainly of the best black cotton variety bearing excellent crops of wheat, cotton and poppy. The average annual revenue is Rs 11,67,000.

Rutlam—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles, including that of the Jagir of Khara in the Kumbhalgarh Chiefship, which pays an annual tribute to the Rutlam Darbar. The State was founded by Raja Ratan Singh, a great grandson of Raja Udai Singh of Jodhpur in 1552. The Ruler of Rutlam is the religious head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The State enjoys full and final civil and criminal powers. The present Ruler of Rutlam is Colonel His Highness Maharaja Sir Sajjan Singh, K.C.S.I. K.C.V.O. A.D.C. to H. E. the Prince of Wales who was born in 1880, educated at Daly College Indore, received military training in Imperial Cadet Corps and invested with full powers in 1898. His Highness served in the war in France and Egypt from 1915 to 1918 was mentioned in despatches and received the Croix d'Officiers de Legion d'Honneur. Salute 15 guns local 15 guns.

Dewar—Rai Bahadur B. N. Zutshi, O.B.E., B.A. LL.B.

Datta State.—The rulers of this State in the Bundelkhand Agency are Bundela Rajputs of the Orghha house. The territory was granted by the chief of Orghha to his son Bhagwan Rao in 1623. This was extended by conquest and by grants from the Delhi emperors. The present ruler Major His Highness Maharaja Lokendra Singh Govind Singh Ja Dev Bahadur K.C.S.I. 1918 who was born in 1887 and succeeded in 1901, married 1902 enjoys a salute of 15 guns. He placed all his resources and his personal services at the disposal of the Imperial Government during the Great War and established a War Hospital at Datta. He is a progressive ruler and has created a Legislative Council and introduced many useful and important reforms in his State. He is a Vice-President of St. John Ambulance Association a patron of Red Cross Society and has recently offered to the Imperial City of Delhi the life size marble statue of Lord Reading the late Viceroy. His Highness is a famous big game shot. The late Apparent Raja Bahadur Balabatra Singh born 1907 has married a daughter of the Maharaja Bahadur of Balmampur and is a very promising prince.

Orghha State.—The rulers of this State are Bundela Rajputs claiming to be descendants of the Gaharwars of Benares. It was founded as an independent State in 1048 A.D. It entered into relations with the British by treaty made in 1814. The present ruler is His Highness Sir Pratap Singh K.C.S.I. who was born in 1854. He has the hereditary titles of His Highness Saranadiprahalad Bundelkhand Maharaja Mahendra Bahadur Bahadur. The present chief enjoys a salute of 17 guns. The State has a population of about 350,000 and an area of 2,080 square miles. The capital is Likhmagarh 36 miles from Lalitpur Station on the G.T.P. Railway. Orghha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings of which the finest were erected by Maharaja Bir Singh Deo the most famous ruler of the State (1903-1927).

Sikkim

Sikkim is bounded on the north and north east by Tibet on the south east by Bhutan on the south by the British district of Darjeeling and on the west by Nepal. The population consists of Bhutias, Lepchas and Nepaleses. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas which runs east and west forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges which run southwards from the main chain separate Sikkim from Nepal on the west, and from Tibet and Bhutan on the east. On the Singalila range rise the great snow peaks of Kanchenjunga (28,146 feet), one of the highest mountains in the world. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Doagky La.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814 the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1836 the Raja granted the site of Darjeeling to the British and received Rs. 12,000 annually in lieu of it. The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1904. The State is thinly populated, the area being 2,318 square miles and the population 81,721, chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa where a new convention was signed. Trade with the British has increased in recent years and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler His Highness Maharajah Sir Tashi Namgyal K.C.I.E. was born in 1908 and succeeded in 1918. His Highness was invested with full ruling powers on the 5th April 1918. The title of a C.I.B. was conferred upon the Maharaja on the 1st January 1918 and K.C.I.E. on 1st January 1923. The average revenue is Rs. 4,02,422. Political Officer in Sikkim—Lt Col. F. M. Bailey C.I.E.

Bhutan

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas adjacent to the northern border of Eastern Bengal and Assam. Its area is 28,000 square miles and its population, consisting of Buddhists and Hindus has been estimated at 300,000. The country formerly belonged to a tribe called Tokpa, but was wrested from them by some Tibetan soldiers about the middle of the seveneenth century. British relations with Bhutan commenced in 1772 when the Bhutias invaded the principality of Cooh Behar and British aid was invoked by that State. After a number of raids by the Bhutaneses into Assam an envoy (the Hon. A. Eden) was sent to Bhutan who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disavowed and the Duars annexed. This was followed by the treaty of 1863 by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910 by which the Bhutanes Government bound itself to be guided by the advice of the British Government in regard to its external relations while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904 the Bhutias gave strong proof of their

friendly attitude. Not only did they consent to the survey of a road through their country to Okunibi but their ruler the Tongpa Penlop accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.E. and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H.H. the Maharaja of Bhutan, Sir Ugyen Wangchuk K.C.I.E. K.O.F.E. At the head of the Bhutan Government there are nominally two supreme authorities the Dharma Raja, known as Shapting Rinpoché the spiritual head, and the Deb or Dopa Raja, the temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse and his reincarnation then takes place always in the Choje or royal family of Bhutan.

Cultivation is backward and the chief crop is maize. The military force consists of local levies under the control of the different chiefs. They are of no military value.

Nepal

The kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Hinduayas. It has an area of about 58,000 square miles with a population of about 5,580,000 chiefly Hindus. The greater part of the country is mountainous the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow-clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu and Bhaktgan and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family Maharaja Jung Bahadur Rana obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by the descendants of the Rana family. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. By virtue of the same treaty Nepal maintains a Representative at Delhi and her treaty relations with Tibet allow her to send a Resident at Lhasa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained and during the rule of the present Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr. Asquith in his Guildhall speech in 1915. The message from His Majesty the King Emperor to the Nepalese Prime Minister

sent on the termination of hostilities and published at the time as also the Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war. To further strengthen and cement the bonds of friendship that have subsisted so long between the two countries the present Prime Minister Marshal and Supreme Commander-in-Chief signed a new Treaty of friendship concluded between the Governments of Nepal and Great Britain on the 21st December 1923.

From the foregoing account of the history of Nepal it will be seen that the Government of the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The sovereign or Maharajadhiraja, as he is called is but a dignified figure-head whose position can be likened to that of the Emperor of Japan during the Shogunate. The present King, His Majesty Maharajadhiraja Tribhuvana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung Deva ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who while enjoying complete monopoly of power couples with his official rank the exalted title of Maharaja. Next to him comes the Commander in Chief who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Chandra Shum Shere Jung Bahadur Rana K.C.B., G.C.S.I., G.O.M.G., C.V.O., D.C.L., Hon. Genl. British Army, Hon. Col. Fourth Gurkhas, Thong Lin Pimma Kokang Wang Syan (Highest rank in the Chinese organisation) Grand Officer de la Legion d'Honneur Prime Minister, Marshal and the Supreme Commander in Chief Nepal June 1901.

Rice, wheat and maize form the chief crops in the lowlands. Mineral wealth is supposed to be great but like other sources of revenue, has not been developed. Communications in the State are primitive but since 1920 the Government has already undertaken the construction of a good and permanent road for vehicular traffic from Baxaul to Bhipphedi—the base of a steep ridge. In the main route to the capital of the country from British India—and also has installed a ropeway to connect this base with the capital proper covering a distance of 14 miles. A light railway from Amlekhung covering a distance of 25 miles in the route and connecting with the B & N.W. Ry. at Baxaul also has been constructed and opened for traffic since March 1927. It has also put up a telephone over this route connecting the capital with the frontier township of Birgunje near Baxaul. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000 the highest posts in it being filled by relations of the minister. The State is of considerable archaeological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains of inscribed pillars.

British Ensign—W. H. J. Wilkinson, C.L.E. G.F.A.

NORTH-WEST FRONTIER STATES

The Indian States of the North West Frontier Provinces are Amb Chitral, Dir and Phulera. The total area is about 7 704 square miles and the population mainly Mahomedan is 1 822 094. The average annual revenue of the first three is about Rs. 4 65 000, that of Phulera is unknown.

Amb—Is only a village on the western bank of the Indus in Independent Tannahia.

Chitral—Runs from Dir to the south of the Hindu Kush range in the north and has an area of about 4 500 square miles. The ruling dynasty has maintained itself for more than three hundred years during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission and in 1889 on the establishment of a political agency in Gilgit the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler Aman ul Mulk accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession. The eldest son Nizam ul Mulk was recognised by Government, but he was mur-

dered in 1895. A war was declared by Umra Khan of Landul and Dir against the Indians and the Agent at Gilgit who had been sent to Chitral to report on the situation, was besieged with his escort and a force had to be despatched (April 1895) to their relief.

The three valleys of which the State consists are extremely fertile and continuously cultivated. The internal administration of the country is conducted by His Highness Sir Shajaul Mulk K.O.B. the Mehtar of Chitral and the foreign policy is regulated by the Political Agent at Malakand.

Dir—The territories of this State about 4 000 square miles in area include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajor Bud. The Nawab of Dir is the overlord of the country exacting allegiance from the petty chiefs of the clans. Dir is mainly held by Yusufzal Pathans the old non Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Bashkar.

Political Agent for Dir, Swat and Chitral
C. Latimer C.I.E. I.C.

STATES IN THE MADRAS PRESIDENCY

The Madras Presidency includes 5 Indian States covering an area of 10 648 square miles. Of these the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance of the chieftain called the Tondiman. Banganapalle and Sandur two petty States of which the first is ruled by a Nawab lie in the centre of two British districts

Name	Area sq miles	Popula- tion	Estimated Gross Revenue in lakhs of rupees
Travancore	7 625	4 006 062	210.67
Cochin	1 417½	979 019	76.9
Pudukottai	1 179	426 813	42.81
Banganapalle	25½	36 692	3.8
Sandur	167	11 684	1.42

These States were brought into direct relation with the Government of India on October 1st 1923.

Travancore—This State which has an area of 7 648½ square miles and a population of 4 006 062 with a revenue of Rs. 2 21 88,126 occupies the south west portion of the Indian Peninsula, forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty one of the three great Hindu dynasties which exercised sovereignty at one time in Southern India. The petty chiefs who had subsequently set up as independent rulers within the State were all

subdued and the whole country included within its present boundaries was consolidated and brought under one rule by the Maharaja Marthanda Varma (1729-58). The English first settled at Anjengo a few miles to the north of Trivandrum and built a factory there in 1684. In the wars in which the East India Company were engaged in Madras and Tinnevely in the middle of the 18th century the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunchest allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. To protect the State from possible incursions by Tippu, an arrangement was come to in 1788 with the East India Company and in 1795 a formal treaty was concluded, by which the Company agreed to protect Travancore from all foreign enemies. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

H. H. the Maharaja (b. November 1912) acceded the masnad in September 1924. During the minority the State is ruled by Her Highness Maharani Betu Lakshmi Bai, aunt of the Maharaja as Regent on his behalf. The work of legislation is entrusted to a Council brought into existence in 1888 and as last reconstituted in 1921 has a majority of non-official elected members. The Council is invested with the powers of voting on the budget, moving resolutions and asking questions including supplementary questions. Women are placed on a footing of complete equality with men in the matter of both franchise and membership. This is the largest measure of constitutional reform introduced in any Indian State. A representative assembly known as the Sri Maham Popular Assembly meets

once a year. Its members who are the elected representatives of the people are given an opportunity to express direct to the Dewan their wants and wishes and their views regarding the administrative measures adopted from time to time. Local Self Government on a small scale exists in the more important towns. The State supports a military force of 1,474 men. Education has advanced considerably in recent years and the State takes a leading place in that respect. In the matter of female Education the State has a leading place among Indian States and the British Indian Provinces. The principal food-grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, areca nut, jack fruit, sugar-cane and tapioca. Rubber and tea are among other important products. Cotton weaving and the making of matting from the coir are among the chief industries. The State is well provided with roads and with a natural system of back waters, besides canals and rivers navigable for country crafts. One line of railway about one hundred miles in length cuts across the State from east to west and then runs along the Coast to the Capital. More railway lines are in contemplation. The capital is Trivandrum.

Agent to the Governor General—C W R Cotton C.I.E. 108

Dewan—Maurice E Watts B.A. Bar-at-Law

Cochin—This State on the south west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore. Very little is known of its early history. According to tradition the Rajas of Cochin hold the territory in right of descent from Cherman Perumal, who governed the whole country of Kerala, including Travancore and Malabar as Viceroy of the Chola Kings about the beginning of the ninth century and afterwards established himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Calicut, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776 the State was conquered by Hyder Ali to whom it remained tributary and subordinate and subsequently to his son, Tippu Sultan. A treaty was concluded in 1781 between the Raja and the East India Company by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu, and to pay a subsidy.

His Highness Raja Sri Sir Rama Varmah, G.O.B. G.O.L.E. who was born in 1852 and who ascended the Masnad in 1895, having abdicated in December, 1914. His Highness Sri Sri Rama Varmah G.O.L.E. who was born on 6th

October 1838 succeeded to the throne and was duly installed as Raja on the 21st January 1915. The administration is conducted under the control of the Maharaja whose chief Minister and Executive Officer is the Dewan, Rao Bahadur T. S. Narayana Iyer M.A. B.L. The forests of Cochin form one of its most valuable assets. They abound in teak ebony, blackwood and other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts, and their products form the chief exports of the State. Communications by road and back waters are good and the State owns a line of railway from Shoranore to Ernakulam the capital of the State and a Forest Steam Tramway used in developing the forests. The State supports a force of 25 officers and 250 men.

Agent to the Governor General—C W R Cotton C.I.E. 108

Pudukkottai—This State is bounded on the north and west by Trichinopoly on the south by Ramanad and on the east by Tanjore. In early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madura. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1762 the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1766 he sent some of his troops to assist Muhammad Yusuf the Company's sepoy commander, in settling the Madura and Tinnevely countries. Subsequently he was of much service in the wars with Haidar Ali. His services were rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that there is no treaty or arrangement with the Raja. The present ruler is His Highness Sri Brihadamba Das Sri Marthanda Bhairava Tondiman Bahadur G.O.B. who is eighth in descent from the founder of the family. He succeeded in 1888. The administration of the State under the Raja is entrusted to a Regent. The various departments are constituted on the British India model. The principal food crop is rice. The forests, which cover about one-seventh of the State contain only small timber. There are no large industries. The State is well provided with roads but Pudukkottai is the only municipal town in the State.

Agent to the Governor General—C W R Cotton Esq. C.I.E. 108

Assistant Agent to the Governor General—Rao Sahib H. K. Govindan

Bengalopalle—This is a small State in two detached portions which in the eighteenth century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it was ceded to the Madras Government by the Nizam in 1800. The present ruler is Nawab Meer Fazeel Khan Bahadur. The chief food-grain is cholam. The Nawab pays no tribute and maintains no military force. The revenue of the State is over 3 lakhs. The Nawab enjoys a salute of 9 guns.

Agent to the Governor General—W F Cotton Esq., C.I.E. 108

Assistant Agent to the Governor General—Rao Sahib E. K. Govindan

Sandur—The State is almost surrounded by the District of Bellary the Collector of which is the Assistant to the Governor General's Agent. After the destruction of the Empire of Vijayanagar in 1565 the State came to be held by semi-independent chiefs under the nominal sovereignty of the Sultan of Bijapur and in 1728 one of these chiefs a Poligar of Bedar tribe was turned out by an ancestor of the present Raja named Siddoji Rao of the Phosle family of the famous Maharatta Chief Sivaji they were Senapathiks of Sivaji. In 1814 Rao's time the State came under the Madras Government and his heirs in perpetuity with full powers Civil and Criminal. In 1818 the title of Raja was conferred on the Chief as a hereditary distinction. The present Ruler is Raja Brimanth Venkata Rao Rao Sahab. He was born in 1862. He married Rani Brimanth Tara Raja's sister of the late Raja of Akalkot.

in the Bombay Presidency. The State is administered by the Raja and the Dewan (Meherbhai T. Ramachandra Ayyar). The Raja pays no tribute and maintains no military force. The most important staple crop is cholam. Teak and sandalwood are found in small quantities in the forests.

The minerals of the State possess unusual interest. The hematites found in it are probably the richest ore in India. An outcrop near the southern boundary forms the crest of a ridge 160 feet in height which apparently consists entirely of pure steel grey crystalline hematite (specular iron) of intense hardness. Some of the softer ore used to be smelted but the industry has been killed by the cheaper English iron. Manganese deposits have also been found in three places and during 1911 to 1914 over 223,000 tons of manganese ore were transported by one company.

Assistant Agent to the Governor General—Khan Bahadur Muhammad Buzulah Sahab Bahadur C.I.E. 0 B E

STATES OF WESTERN INDIA

Owing to the large number of States concerned and the interlacing of their territories with neighbouring British districts, the transfer of States under the Bombay Government to direct political relations with the Government of India (which was advocated in the Montagu Chelmsford Report on the Constitutional Reform) had been delayed. The first stage of that process, however, was carried out in October 1924 when a new Residency was created in direct relation with the Government of India comprising the whole of the compact area making up the Kathiawar, Cutch and Palanpur Agencies under the Government of Bombay.

Resident of the First Class and Agent to the Governor General in the States of Western India—C C Watson C.I.E. 108

Judicial Commissioner in the States of Western India—W T W Baker 108

Kathiawar Agency—Kathiawar is the peninsula or western portion of the Province of Gujarat, Bombay. Its extreme length is about 220 miles and its greatest breadth about 165 miles, the area being 23,645 square miles. Of this total about 20,882 square miles with a population of 2,542,535 is the territory forming the Agency formerly subordinate to the Government of Bombay established in 1822 having under its control nearly 200 separate States whose chiefs divided amongst themselves the greater portion of the peninsula. The Kathiawar Agency was divided for administrative purposes into two divisions—Western and Eastern Kathiawar States (four prants—Jhalawar, Halar, Sorath and Gohilwar) and the States have since 1868 been arranged in seven classes.

Bhavnagar—This State lies at the head and west side of the Gulf of Cambay. The Gohel Bajputs, to which tribe the Ruler of Bhavnagar belongs, are said to have settled in the country about the year 1280 under Rajakji from whose

three sons—Ranoji, Saranji and Shahji—are descended respectively the chiefs of Bhavnagar, Lathi and Palitana. An intimate connexion was formed between the Bombay Government and Bhavnagar in the eighteenth century when the chief of that State took pains to destroy the pirates which infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Marwar but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1807. The State pays an annual tribute of Rs 1,28,060 to the British Government. Rs 3,561,800 as Peshkashi to Baroda, and Rs 22,848 as Zortabi to Junagadh. During the minority of His Highness the Minor Maharaja Krishna Kumarsinhji who succeeded to the gadi on the death of his father Maharaja Sir Bhavsinhji K. S. I. on 17th July 1919 the administration of the State has been entrusted to a Council of Administration. The Council consists of Sir Prabhushankar D. Patani, K. C. I. E. as President and Lieut. Colonel A. H. E. House as Vice President. The other members of the Council are Dewan Bahadur T. K. Trivedi and Mr S. A. Goglawala, M. A. L. R. Bar-at-law. One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined and each within his own sphere is independent of the others being directly responsible to the Council.

The chief products of the State are grain, cotton, sugar-cane and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 288 miles in length. The capital of the State is the town and port of Bhavnagar which has a good and safe harbour for shipping and carried on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 204 State Landers and 250 State Infantry.

Population (in 1921) was 426,404 of whom 88 per cent. were Hindus and 8 per cent. Mahomedans. The average income for the last five years was Rs. 91,24,677 and the average expenditure Rs. 83,11,480.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,167 square miles exclusive of the Dhrangadhra portion of the Rann of Kutch. The ruler of Dhrangadhra is the head of the Jhalia family of Rajputa, originally called the Makvana. This Rajput clan is of great antiquity having migrated to Kathiawar from the North establishing itself first at Patli in the Ahmedabad District, thence moving to Halvad and finally settling in its present seat. Being the guardians of the North-Eastern marches of Kathiawar they had to suffer repeatedly from the successive invasions of the Mahomedans into that Peninsula, but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad its surrounding territories and the salt pans attached thereto by an Imperial Firman issued by Emperor Aurangzeb. The States of Vankaner Limbdi Wadhwan, Chuda, Sayla and Than-Jakhtar are offshoots from Dhrangadhra. His Highness Maharaja Shri Sir Ghanashyamsinhji G.C.I.E., K.C.S.I. Maharaja Raj Sahib is the ruler of the State and the titular head of all the Jhalas. The administration is conducted under the Maharaja's directions by the Dewan Rana Shri Mansinhji S. Jhalia, C.I.E. The soil being eminently fit for cotton cultivation, the principal crops are long stapled cotton and cereals of various kinds. Excellent building and ornamental stone is quarried from the hills situated within the State. Wadagra salt of an excellent quality with Magnesium chloride and other bye-products of salt are also manufactured at the State Salt works at Kuda which offer practically in exhaustible supplies for their manufacture. The capital town is Dhrangadhra a fortified town, 75 miles west of Ahmedabad.

Dhrangadhra State owns the Railway from Wadhwan Junction to Halvad a distance of 40 miles which is worked by the B. B. & C. I. Railway. An extension of this line to Malviya is under contemplation. A railway siding has been laid from Dhrangadhra to Kuda—a distance of 11 miles—to facilitate the salt traffic.

Gondal State—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Maharaja Sahib, the present Ruler being H. H. Shri Bhagvat Singhji G.C.I.E. The early founder of the State Kumbhoji I had a modest estate of 20 villages. Kumbhoji II, the most powerful Chief of the House widened the territories to almost their present limits by conquest but it was left to the present ruler to develop its resources to the utmost and in the words of Lord Reay Governor of Bombay, by its "importance and advanced administration to get it recognised as a First Class State. The State pays a tribute of Rs. 1,10,721. The chief products are cotton and grain and the chief manufactures are cotton and woolen fabrics and gold embroidery. Gondal has always been pre-eminent amongst the States of its class for the vigour with which public works have been

prosecuted and was one of the earliest pioneers of railway enterprise in Kathiawar having initiated the Dhasa-Dhoraji line, it owns the Dhasa Jam Jodhpur section called the Gondal Railway and manages it along with the Jetalpur Rajkot Railway and H. H. Gackwad & Khajadiya-Dhari line. It subsequently built the Jetalpur Rajkot Railway in partnership with other Native States in Kathiawar. There are no export and import dues, the people being free from taxes and dues. Comparatively speaking Gondal stands first in Kathiawar in respect of the spread of education. Compulsory female education in the State has been recently ordered by His Highness. Rs. 13 lakhs have been spent on irrigation tanks and canals and water supply to the town of Gondal. The Capital is Gondal a fortified town on the line between Rajkot and Jetalpur.

Junagadh State—This is a first class State under the Kathiawar Political Agency and lies in the south western portion of the Kathiawar Peninsula between 24° 44' and 21° 53' North latitude and 70° and 72° East longitude with the Halar Division of the province as its northern boundary and Gohiwar Prant to its East. It is bounded on the south and west by the Arabian Sea. The State is divided into 13 Mahals. It has 16 ports of which the principal are Veraval and Mangrol. The principal rivers in the State are the Bhadar, Uben, Ozal, Hiran, Saragwati, Machbundi, Singhadra, Moghal, Vrajni, Naval and Sabli. The capital town of Junagadh which is one of the most picturesque towns in India, is situated on the slope of the Girnar and Datar Hills while in antiquity and historical interest it yields to none. The Upperkote or old citadel contains interesting Buddhist caves and the whole of the ditch and neighbourhood is honeycombed with caves or their remains. There are a number of fine modern buildings in the town. The famous Ashoka inscription of the Buddhist time carved out on a big bolster of black granite stone is housed at the foot of the Girnar Hill which is sacred to the Jains the Shivaites the Vaishnavites and other Hindus. To the south west of the Girnar Hill lies the extensive forest of Gir comprising 494 sq. miles, 823 acres and 10 gunthas. It supplies timber and other natural products to the residents of the State and the neighbouring districts and is unique as the sole stronghold of the Indian lion. The area of the State is 3,336 sq. square miles and the average revenue amounts to about Rs. 85,00,000. The total population according to the census of 1921 was 465,493 of which 365,093 were Hindus, 90,091 Mahomedans, 7,216 Jains, 90 Christians, 53 Parsis, while 40 were of other castes. Until 1472 when it was conquered by Sultan Mahmood Begra of Ahmedabad, Junagadh was a Rajput State ruled by Chiefs of the Chudasama tribe. During the reign of the Emperor Akbar it became a dependency of Delhi under the immediate authority of the Moghal Viceroy of Gujarat. About 1735 when the representative of the Moghals had lost his authority in Gujarat Sher Khan Babi the ancestor of the present Babi Rulers, expelled the Moghal Governor and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The principal articles of production in the State are cotton, bajri, jawar,

sassaparilla wheat rice sugarcane cereals, grass timber stone castor-oil fish, country tobacco groundnuts coconuts, bamboos etc., while those of manufacture are ghee molasses sugarcandy copper and brassware dyed cloth gold and silver embroidery pottery hardware leather, bamboo furniture, etc. The State pays a tribute of Rs 28,394 annually to the Paramount Power and a *Peshkashi* of Rs 37,210 to His Highness the Gaekwar. On the other hand the State of Junagadh receives a tribute styled *Zorlatbi* amounting to Rs 92,421 from 134 States a relic of the days of Mahomedan supremacy. The State maintains Junagadh State Forces and the Mahab Khanji Infantry the sanctioned strength of each of them is 172.

The Chief bears the title of Nawab the present Nawab His Highness Sir Mahabat Khan III K. C. S. I. is the ninth in succession and seventh in descent from His Highness Bahadurkhanji, I the founder of the Babi family of Junagadh in 1785 A.D. His Highness the Nawab Sahib was born on 2nd August 1900 and succeeded to the Gadi in 1911 visited England in 1913-14 received his education at the Mayo College Ayrer and has been invested with full powers in March 1920. His Highness the Nawab Sahib is the ruler of the Premier State in Kathiawar ranks first amongst the Chieftains of Kathiawar exercising plenary powers and enjoys a salute of 15 guns personal 13 permanent and 15 local within the territorial limits of the Junagadh State. Languages spoken—Gujarati and Urdu Capital—Junagadh.

Ruler—His Highness Sir Mahabat Khanji Basulkhaji K. C. S. I.

Heir-apparent—Mahomed Dilawar Khanji

Prince—Mahomed Himat Khanji

Nawanagar State on the southern shore of the Gulf of Cutch has an area of 3,791 square miles. The Maharaja of Nawanagar is a Jadeja Rajput by caste, and belongs to the same family as the Rao of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethwas then established at Ghumli. The town of Jamnagar was founded in 1640. The present Jam Sahib is the well known cricketer H. H. Jam Sahib Shri Ranjitbhai Vibhaji who was born in 1872 and succeeded in 1907. The principal products are grain, cotton and oil seeds shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs 1,20,008 per annum jointly to the British Government the Gaekwar of Baroda and the Nawab of Junagadh. The State maintains two squadrons of Nawanagar State Lancers. The Capital is Jamnagar a flourishing place nearly 4 miles in circuit situated 5 miles east of the port of Bodi. Population 345,353 Revenue nearly Rs 80 lakhs.

Revenue Secretary Gokulbhai B. Desai, Bar-at-law

Political Secretary Parahuram B. Junnarkar, B.A., LL.B.

General Secretary Hirabhai M. Mehta B.A. (Cantab.) Bar-at-law

Cutch—The State is bounded on the north and north west by Sind on the east by the

Palanpur Agency on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch is 7,818 square miles. The Capital is Bhuj where the ruling Chief (the Maharaja) His Highness Maha Rao Sri Khenarji Savai Bahadur G.O.B., G.O.I.M., resides. From its isolated position, the special character of its people, their peculiar dialect and their strong feeling of personal loyalty to their ruler the peninsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or children of Jada. The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch and wheat barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own Estates and over their own vassals. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayats. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency. The number of these chiefs is 137, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj the State now pays Rs 82,357 annually as an Anjar equivalent to the British Government. The military force consists of about 1,000 in addition to which there are some irregular infantry and the Bhayats could furnish on requisition a mixed force of four thousand.

Palanpur Agency—This group of States in Gujarat comprises two first class States Palanpur and Radhanpur and a few minor States and petty talukas. Its total area is 6,498 square miles and the population is 518,566. Its gross revenue is about 27 lakhs. The territory included in the Agency has, like the more central parts of Gujarat passed during historical times under the sway of the different Rajput dynasties of Anhilwada, the early Khilji and Tughlak Shahi dynasties of Delhi the Ahmedabad Sultans the Moghal Emperors the Marathas and lastly the British. The State from which the Agency takes its name is under the rule of Captain His Highness Zubdatul-Mulk Dewan Mahakhan Talay Mahomed Khan Bahadur, K.O.B., K.C.V.O., Nawab of Palanpur. His Highness is descended from the Usafzai Lohani Fethan an Afghan tribe who appeared in Gujarat in the 14th century. The connection of the British Government with the State dates from 1819 in which year the Ruler was murdered by a body of nobles. Two high roads from Ahmedabad

pass through the State and a considerable trade in cloths, grain, sugar and rice is carried on. The State pays tribute of Rs 38,462 to the Gaekwar of Baroda. The capital is Palanpur situated on the B & C I Railway and is the junction station of the Palanpur Dewa Branch of B & C I Railway. It is a very old settlement of which mention was made in the 8th century.

Radhanpur is a first class State with an area of 1,180 square miles which is held by a branch

of the illustrious Babi family who since the reign of Humayun have always been prominent in the annals of Gujarat. The present chief is H. H. Jalal-ud-din Khanji, the Nawab of Radhanpur. The State maintains a Police force of 200. The principal products are cotton, wheat and grain. The capital is Radhanpur town a considerable trade centre for Northern Gujarat and Cutch. Bami has a cotton press and three spinning factories. There is one spinning factory at Munjpur and 1 at Lolada.

INDIAN STATES UNDER LOCAL GOVERNMENTS

The territories under the rule of Indian Princes and Chiefs in the Bombay Presidency extend over an area of 28,089 square miles. The characteristic feature of the Bombay States is the great number of petty principalities. The recognition of these very numerous jurisdictions is due to the circumstance that the early Bombay administrators were induced to treat the *de facto* exercise of civil and criminal jurisdiction by a landholder as carrying with it a quasi-sovereign status. In no part of India is there a greater variety of principalities. Some of the largest are of modern origin having been founded by the Marathas in the general scramble for power in the middle of the 18th century. But the Bajput houses in the Gujarat Agencies date from earlier times. Interesting traces of ancient history are to be found at Sachin and Janjira where Chiefs of foreign descent, descended from Abyssinian admirals of the Deccan fleets, still remain. A few aboriginal Chiefs Bhils or Kolis exercise a very limited authority in the Dangas and the Jilly country that fringes the Mahi and the Narbada rivers.

The variety of the relations which under the terms of the several treaties subsist between the British Government and the rulers of the different States and the general superintendence exercised by Government as the Paramount Power necessitate the presence of an Agent or representative of Government at the Principal Courts. The smaller and less important States are either grouped together under the general supervision of a Political Agent or are looked after by the Collectors of the districts which they adjoin. The position of the Agents varies, roughly speaking with the importance of the State. In some cases he does little more than give advice and exercise a general surveillance. In other cases the Agents are invested with a direct share in the administration while States the Rulers of which are ruler are directly managed by Government Officers or under arrangements approved by Government. Some of the States are subordinate to other States and not in direct relations with the British Government. In these cases the status of the feudatories is usually guaranteed by Government. The powers of the Chiefs are regulated by treaty, or custom, and range downwards to a mere right to collect revenue in a share of a village without criminal or civil jurisdiction as in the case of the petty Chiefs in the Mahi Kantha and Rewa Kantha Agencies.

The number of Indian States in the Bombay Presidency is 151 with an area of 28,089 square miles and population (1921) of 3,879,006. They

are divided for administrative purposes into the following Agencies: Dlgam Agencies: Savantvadi, Biljapur Agency, Jath, Dharwar Agency, Savanur, Kaira Agency, Chamba, Kolaba Agency, Janjira, Kolhapur, Residency and Southern Maratha Country States Agency, 9 States (Kolhapur with 9 feudatories), Jamkhandi, Kurundwad, Senior Kurundwad Junior, Miraj Senior, Miraj Junior, Mudhol, Ramdurg and Sangli. Mahi Kantha Agency, 51 States (Principal States Idar and Danta), Nasik Agency, Surana, Poona Agency, Bhur, Rewa, Kantha Agency, 62 States (Principal States Balasnor, Baria, Chhota Udaipur, Lunawada, Rajpilla and Sant), Satara Agency, Aundhi and Phaltan, Sholapur Agency, Akalkot, Sukkur, Agency, Khairpur, Surat Agency, 3 States (Bausda, Dharampur and Sachin) and 14 Dang Chiefs, Thana Agency, Jawhar. The table below gives details of the area of the more important States—

State	Area in sq miles	Population (in 1921)	Approximate Revenue Rs
Balasnor	189	44,073	20,000
Bausda	215	40,125	794,000
Baria	813	137,289	17,44,512
Chamba	350	71,715	9,44,052
Chhota Udaipur	890	123,746	1,17,458
Danta	347	28,028	1,51,377
Dharampur	704	95,171	12,45,000
Idar	1,669	20,451	10,48,831
Janjira	277	94,530	6,49,446
Jawhar	310	49,662	6,06,836
Khairpur	6,050	193,162	27,43,796
Kolhapur	3,164	832,376	90,80,000
Lunawada	358	83,442	4,82,238
Mudhol	308	60,141	4,72,000
Rajpilla	1,517	158,454	32,31,190
Sachin	49	19,977	4,08,089
Sangli	1,112	221,814	12,40,000
Savantvadi	925	206,440	7,63,281
Sant	394	70,964	3,87,883

Biljapur Agency—This comprises the Satara Jaghir of Jath (9805 square miles in area). On the annexation of Satara in 1849 Jath and Daphlapur like other Satara Jaghires became feudatories of the British Government. The latter has more than once interfered to adjust the pecuniary affairs of the Jath Jaghir and in consequence of numerous acts of oppres-

sion on the part of the then ruler was compelled to assume direct management from 1874 to 1885. The small estate of Daphlapur with an area of 96.8 square miles lapsed to the Jath Jaghir on the demise of its last ruler Bahadur Sahib Daphle in January 1917. The Chief of Jath who belongs to the Mahuratta caste ranks as a first class Sardar. He holds a sanad of adoption and the succession follows the rule of primogeniture. The gross revenue of the State is about 3 lakhs chiefly derived from land revenue. The Jath State pays to the British Government Rs 6400 per annum in lieu of horse contingent and Rs 4547 on account of Sardeshmukhi rights.

Political Agent—V H Naik M A Bar at Law Collector of Bijapur

Dharwar Agency—This comprises only the small State of Savanur. The founder of the reigning family who are Mahomedans of Pathan origin was a Jaghirdar of Emperor Aurangzeb. At the close of the last Maratha War the Nawab of Savanur whose conduct had been exceptionally loyal was confirmed in his possession by the British Government. The State pays no tribute. The principal crops are jowari and cotton. The area is 70 square miles and population 18,890. The revenue is Rs 15,741 11 7. The present chief is Captain Meherian Nawab Abdul Majid Khan Diler Jang Bahadur Nawab of Savanur.

Political Agent A Walter ICS

Kolarn Agency—This includes only the State of Cambay at the head of the Gulf of the same name. Cambay was formerly one of the chief ports of India and of the Ahilyada Kingdom. At the end of the thirteenth century it is said to have been one of the richest towns in India. At the beginning of the sixteenth century also it formed one of the chief centres of commerce in Western India. Factories were established there by the English and the Dutch. It was established a distinct State about 1730 the founder of the present family of Chudas being the last but one of the Mahomedan Governors of Gujarat. The present Nawab is His Highness Mirza Hussain Yawar Khan who is a Shikoh Mogul of the Najum-ul-Mulk family of Persia and was born on the 16th May 1911. His father the late Nawab Jafar Ali Khan died on 21st January 1915 leaving him a minor. The State is therefore under British Administration. The State pays a tribute of Rs 19,24 to the British Government. Wheat and cotton are the principal crops. There is a broad gauge line from Cambay to Toldad connecting with the B B & C I Railway at Anand. Cambay is a first class State having full jurisdiction. Revenue is about eight lakhs. The area of the State is 300 square miles population 1,17,115.

Political Agent M S Jayakar M A

Administrator V K Namjoshi

Kolaba Agency—This Agency includes the State of Janjira in the Konkan a country covered with spurs and hill ranges and much intersected by creeks and backwaters. The ruling family is said to be descended from an Abyssinian in the service of one of the Nizam Shahi Kings of Ahmednagar at the end of the fifteenth century. The most noticeable point

in its history is the successful resistance that it alone of all the States of Western India, made against the determined attacks of the Marathas. The British on succeeding the Marathas as masters of the Konkan refrained from interfering in the internal administration of the State. The chief is a Sunni Mahomedan, by race a Siddi or Abyssinian with a title of His Highness the Nawab. He has a sanad guaranteeing succession according to Mahomedan law and pays no tribute. Till 1868 the State enjoyed singular independence there being no Political Agent and no interference whatever in its internal affairs. About that year the misadministration of the chief, especially in matters of police and criminal justice became flagrant those branches of administration were in consequence taken out of his hands and vested in a Political Agent. The last ruler, H H Nawab Siddi Sir Ahmed Khan GOLTZ died on 2nd May 1922 and was succeeded by his son Siddi Muhammad Khan born on the 7th March 1914. The area of the State is 37 square miles and the population 38,30. The average revenue is 8 lakhs including that derived from a small dependency named Jafferabad in the south of Kathla war under the Kathlawar Agency. The State maintains an irregular military force of 231. The capital is Murud on the main land, the name of Janjira being retained by the island fort opposite. The Chief is entitled to a dynastic salute of 11 guns. In recognition of services rendered in connection with the war the last ruler's salute was raised on the 1st January 1918 to 13 guns personal and 13 permanent within the limits of his own State from the 1st January 1911. The State is now under a minority administration with the minor Nawab as Regent assisted by a Dewan appointed with the approval of Government. The present Dewan is Mr P B Kapadia SA a retired Deputy Collector.

Kolhapur Agency—Kolhapur is a State with an area of 9,217 square miles and population of 333,726. Subordinate to Kolhapur are nine feudatories of which the following four are important: Valsagarh Badva Kagal (senior) and Ichalkaranji. The ruling house traces its descent from a younger son of Chivaji founder of the Maratha power. The prevalence of piracy from the Kolhapur port of Malvan compelled the Bombay Government to send expeditions against Kolhapur in 1666 and again in 1792 when the Raja agreed to give compensation for the losses which British merchants had sustained since 1780 and to permit the establishment of factories at Malvan and Kolhapur. Internal dissensions and wars with neighbouring States gradually weakened the power of Kolhapur. In 1812 a treaty was concluded with the British Government by which, in return for the cession of certain ports the Kolhapur Raja was guaranteed against the attacks of foreign powers while on his part he engaged to abstain from hostilities with other States and to refer all disputes to the arbitration of the British Government. The principal articles of production are rice jowar and sugar-cane and the manufactures are coarse cotton and woollen cloths, pottery and hard

ware. The State pays no tribute and supports a military force of 692. The nine feudatory estates are administered by their holders except in the case of two whose holders are minors. Kolhapur proper is divided into seven *pethas* or *talukas* and three *mahals* and is managed by the Maharaja, who has full powers of life

and death. The Southern Mahratta Railway passes through the State and is connected with Kolhapur City by a line which is the property of the State.

Resident and Senior Political Agent for Kolhapur and the Southern Mahratta Country—Lieut. Col. E. O'Brien.

Southern Maratha Country States—The Agency consists of the following eight States—

Name of State	Area in square miles	Population	Tribute to British Government	Average revenue
			Rs.	Rs.
Bangli	1 136	221 321	1 25 000	18 08 222
Miraj (Senior)	342	82 580	12 558	4 80 8.7
Miraj (Junior)	1 264	84 665	7 389	5 53 298
Kurundwad (Senior)	1 824	38 760	9 619	8 05 017
Kurundwad (Junior)	114	34 288		1 86 750
Jamkhandi	5.4	101 135	20 516	5 97 466
Mudhol	368	80 140	2 672	4 15 346
Ramdurg	169	33 997		2 81 307
Total	3 032	608 946	1 87 704	45 19 453

Mahli Kantha—This group of States has a total area of 3 124 square miles and a population of 450 478 including that of Idar which is 220 851. The revenue is about 14 lakhs. The Agency consists of the first class State of Idar and 51 small States. Idar covers more than half the territory. It has an area of 1 668 square miles and an average revenue of Rs. 15 63 17½. The present Ruler of Idar, Lieutenant Colonel H. H. Maharaja Shri Dowlat Singhji K.C.S.I., is a Rajput of the Rathod clan. He was born in 13 84 and ascended the Gadi in 1911. His Highness had been on active service in Egypt during the great war. The subordinate feudatory *Jagirdars* are divided into 3 classes. The *Jagirdars* comprised in the class of *Bhayats* are cadets of the Ruling House to whom grants have been made in maintenance or as a *Jivarak*. Those known as *Sardar Pat tawats* are descendants of the military leaders who accompanied Anand Singh and Rai Singh the founder of the present Marwar dynasty when they took possession of the State in the first quarter of the eighteenth century and to whom grants of land were made by Maharaja Anand Singh in 1741 A.D. on condition of military service. In the class of the *Bhoomias* are included all subordinate feudatories who were in possession of their *Pattas* prior to the advent of the present Marwar dynasty. The *Pattas* which they hold were acquired by their ancestors by grant from the former Rao rulers of the State. The Maharaja receives Rs. 52 427 annually on account of *Khichdi* and other *Raj Raks* from its subordinate *Sardars*, the tributary *Talukas* of the Mahli Kantha Agency and others and pays Rs. 30 340 as *Ghadana* to Gaekwar of Baroda through the British Government. Of the smaller states *Polo* and *Danta* are two important second class States. The names of their Chiefs are Rao Shri Hamir Singhji and Maharana Shri Hamir Singhji. Nine other States are of some importance and the remainders are estates belonging to Rajput or Koli Thakurs, once the lawless

feudatories of Baroda and still requiring the close supervision of the Political Officer.

Political Agent—Major A. S. Meek C.M.C.
Nasik Agency—This consists of one State *Burgana*, lying in the north west corner of the Nasik District. *Burgana* has an area of 880 square miles and a population of 14 912. The ruling chief is Prataprao Shankarrao Deshmukh who is descended from a Maratha Pawar family. He rules the State subject to the general control of the Collector and Political Agent. The revenue of the State is Rs. 80 755.

Rewa Kantha Agency—This Agency with an area of 4 906 square miles and a population of 665 099 comprises 61 States of which Rajpipla is a first class State. 5 are second class, one is third class and the rest are either petty States or *talukas*. Among these petty States are Banjeli in the north, Bhadrawa and Umata in the west, Jambhughoda in the south east and two groups of *Mohwas*. The 28 *Sankheda* *Mehwas* petty estates lie on the right bank of the Narbada while the 24 *Pandur* *Mohwas* petty estates including *Dodka*, *Anghad* and *Rarka* which together form the *Dodka* *Mohwas* are situated on the border of the Mahli.

The following are the statistics of area and population for the principal States—

State	Area in square miles	Population
Balasenor	189	44 089
Baria	813	137 291
Chhoti Udaipar	878	125 702
Lunavada	388	83 136
Narukot (Jambhughoda)	143	9 540
Rajpipla	1 617	168 485
Sunt	394	70 957
Other Jurisdictional States, Civil Stations and Thana Circles	639	113 977

Under the first Anhilvada dynasty (740-961), almost all the Rewa Kantha lands except Charnanar were under the government of the Bhatias, that is, Koli and Bhil chiefs. In the eleventh, twelfth and thirteenth centuries chiefs of Rajput or part Rajput blood driven south and east by the pressure of Muhammadan invasions took the place of the Koli and Bhil leaders. The first of the present States to be established was the house of the Maharaja of Rajpipla a Gohel Rajput.

Rajpipla—This State lies to the south of

Satara Jahagirs—Under this heading are grouped the following States—

the Narbada. It has an area of 1,517½ square miles. The lands are rich and very fertile and except a few forest-clad hills are suitable and available for cultivation in large quantities in the south-east talukas. The family of the Maharaja of Rajpipla Captain H. H. Maharaja Shri Bir Vijayaajinh, M.C.S. is said to derive its origin from a Rajput of the Gohel clan. Cotton is the most important crop in the State. In the hills there are valuable teak forests. The capital is Rajpipla which is connected with Ankleswar by railway built by the State.

State	Area in sq miles	Population	Revenue in lakhs
Aundh	501	64,560	Rs 3
Phaltan	397	43,265	3
Bhor	925	130,420	5
Akalkot	408	81,250	9
Jath	981	82,604	3½

These were formerly feudatory to the Raja of Satara. In 1840 five of them including the Jahagir Estate which has since reverted to the Jath State were placed in relations with the Collector of Satara, and Akalkot with the Collector of Sholapur. Subsequently the Jahagir of Bhor was transferred to the Collector of Poona, and Jath to the Agency for the Southern Mahratta Country States. The latter has since been placed in relation with the Collector of Bijapur. The ruling Chiefs are as follows—

State	Ruling Chiefs	Tribute to British Government
		Rs
Aundh	Meherban Bhavadrao Shrinivasa Rao alias Bala Sahet Pant Pratinidhi	
Phaltan	2nd Lieutenant Meherban Maloji Rao Mudhoji Rao alias Nana Sahab Naik Nimalkar	9,600
Bhor	Meherban Baghunath Rao Shankarrao alias Baba Sahab Pant Sahib	4,684
Akalkot	Meherban Shrimant Vijayaajinh Pathejinh Raja Bhonsale Raja Sahab of (minor)	14,522
Jath	Meherban Ramrao Amritrao alias Aba Sahab Dase	10,129

Savantwadi—This State has an area of 925 square miles and population of 206,440. The average revenue is Rs 7,68,287. It lies to the north of the Portuguese territory of Goa, the general aspect of the country being extremely picturesque. Early inscriptions tell the history of the State back to the sixth century. So late as the nineteenth century the ports on this coast swarmed with pirates and the country was very much disturbed. The present Chief is Khem Savant V alias Bapu Sahab Bhonsale. Rice is the principal crop of the State and it is rich in valuable teak. The sturdy Marathas of the State are famous troops for the Indian Army and

supply much of the immigrant labour in the adjacent British districts. The Capital is Savantwadi also called Sundar Wadi or simply Wadi.

Sholapur Agency—This contains the State of Akalkot which forms part of the table land of the Deccan. It has an area of 408 square miles and a population of 81,250. In the beginning of the eighteenth century the Akalkot territory which had formerly been part of the Mussulman kingdom of Ahmednagar, was granted by the Raja of Satara to a Maratha Sardar the ancestor of the present chief subject to the supply of a contingent of horse. In 1849 after the annexation of Satara, the Akalkot Chief became a feudatory of the British Government.

Baria—The State has an area of 813 square miles with a population of 137,291 and is situated in the heart of the Panchmahals district. The Capital Devgad Baria is reached by road from Piprod station on the B. B. & C. I. Railway, at a distance of eight miles. The average revenue of the State is about 10 lakhs. The State enjoys plenary powers. The Ruler Captain His Highness Maharaja Shree Sir Ranjitsinhji K.C.S.I. is the direct descendant of the Great House of Richhi-Ohowhan Rajputs who ruled over Gujarat for 244 years with their capital at Champaner, with the proud title of Pavapatis. His family has the noblest historical traditions. The State pays no tribute either to the British Government or any other Indian State. He enjoys a salute of eleven guns. He served in France and Flanders in the Great European War and in the Afghan War 1919. The staple crop is maize. The forests are rich in teakwood and all sorts of jungle produce. There is a large scope for forest industries.

The Sukkar Agency—This consists of the Khairpur State a great alluvial plain in Sind. It has an area of 6,050 square miles and a population of 1,08,152 and revenue of over 26 lakhs. The present chief H. H. Mir Ali Nawas Khan belongs to a Baloch family called Talpur. Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783 the history of Khairpur belongs to the general history of Sind. In that year

Mir Fateh Ali Khan Talpur established himself as Ruler of Sind and subsequently his nephew Mir Sohrab Khan Talpur founded the Khairpur branch of the Talpur family. In 1832 the individuality of the Khairpur State as separate from the other Talpur Mirs in Sind was recognised by the British Government in a treaty under which the use of the river Indus and the roads of Sind were secured to the British. The chief products of the State are oil-seeds, ghee, hides, tobacco, fuller's earth, carbonate of soda, cotton, wool and grain. The manufactures comprise cotton fabrics and various kinds of silverware and metal work. There is an industrial school at the capital where lacquer work, carpets, pottery etc. are produced. The Railway from Hyderabad to Rohri runs through the whole length of the State. The rule of the Mirs has all along been patriarchal until very recently when the present Ruler Mir Ali Nawas Khan Talpur, an educated and enlightened prince, having imbibed with the characteristics of the present age, last year turned a new leaf in the administration of the State and replaced the old Vazir system by a constitution of three members, he being the President. The State supports a Military Force of 330 Rank and file composed of 21 Infantry, 72 Cavalry and 42 Band and Bagpipers including an Imperial Service Camel and Baggage Corps which is 138 strong and served at the Front.

Political Agent The Collector of Sukkur

Surat Agency—This is a small group of three second class States under the Political Agent, Surat.

State	Ruling Chiefs	Area in sq miles	Population (1921)
Dharapur	Maharaja Bhri Vijayadevi] Mohandev]	704	85,171
Baneda	Maharaval Bhri Indrasinhji Pratapninhji	215	40,120
Sachin	His Highness Nawab Sidi Ibrahim Muhammad Yakut Khan Mubassarat Daula Nazrat Jung Bahadur	40	19,977

The joint revenue of these States is Rs. 24,51,000. Tribute is paid to the British Government of Rs. 9,154. There is also attached to this Agency a tract of country known as the Dangas which has an area of 563 square miles and a population of 24,576 and a revenue of Rs. 24,711. The country is divided into 14 Dangas or States of very unequal area, each under the purely nominal rule of a Bhil Chief with the title of Raja, Nalik, Pradhan or Povar.

Thana Agency—This includes the State of Jawhar in the Thana District on a plateau above the Konkan plain. It has an area of

310 square miles and a population of 49,662 and revenue of 6 lakhs. Up to 1294 the period of the first Mahomedan invasion of the Deccan Jawhar was held by a Vani, not a Koli chief. The first Koli chief obtained his footing in Jawhar by a device similar to that of Dido when he asked for and received as much land as the hide of a bull would cover. The Koli chief cut a hide into strips and thus enclosed the territory of the State. The present chief is Raja Vikramsinh Patangsinh who administers the State assisted by a Karbhari under the supervision of the Collector of Thana who is Political Agent of the State.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar—This State which at one time comprised almost the whole of the Northern Bengal Assam and a part of Bhutan now known as the Duars is a low lying plain in North Bengal. It has an area of 1,507 square miles a population of 5,29,939 and a revenue of nearly 40 lakhs. By the demise of the late Maharaja His Highness Maharaja Sir Jitendra Narayan Bhup Bahadur in December 1923 in England, his eldest son Yuvaraj Kumar Jagaddipendra

Narayan (born on December 15, 1915) succeeded to the gadi at the age of 7 which necessitated a minority administration under the guidance of a Regent. His Highness the Maharaja belongs to the Kahatriya Varna of Kahatriya origin. The present Maharaja has three sisters Maharajkumari Ila Devi (aetad 13), Ayecha Devi (aetad 8) and Menaka Devi (aetad 7) and one brother Maharajkumar Indrajit Narayan (aetad 9). Her Highness the Maharani Sahiba

of Cooch Behar was appointed Regent under the wishes of the late Maharaja and administers the State on behalf of her minor son with a Council of Regency comprising four members at present of which Her Highness is the President. Cooch Behar once formed part of the famous kingdom of Kamrup. British connection with it began in 1782 when owing to invasions of the Bhutias the assistance of the East India Company was invoked. The chief products of the State are rice, jute, mustard seed and tobacco. The capital is Cooch Behar which is reached by the Cooch Behar State Railway a branch of the Eastern Bengal State Railway System.

Tripura—This State lies to the east of the district of Tippera and consists largely of hills covered with dense jungle. It has an area of 4,116 square miles and a population of 304,431. The revenue from the State is about 14 lakhs and from the Zamindari in British territory a slightly smaller sum. The present ruler is Maharaja Bir Bikram Kishore Deb Barman Manikya Bahadur who is a Kachatriya by caste and comes of the Lunar race and is entitled to a salute of 13 guns. He succeeded the late Maharaja Bharendra Kishore Manikya Bahadur on 13th August 1923 and is only 1 year of age. The military prestige of Tripura dates back to the fifteenth century, and a mythical account of the State takes the history to an even earlier date. Both as regards its constitution and its relations with the British Government the State differs alike from the large Native States

of India, and from those which are classed as tributary. Besides being the ruler of Tripura the Maharaja also holds a large landed property situated in the plains of the Districts of Tippera, Noakhali and Sylhet. This estate covers an area of 600 square miles and is held to form with the State an indivisible Raj. Disputes as to the right of succession have occurred on the occasion of almost every vacancy in the past producing in times gone by disturbances and domestic wars and exposing the inhabitants to serious disorders and attacks from the Kachis who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently however been embodied in a *sanad* which was drawn up in 1904. The chief products of the State are rice, cotton, tea and forest produce of various kinds the traffic being carried chiefly by water. Owing to the fact that the Maharaja is too young to have full administrative powers the administration is conducted by a Council of Administration consisting of the following members—

President—Maharaj Kumar Navadvip Chandra Deb Barman *Vice President*—Raj J C Sen Bahadur (lent to the State by the British Government.)

Maharaj Kumar Birendra Kishore Deb Barman and Thakur Protap Chandra Roy *Members*

The State Courts are authorised to inflict capital punishment.

Political Agent Magistrate and Collector of Tippera (*ex officio*)

UNDER THE GOVERNMENT OF BIHAR AND ORISSA

Under this Government there are the Chota Nagpur Feudatory States of Kharsawan and Sarakela and the Orissa Feudatory States 24 in number. The total area is 28,856 square miles and the total population 8,931,322. The average revenue is Rs. 81,64,509. The inhabitants are hill men of Kolarian or Dravidian origin and their condition is still very primitive. The Chief of Kharsawan belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1798 when in consequence of disturbances on the frontier of the old Jungle Mahals the Thakur of Kharsawan and the Kunwar of Sarakela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The Chief is bound when called upon to render service to the British Government but he has never had to pay tribute. His present *sanad* was granted in 1910. He exercises all administrative powers, executive and judicial subject to the control of the Political Agent and Commissioner, Orissa Feudatory States. The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Sarakela is held by the elder branch of the Porahat Raja's family.

Orissa Feudatory States—This group of 24 dependent territories is situated between the Mahanadi Delta and the Central Provinces and forms the mountainous background of Orissa. The names of the individual States are Athgarh, Talcher, Mayurbhanj, Nilgiri,

Konjhar, Pal Lahara, Dhenkanal, Athmalik, Hindol, Narasingpur, Barman, Tigra, Khanpara, Nayagarh, Ranpur, Dasalla and Baud. To these there were added in 1905 the following States: Baura, Balakhol, Sonpur, Patna and Kalahandi from the Central Provinces and Gangpur and Bonal from the Chota Nagpur States. The total population is 3,777,344 with an average revenue of Rs. 78,30,124. The Feudatory States have no connected or authentic history. Comprising the western and hill portion of the province of Orissa, they were never brought under the central government but from the earliest times consisted of numerous petty principalities which were more or less independent of one another. They were first inhabited by aboriginal races who were divided into innumerable communal or tribal groups each under its own chief or headman. These carried on incessant warfare with their neighbours on the one hand and with the wild beasts of the forests on the other. In course of time their hill retreats were penetrated by Aryan adventurers who gradually overthrew the tribal chiefs and established themselves in their place. Tradition relates how these daring enterprisers, most of whom were Rajputs from the north, came to Puri on a pilgrimage and remained behind to found kingdoms and dynasties. It was thus that Jal Singh became ruler of Mayurbhanj over 1,300 years ago and was succeeded by his eldest son while his second

son seized Kewajhar. The Chiefs of Band and Daspalla are said to be descended from the same stock and a Rajput origin is also claimed by the Rajas of Athmalik Narasingh pur Pal Lahara, Talcher and Tigiria. Nava garh, it is alleged was founded by a Rajput from Rewah and a scion of the same family was the ancestor of the present house of Khand para. On the other hand the chiefs of a few States, such as Athgarh Baramba and Dhen Kanai owe their origin to favourites or distinguished servants of the ruling sovereigns of Orissa. The State of Ranpur is believed to be the most ancient the list of its chiefs covering a period of over 3,600 years. It is noteworthy that this family is of Khona origin, and furnishes the only known instance in which amid many vicissitudes the supremacy of the original settlers has remained intact. The State acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders but in other respects neither the ancient kings of Orissa nor their successors the Mughals and Marathas ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them but they are made up in most part of legend and fiction and long genealogical tables of doubtful accuracy and contain very few features of general interest. The British conquest of Orissa from the Marathas which took place in 1803 was immediately followed by the submission of ten of the Tribu-

tary States, the Chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Marathas in 1803 with the rest of Orissa but, as they had always been tributary states rather than regular districts of the native governments they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors that would preclude their being brought under the ordinary jurisdiction of the British courts if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and this was afterwards accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India but until lately forest conservancy was practically unknown. The States have formed the subject of frequent legislation of a special character. The relations with the British Government are governed by sanads which in the case of Gangpur and Bonal were last revised in 1919 and in the case of the others in 1915. They define the rights, privileges, duties and obligations of the Chiefs providing for the settlement of boundary disputes and indicating the nature and extent of the control of the Political Agent and Commissioner.

Political Agent and Commissioner C. L. Phillip

UNDER THE GOVERNMENT OF THE UNITED PROVINCES

Three States—Rampur Tehri and Benares are included under this Government—

State	Area Sq Miles	Population	Revenue in lakhs of Rupees
Rampur	892	458,607	54
Tehri (Garhwal)	4,500	318,482	12
Benares	875	302,735	28

Rampur State—The State of Rampur was founded by Nawab Sayed Ali Mohammad Khan Bahadur in the middle of the 18th century and his dominions included a considerable portion of what is now known as Rohilkhand. The founder belonged to the famous Sayeds of the Bareilly clans in the Muzaffarnagar district and was a statesman of remarkable ability. He rendered invaluable services to the Moghal Emperor who recognised him as Ruler of Rohilkhand.

Upon his death his Kingdom underwent many vicissitudes and was considerably reduced in size during the reign of his son Nawab Sayed Fazlulla Khan Bahadur. The Province of Rohilkhand had now passed into the hands of the East India Company. He was most loyal and true to the British Government to whom he always looked up for help during those unsettled days and he gave tangible proof of his loyalty when during the war against France he offered all his cavalry 2,000 strong to the British Government in 1778

and received the following message of thanks from the then Governor General—

That in his own name as well as that of the Board he returned him the warmest thanks for this instance of his faithful attachment to the Company and the English Nation.

Another opportunity arose for the ruler of Rampur to evince his steadfast loyalty and devotion to the Imperial Cause on the outbreak of the Mutiny of 1857. His Highness Nawab Sir Sayed Yusuf Ali Khan Bahadur occupied the Musnad of Rampur in those days. From the very start till peace was re-established in the country he was lavish in his expenditure of men and money on the side of the British Government. He fought their battles, saved the lives of many Europeans whom he provided with money and other means of comfort and had so much established his reputation as a good administrator that he was placed in charge of the Moradabad district. These signal services were recognised by the Government by the grant of an Illaqa besides other marks of distinction.

The reign of the present ruler, His Highness Nawab Sir Sayed Mohammad Hamid Ali Khan Bahadur stands out unique in many ways. Rampur has made great strides in trade and commerce and in fact in every walk of life. His Highness takes keen interest in education and has not only contributed handsome donations but make annual grants to the various educational institutions.

He is no whit behind his compatriots in his loyalty to the British Government. The great War of 1914 found him foremost in offering his

personal services and all the resources of his State—men money and material—to the British Government. The Rampur I S. Infantry was sent to East Africa and returned home after nearly four years service and won the favourable remarks of high British Officers. The Rampur Lancers also performed their allotted duties in the War. Besides the expenditure involved in this, His Highness also participated in the scheme of the Hospitalship, Loyalty, and contributed a lakh rupees towards the cost and upkeep of it. His other contributions to the various funds amount to over half a lakh of rupees, and he also subscribed Rs 7 00 000 to the War Loans. These are some of the principal contributions made by His Highness towards the Imperial cause in the War. Afghan War of 1919 again found him prompt in his offer of assistance. This time the I S. Lancers and the Imperial Service Infantry were sent on campaign in British India.

His Highness is a Knight Grand Commander of the Most Exalted Order of the Star of India and of the most Eminent Order of the Indian Empire, Knight Grand Cross of the Royal Victorian Order, a Colonel in the Indian Army and an A.D.C. to His Imperial Majesty the King Emperor. He had the unique honour of serving on His Imperial Majesty's Staff in the Coronation Durbar of 1911 at Delhi.

His Highness has three sons—(1) Nawab Sayed Raza Ali Khan Bahadur Hidir—Apparent Sahibzada Sayed Jafar Ali Khan Bahadur and Sahibzada Sayed Abdul Kareem Khan Bahadur. The name of His Highness's grandson—son of the Hidir Apparent—is Sahibzada Sayed Murtez Ali Khan Bahadur.

The permanent Salute of the State is 1 guns and the annual income over fifty lakhs of rupees.

Tehrri State (or Tehri Garhwali)—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history of the State is that of Garhwali District; the two tracts having formerly been ruled by the same dynasty. Pradyumna Shah the last Raja of the whole territory was killed in battle fighting against the Gurkhas but at the close of the Nepalese War in 1815 his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1853 without issue and was succeeded by his near relative Bhawanji Shah and he subsequently received a *sansad* giving him the right of adop-

tion. The present Raja is Captain H. H. Narendra Shah C.S.I. The principal products are rice and wheat grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Raja has full powers within the State. The strength of the State forces is 130. The capital is Tehri, the summer capital being Pratapnagar 8 000 feet above the sea level.

Agent to the Governor General. The Governor of the U. P. of Agra and Oudh.

Benares—The founder of the ruling family of Benares was one Manse Ram who entered the service of the Governor of Benares under the Nawab of Oudh in the early eighteenth century. His son Balwant Singh, conquered the neighbouring countries and created a big state out of them over which he ruled till 1770. Raja Chet Singh succeeded him but was expelled by Warren Hastings in 1781. In 1794, owing to the maladministration of the estates which had accumulated under the Raja of Benares, an agreement was concluded by which the lands held by the Raja in his own right which was granted to him by the British Government were separated from the rest of the province. The direct control of the latter was assumed by the Government and an annual income of one lakh of rupees was assured to the Raja while the former constituted the Domains. Within the Domains the Raja had revenue powers similar to those of a Collector in a British District which were delegated to certain of his own officials. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April 1911 these Domains became a State consisting of the parganas of Bhadohi (or Konrh) and Chakia (or Kera Mangraur) with the town of Rammagar and its neighbouring villages. The Maharaja's powers are those of a ruling chief subject to certain conditions of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects and of a right of control in certain matters connected with excise. The present ruler is Lieut Colonel H. H. Maharaja Sir Prabhu Narayan Singh Bahadur C.O.S.I. G.O.I.E. M.P., who was born in 1855 and succeeded to the State in 1889. He is entitled to a salute of 15 guns and is a Hon. Lt. Colonel in the Indian Army. His heir apparent is Maharaj Kumar Aditya Narain Singh Bahadur.

PUNJAB STATES

The 13 Salute States of the Punjab were transferred to the Political charge of the Government of India with effect from the 1st November 1921. Area 31,264 square miles. Population (1921) 4 008 040. Revenue Rs 9 38,28,41 3-0.

These States may be grouped under three main classes. The Hill States which lie in the Punjab

Himalayas are held by families of ancient Rajput descent. To the south west lies the large Mohamadan State of Bahawalpur. The remaining Sikh States of Patiala, Jind Nabha, Kapurthala and Faridkot and the Mohammadan States of Malerkotla and Loharu lie east of Lahore in the eastern plains of the Punjab.

The list below gives details of the area, population and revenue of the 13 States —

Name	Area in square miles	Population (Census of 1921)	Revenue approximately in lakhs of Rupees
Bahawalpur	15 000	781 191	50 3. 624
Milaspur (Kahlar)	448	98 000	3 00 000
Chamba	3 216	141 887	7 91 000
Fazilkot	642	150 661	18 45 .83
Jind	1 250	508 183	26 00 000
Kapurthala	680	234 276	37 50 000
Loharu	22	20 614	1 31 3.0
Malerkotla	168	80 322	14,08 525
Mandi	1 200	19, 048	12.4. 150
Nabha	928	263 334	28 42 0.1
Patiala	5 082	1 499 730	1 28 50 000
Sirmur (Nabha)	1 138	1 40 468	6 00 000
Suket	4.0	54 326	21,34 486
Total	31 064	4 008 040	3 23 .8 411

Bahawalpur—A Native State in direct political relationship with the Government of India through the Agent to the Governor General Punjab States Agency. Bahawalpur is situated between the Punjab and Rajputana. Latitude $26^{\circ}41'$ to $30^{\circ}2'$ N. Longitude $70^{\circ}47'$ to $74^{\circ}1'$ E. and bounded on the North East by the District of Ferozepur on the East and South by the Rajputana States of Bikaner and Jaisalmer on the South West by Sind and on the North West by the Indus and Sutlej rivers. Area 15 600 square miles.

This State is about 300 miles in length and about 60 miles wide is divided lengthwise into three great strips. Of these the first is a part of the Great Indian Desert, the central track is chiefly desert not capable of cultivation identical with the Bar or Patunlands of the Western Punjab and the third, a fertile alluvial tract in the river valley is called the Sind. The ruling family is descended from the Abbaside Khalifas of Baghdad. The tribe originally came from Sind and assumed independence during the dismemberment of the Durrani empire in the Treaty of Lahore in 1809. Ranjit Singh was confined to the right bank of the Sutlej.

The first treaty with Bahawalpur was negotiated in 1838, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It secured the independence of the Nawab within his own territories and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory and life pension. On his death the succession was disputed and for a time the administration of the State was in the hands of the British author-

ities. The present Nawab is Capt. H. H. Baku ud Daula, Nazrat Jang, Hafiz ul Mulk Nawab Sir Bahi Muhammad Khan Bahadur Abbas V. K.O.V. who was born in 1894 and succeeded in 1907. During his minority the State was managed by a Council of Regency which ceased to exist in March 1924 when H.H. the Nawab was invested with full power. His Highness is now assisted in the administration of his State by a Chief Minister Nawab Maula Khan Bahadur C.I.B., a Public Works and Revenue Minister Mr. J. A. C. Fitzpatrick B.A., LL.B. C.I.E. C.B.E. J.C.S. and a Home Minister Moulvi Ghulam Hussain Qureshi Hashmi.

The chief crops are wheat, rice and millet. The Lahore-Karachi branch of the North Western State Railway passes through the State. The State supports an Imperial Service combined Infantry in addition to other troops. The capital is Bahawalpur, a walled town built in 1748.

Income from all sources about 50 lakhs. Languages spoken Multani or Western Punjabi (Jatki), Sindhi and Marwari.

Agent to the Governor-General Punjab States — Lieutenant Colonel H. B. St. John, C.I.E. I.A.

Chamba—This State is enclosed on the west and north by Kashmir on the east and south by the British districts of Kangra and Gurdaspur and it is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicles have been completed.

Founded probably in the sixth century by Marut a Surajpuri Rajput who built Brahmara, the modern Barnanur Chamba was extended by Maru Varma (681) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence until the Moghal conquest of India.

Under the Moghals it became tributary to the empire but its internal administration was not interfered with and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1840. The part, west of the Lavi was at first handed over to Kashmir but subsequently the boundaries of the State were fixed as they now stand and it was declared independent of Kashmir. The present chief is H. H. Raja Ham Singh, who was born in 1801 and succeeded in 1910. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 20 years but the management of them has now been retroceded to the Chamba Durbar. The mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot the terminus of the Amritsar Pathankot branch of the North Western Railway. Chamba town on the right bank of the Lavi contains a number of interesting temples, of which that of Lakshmi Narayan, dating possibly from the tenth century is the most famous.

Fardkot—The ruling family of this sandy level tract of land belongs to the Sidhu Parar clan of the Jats and is descended from the same stock as the Phulkian houses. Their occupation of Fardkot and Kot Kapura dates from the time of Akbar though quarrels with the surrounding Sikh States and internal dissensions have greatly reduced the patrimony.

The present Ruling Prince Farzand Saadat Vishan Hazarat-i Kaleari Yino Bar Bara Raja Har Indar Singh Bahadur was born in 1915 and succeeded his father in 1919. Under the orders of the Government of India the administration of the State has been entrusted to a Council of Administration consisting of a President Sardar Bahadur Sarfar Indar Singh B.A. and four members. The State has an area of 843 square miles with a population of 150,891 and has an annual income of 18 lakhs. The Ruler is entitled to a salute of 11 guns and a visit and return visit from the Viceroy. The State Forces consist of State Sappers and Household Troops (Cavalry and Infantry).

Jind—Jind is one of the three Phulkian States (the other two being Patiala and Nabha). Its area is 1,268 square miles with a population of 408,183 souls and an income of 5 lakhs.

The history of Jind as a separate State dates from 1783 when Raja Gajpat Singh, the maternal grandfather of Maharaja Ranjit Singh and great grandson of the famous Phul established his principality. He was succeeded by Raja Bhag Singh who greatly assisted Lord Lake in 1803. His grandson Raja Sangat Singh was succeeded by the nearest male collateral Raja Sarup Singh in 1897. In the crisis of 1861 Raja Sarup Singh rendered valuable services to the British and was rewarded with a grant of nearly 600 square

miles of land known as Dadri territory. He was succeeded by his son Maharaja Raghib Singh who gave help to the British Government on the occasion of Kuka outbreak (18 2) and the 2nd Afghan War (18 8). The present ruler Maharaja Ranbir Singh was born in 1879 succeeded in 1897 and invested with full powers in 1899. The State rendered exemplary services in the Great European War. It supplied 663 men to the Indian Army and Imperial Service Troops and doubled the strength of its Imperial Service Infantry. The total contribution amounted to nearly 35 lakhs, in gifts of cash materials animals and loan.

His Highness enjoys a salute of 15 guns. The capital is Sangrur which is connected by a State Railway with the North Western Railway. The principal executive Officer of the State is called Chief Minister.

Ruler—Colonel His Highness Farzand-i-Dilband Rasikh-i-Itikad Daulat-i-Inglish-i-Jaja-i-Rajgun Maharaja Sir Ranbir Singh Itajendra Bahadur G.O.I.E. K.C.S.I. etc.

Kapurthala—This State consists of three detached pieces of territory in the great plain of the Jullundur Doab. The ancestors of the ruler of Kapurthala at one time had possessions both in the Cis and Trans Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu whence the family springs, and from which it takes this name of Ahluwalia. When the Jullundur Doab came under the dominion of the British Government in 1846 the estates north of the Sutlej were maintained in the independent possession of the Ahluwalia Ruler conditional on his paying a remuneration in cash for the service contingents by which he had previously contributed to Ranjit Singh which was remitted by the Government of India in perpetuity in 1914 in recognition of the splendid war record and uniformly efficient administration of the State. The Bari Doab estates are held by the head of the House as a jaghir in perpetuity the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny the present Maharaja's grandfather was rewarded with a grant of other estates in Oudh which yield a very large annual income. The present Ruler is H. H. Maharaja Sir Jagatjit Singh Bahadur G.O.S.I. G.C.I.E. who was born in 1872 and succeeded in 1897. He was granted the title of Maharaja as an hereditary distinction in 1911. His salute was raised to 16 guns and he was made an Honorary Colonel of the 40th Sikhs. The Maharaja was recently decorated by the King of Egypt with the Grand Cordon of the Nile and the French Government has conferred on him the high distinction of Grand Officer of Legion d'Honneur. The rulers of Kapurthala are Sikhs and claim descent from Hans Kapur a member of the Rajput House of Jalsamer. Only a small proportion of the population however are Sikhs the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Sultanpur in this State is famous for hand painted cloths. The main line of the North Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the State. The

Imperial Service and local Troops of the State have been re-organised and are now designated as Kapurthala State Forces. The State Troops, the strength of which was raised during the Great War served the Empire in that crisis in East Africa, Mesopotamia and on the Afghan Frontier. Primary education is free throughout the State which spends a large proportion of its revenues on the education department. The State also possesses a Legislative Assembly which was created by the present Maharaja on the occasion of the Silver Jubilee of his reign in 1916. The capital is Kapurthala which has been embellished by the present Maharaja with a Palace of remarkable beauty and grandeur and with various buildings of public utility. The town boasts modern amenities such as electric light, water works etc.

Political Officer. The Agent to the Governor General, Punjab States, Lahore.

Malér Kotla—This State consists of a level sandy plain unbroken by a hill or stream bounded by the district of Ludhiana on the north, by Patiala territory on the east and south and by the Ludhiana District Patiala and Nabha territories on the west. The Rulers (Nawabs) of Malér Kotla are of Kurd descent who came originally from the Province of Sherwan and settled in the town of Sherwan north of Persia and after settling for a time in Afghanistan near Ghazni came to India and settled at Malér the old capital of the State in 1432. Originally they held positions of trust under the Lodhi and Moghal Emperors. As the Moghal Empire began to sink into decay they gradually became independent. They were in constant feuds with the newly created adjacent Sikh States. After the victory of Laswari, gained by the British over Shindha in 1803 and the subjugation and flight of Holkar in 1805, when the Nawab of Malér Kotla joined the British Army the British Government succeeded to the power of the Mahrattas in the districts between the Sutlej and the Jumna. The State entered into political relations with the British Government in 1809. The present Ruler is Lt-Col. His Highness Nawab Sir Ahmad Ali Khan, Bahadur KCSI KCIE who was born in 1881 and succeeded in 1908. He was created Hon' Major in the Indian Army in June 1916 and promoted to the rank of Lt-Col in December 1919.

The chief products are cotton, sugar, poppy and seed, mustard, ajwan, methi, tobacco, garlic, onions and all sorts of grains.

The State maintains Sepoys, Infantry Cavalry and Artillery. The capital is Malér Kotla. The population of the town is 80,000 souls. Annual revenue of the State is about 15 lakhs.

Mandi is an Indian State in the Punjab Political Agency lying in the upper reaches of Bias river which drains nearly all its area. Its area is 1,200 square miles and it lies between 31°-23' North Lat and 76°-22' East Long and is bounded on the east by Kulu, on the south by Suket and on the north and west by Kangra. It has an interesting history of considerable length which finally resulted in its entering into a treaty with the British in 1896 A.D.

The present Ruler, Lieutenant His Highness Raja Joginder Sen Bahadur assumed full powers in February 1925. His Highness was married to the only daughter of His Highness the Maharaja of Kapurthala in February 1923 and was blessed with the birth of an heir apparent in December 1923.

The Chief Executive Officer of the State is Captain Sardar Dina Nath, Bar at-Law who has been designated as His Highness Chief Secretary. Construction work of the Kangra Valley Railway is in full swing. It is expected that the line will be open to traffic in April 1928. The Railway line will prove of considerable importance in linking Mandi with the Punjab and will materially develop its trade. The work of the Mandi Hydro-Electric Project is also in progress. This project when finished will supply electric power to practically the whole of the Punjab and will materially help in developing local industries.

The principal crops are rice, maize, wheat and millet. About three-fifths of the State are occupied by forests and grazing lands. It is rich in minerals. The capital is Mandi founded in 1527 which contains several temples and places of interest and is one of the chief marts for commerce with Ladakh and Yarkand.

Nabha—Nabha which became a separate State in 1763 is one of the 3 Phulkian States—Nabha, Patiala and Jind and though second in point of population and revenue of the 3 sister States it claims seniority being descended from the eldest branch. It consists of two distinct parts, the main portion comprising 12 separate pieces of territory scattered among the other Punjab States and Districts, forms the City of Nabha and the *Azamats* of Phul and Amloh, the second portion forms the *Azammat* of Bawal in the extreme south-east of the Punjab on the border of Rajputana. This *Azammat* of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3 lakhs. The State supports one battalion of Imperial Service Infantry consisting of about 500 men. For the preservation of the peace there is a Police force consisting of about 600 men.

The State is traversed by the main and 3 branch lines of the N.W. Railway and the B.B. & C.I. crosses the *Azammat* of Bawal. A portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley, to facilitate trade the Durbar has opened grain markets and Banks near the principal railway station within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lace and pots etc. There are some spinning factories and a cotton steam press in the State which are working successfully. In 1923 an inquiry was held into certain matters in dispute between the Patiala and the Nabha Durbars which showed that the Nabha Police had fabricated cases against persons connected with the Patiala State with the object of injuring them through the Patiala Durbar. The Maharaja of

Nabha who was born in 1888 and succeeded his father in 1911 entered into an agreement with the Government of India whereby he voluntarily separated himself from the administration retaining his salute and titles and the control of the State was accordingly assumed by the Government of India.

Patiala—This is the largest of the Phul Khan States, and the premier State in the Punjab. Its territory is scattered and interspersed with small States and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jajpur and Alwar States. Area 5,932 square miles. Population 1,499,788. Gross income Rs. one crore and thirty five lakhs. Its history as a separate State begins in 1762. The present Ruler, Major General His Highness Farzand I Khas Daulat Indishia Mansur-ul-Zaman Amir ul-Umra, Maharaja Dhiraj Rajeshwar Sri Maharaja Rajan Sir Bhupindra Singh Mohinder Bahadur G.C.B., G.C.I.E., G.C.V.O., G.B.A., A.D.C. was born in 1891, and succeeded in 1900 and assumed the reins of government in 1909 on attaining majority. His Highness the Maharaja Dhiraj enjoys at present personal salute of 19 guns and he and his successors the distinction of exemption from presenting Nisar to the Viceroy in Durbar in perpetuity. The principal crops are grain, barley, wheat, sugar-cane, rapeseed, cotton and tobacco. A great part of the State is irrigated by the Sirhind and Western Jumna Canal distributaries. It possesses valuable forests. The State is rich in antiquities especially at Pinjaur, Sunam, Sirhind, Bhafinda, Narman, etc. It has a Railway line of its own known as Rajpura Bhafinda Railway of 108 miles in length. Besides this the State has undertaken the construction of a broad gauge line about 40 miles in length to connect Sirhind and Ruper. This new line will be opened for traffic early in 1926. The North Western Railway the E. I. Railway, the B. R. & C. I. Railway and the J. B. Railway traverse the State. His Highness maintains a contingent of two regiments of cavalry and four battalions of infantry—one battery of Horse Artillery.

The State maintains a first grade college which imparts free education to all students. Primary education is also free throughout the State. The Durbar has recently sanctioned a scheme of compulsory education.

Since the State has entered into alliance with the British Government in 1809 it has rendered help to the British Government on all critical occasions such as Gurkha War, Sikh War, Mutiny of 1857, Afghan War of 1878-79, Tirah and N. W. F. campaign of 1897.

On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on

various fronts in Egypt, Gallipoli, Mesopotamia and Palestine winning numerous distinctions. Two mule and one camel corps were raised and placed at the service of the British Government for the period of the War and in addition to furnishing nearly 25,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent at full strength contributed substantially in money and material.

His Highness was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June 1918 and during his stay in Europe His Highness paid visits to all the different and principal fronts in Belgium, France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments:—(a) Grand Cordón of the Order de Leopold, (b) Grand Cross of the Legion of Honour, France, and (c) Grand Cross of the Order of the Crown of Italy and (d) Grand Cordón of the Order of the Nile, (e) Grand Cross of the Order of the Crown of Roumania, (f) Grand Cross of the Order of St. Saviour of Greece (1926).

Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the frontier on the Staff of the General Officer Commanding and the Imperial Service Contingent was on active service towards Kohat and Quetta fronts. For his services on the N. W. Frontier His Highness was mentioned in despatches. He was Elected Chancellor of the Chamber of Princes (Narendra Mandal) in 1925 and 1926 and represented Indian Princes at the League of Nations at Geneva in 1925.

Sirmur (Nahan)—This is a hilly State in the Himalayas under the Political control of the Agent to the Governor-General Punjab States, Lahore. Its history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British and during the second Afghan War he sent a contingent to the North West Frontier. The present Chief is Lieut.-Colonel H. H. Maharaja Sir Amar Prakash Bahadur K.C.B., K.C.I.E., who was born in 1898 and succeeded in 1911. The main agricultural feature of the State is the recent development of the Kiarla Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugar cane crushing mills. The State supports a Corps of Sappers and Miners which served in the Great War. It was captured with General Townshend's force at Kut-al-Amara but the Corps was reconstituted and sent to service.

UNDER THE GOVERNMENT OF BURMA.

The States under this Government comprise the Shan States which are included in British India though they do not form part of Burma proper and are not comprised in the regularly

administered area of the Province and the Karen States which are not part of British India and are not subject to any of the laws in force in the Shan States or other parts of Burma.

The Shan States comprise the two isolated States of Hsawngshup and Singaling Hkamti in the Upper Chindwin District under the super vision of the Commissioner Saping Division, the eight petty village communities under separate hereditary Chiefs known as Hkamti Long in the Myittha District and the two main divisions of the Shan States known as the Northern and Southern Shan States numbering six and thirty four States respectively which are under the Commissioner Federated Shan States.

Hsawngshup with an area of 529 square miles and a population of 7 048 lies between the 24 and 25 parallels of latitude and on the 95 parallel of longitude between the Chindwin river and the State of Manipur.

Singaling Hkamti has an area of 988 square miles and a population of 2,287 and lies on the 26th and 26th parallels of latitude and longitude respectively.

The Hkamti Long States have an area of 200 square miles with a population of 8 500 and lie between the 27th and 28th parallels of latitude on the Upper Waters of the N. M. branch of the Irrawaddy.

The Northern Shan States (area 20,108 square miles and population 592,913) and the Southern Shan States (area 38 157 square miles and population 847,418) form with the unadministered Wa States (area about 2 000 square miles) and the Karenli States a huge triangle lying roughly between the 19th and 24th parallels of latitude and the 96th and 102nd parallels of longitude with its base on the plains of Burma and its apex on the Mekong river.

The population consists chiefly of Shans who belong to the Shan group of the Tai Chinese family the remainder being chiefly to the Wa, Palaung and Mon Khmer groups of races of the Austro-Asiatic branch of the Austro family or to the Karen family which Sir George Grierson now proposes to separate from the Tai Chinese family. There are also a number of Kachins and others of the Tibeto-Burman family. The Shans themselves shade off imperceptibly into a markedly Chinese race on the frontier. Buddhism and Animism are the principal religions.

The climate over so large an area varies greatly. In the narrow lowlying valleys the heat in summer is excessive. Elsewhere the summer shade temperature is usually 80 to 95 Fahr. In winter frost is severe on the paddy plains and open downs but the temperature on the hills is more equable. The rainfall varies from 50 to 100 inches in different localities.

The agricultural products of the States are rice, pulses, maize, buckwheat, cotton, sesam, gum, groundnuts, oranges and pineapples.

Land is held chiefly on communal tenure but unoccupied land is easily obtainable on lease from the Chiefs in accordance with special rules from non natives of the States. Great spaces of the States are suitable for cattle, pony and mule breeding and in the Northern States Chinese settlers appear to have found the latter a very paying proposition.

The mineral resources of the States are still unexplored. The Burma Corporation have a concession for silver and lead in the Northern States which they claim to be the richest in the world. The Mawson area in the Southern States is also rich in lead. Lignite and iron ore of a low grade are found in many places.

Lashio the headquarters of the Northern Shan States District is the terminus of the Myobung Lashio Branch of the Burma Railway (178 miles) and is also connected with Mandalay by a cart road.

The Burma Corporation's narrow gauge private railway track 46 miles long connects their Bawdwin mine with the Burma Railways system at Nanyaw.

The Southern Shan States are served by the Burma Railway branch line Thazi to Hmho (57 miles) which it is proposed to extend shortly to Tayaw in the Yawngwe plain.

Taunggyi the headquarters of the Southern Shan States is connected with Hmho by a well graded motor road. The States vary much in size and importance. The largest State is Kungtung with an area of 12 400 square miles and population 203 761. The smallest State is Namtok with an area of 14 square miles and population 830.

Hsipaw with an area of 4 400 square miles and population 101 410 is the richest State with a gross revenue of Rs. 8 30 000.

The Sawbwas of Kungtung Hsipaw and Yawngwe and Mongnai have salutes of nine guns while the Tawngpeng Sawbwa has a personal salute of the same number.

Administration

Under the Burma Laws Act 1898 the Civil Criminal and Revenue administration of every Shan State is vested in the Chief of the State subject to the restrictions specified in the sanad of appointment granted to him and under the same Act the law to be administered in each State is the customary law of the State so far as it is in accordance with justice, equity and good conscience and not opposed to the law in force in the rest of British India. The customary law may be modified by the Governor who has also power to appoint officers to take part in the administration of any State and to regulate the powers and proceedings of such officers. The Chiefs are bound by their sanads to follow the advice of the Superintendents appointed but subject to certain modifications which have been made in the customary law relating to criminal and civil justice have more or less maintained the semi independent status which was found existing at the annexation of Upper Burma.

In 1920, Sir Reginald Craddock, Lieutenant-Governor of Burma, proposed a scheme for the sanction of the Secretary of State under which the Chiefs of the Northern and Southern Shan States have agreed to federalise the departments of Government in which they had been previously largely dependent on contributions from the Provincial Funds. Under this scheme no interference is contemplated in the internal management of the States and the Chiefs continue to collect their taxes and be responsible for law and order, maintain Opium for the

disposal of criminal and civil cases appoint their own officials and control their own subjects under the advice of the Superintendent. But the Federation is responsible for the centralised Departments of Public Works, Medical, Forests, Education, Agriculture and to a small extent Police. In place of the individual tribute formerly paid by them the Chiefs contribute to the Federation a proportion of their revenue which amounts roughly to the expenditure hitherto incurred by them on the heads of administration now centralised while the Provincial Government surrenders to the Federation all provincial revenue previously derived from the States and makes an annual contribution to enable it to maintain its services at the same degree of efficiency formerly enjoyed. The Federation on the other hand pays a fixed proportion of its revenue to the Provincial Treasury as tribute in place of the individual contributions of the Chiefs. Under this scheme the Federation is a sub-entity of the Burma Government itself contained and responsible for its own progress. The Chiefs express their views on Federal and general matters through a Council of Chiefs consisting of all Chiefs of the rank of Sawbwa and four elected representatives of the lesser Chiefs. The Superintendents, Northern Shan States and the Commissioner of the Federated Shan States to whom the supervision of the Federation has been entrusted are ex-officio members of the Council. The scheme was sanctioned and brought into force with effect from October 1922. The first meeting of the Council of Chiefs was formally opened by His

Excellency the Governor Sir Spencer Harcourt Butler G.C.I.E., K.O.B.I. L.O.B. in March 1923.

Karenni

This district which formerly consisted of five States now consists of three as two have been amalgamated with others. It has a total area of 3,550 square miles and a population of 48,780. It lies on the south of the Southern Shan States between Shan and the British district of Toungoo. The largest State is Kantarawadi with an area of 3,000 square miles and a population of 38,621 and a revenue of nearly 1½ lakhs of rupees. More than half of the inhabitants are Red Karens. An Assistant Political Officer is posted at Lolkaw subject to the supervision of the Superintendent. Southern Shan States who exercise in practice much the same control over the Chiefs as is exercised in the Shan States though nominally they are more independent than their Shan neighbours. Mineral and forest rights however in Karenni belong to the Chiefs and not to the Government. In the past substantial contributions from Provincial revenues have been made to the Karenni Chief for education and medical service. The Chiefs are at present unwilling to surrender their special right and join the Shan States Federation though very considerable advantages might accrue from their doing so.

The principal wealth of the country used to be in its teak timber and a large alien population was at one time supported by the timber trade. This has largely declined in the last few years and unless the Chiefs are prepared to deny themselves and close their forests they will soon disappear.

UNDER THE GOVERNMENT OF ASSAM

Manipur—The only State of importance under the Government of Assam is Manipur which has an area of 3,456 square miles and a population of 8,64,018 (1921 Census) of whom about 60 percent are Hindus and 34 percent animistic hill tribes. Manipur consists of a great tract of mountainous country and a valley about 50 miles long and 20 miles wide which is shut in on every side. The State adopted Hinduism in the early eighteenth century. In the reign of Pamheiba or Garib Nawaz who subsequently made several invasions into Burma. On the Burmese retreating Manipur negotiated a treaty of alliance with the British in 1762. The Burmese again invaded Manipur during the first Burmese war and on the conclusion of peace in 1826 Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja followed by the treacherous murder of the Chief Commissioner Mr. Quinton and the officers with him and the withdrawal of the escort which accompanied him. From 1891 to 1907 the State was administered by the Political Agent, during the minority of H. H. Chura Chand Singh. The Raja was invested with ruling powers in 1907 and formally installed on the gadi in 1908. For his services during the War the hereditary title of Maharaja was

conferred on him. He is entitled to a salute of 11 guns.

The administration of the State is now conducted by H. H. the Maharaja assisted by a Durbar which consists of a President who is a member of the Indian Civil Service, his services being lent to the State by the Assam Government, three ordinary and three additional members who are all Manipuris. The staple crop of the country is rice. Forests of various kinds cover the great part of the mountain ranges.

Khasi and Jaintia Hills—These petty chiefships 2½ in number with a total area of about 3,900 square miles and a population of 1,56,000 are included under the Government of Assam. Most of the States have treaties or engagements with the British Government. The largest of them is Khyrim, the smallest is Nongdwa which has a population of only 246. Most of them are ruled by a Chief or Siem. The Siemship usually remains in one family. The succession was originally controlled by a small electoral body constituted from the heads of certain clans but in recent years there has been a tendency to broaden the elective basis. The constitution of a Khasi State has always been of a very democratic character, a Siem exercising but little control over his people.

UNDER THE GOVERNMENT OF THE CENTRAL PROVINCES

The Central Provinces include fifteen feudatory States subordinate to the Government with an area of 31 0·2 square miles and a population of 2,067,292. One of the States, Makra, lies within Hoshangabad District, the remainder are situated in the Chhattisgarh Division to the different districts of which they were formerly attached. Their relations with Government are controlled by a Political Agent. The States vary greatly in size and importance. Sakti, the smallest, having an area of 188 square miles and Bastar the largest, an area of 13,062 square miles. They are administered by hereditary chiefs, who hold on conditions of loyalty and good government set forth in patents and acknowledgments of fealty, but are nominally free from direct interference save in the case of sentences of death which require His Excellency the Governor's confirmation. But as a fact the Government has exercised a very large amount of control owing mainly to the frequency with which the States have been taken under direct management because of either the minority or the misconduct of the chief.

The States pay a tribute to Government which amounts in the aggregate to about 2½ lakhs.

Statistics relating to the chief States are contained in the following table—

State	Area	Population 1921	Revenue (approximate) in Lakhs
	Sq Miles		Rs
Bastar	13,062	464,127	8
Jaipur	1,903	154,156	3
Kanker	1,420	124,928	4
Khairagarh	981	124,008	5
Nandgaon	871	147,919	8
Rajgarh	1,486	241,634	0
Surguja	6,055	378,226	6
Right other States	5,284	432,284	13
Total	31,072	2,067,292	53

Bastar—This State which lies to the south-east corner of the Provinces is the most important of the group. It has an area of 13,062 square miles and a population of 464,127. The family of the Raja is very ancient, and is stated to belong to the Rajputs of the Lunar race. Up to the time of the Marathas Bastar occupied an almost independent position, but a tribute was imposed on it by the Nagpur Government in the eighteenth century. At

this period the constant feuds between Bastar and the neighbouring State of Jeypore in Madras kept the country for many years in a state of anarchy. The chief object of contention was the Kotpad tract which had originally belonged to Bastar but had been ceded in return for assistance given by Jeypore to one of the Bastar chiefs during some family dissensions. The Central Provinces Administration finally made this over to Jeypore in 1863 on condition of payment of tribute of Rs. 3,000 two-thirds of which sum was remitted from the amount payable by Bastar. By virtue of this arrangement the tribute of Bastar was until recently reduced to a nominal amount. The cultivation of the State is extremely sparse. Rice is the most important crop. The State is under Government management. The Administrator of the State (Mr. W. V. Grignon) is an Officer of the Indian Civil Service on deputation who has two Assistants under him. After a recent period of disturbance the State has returned to complete tranquillity and precautions are being taken to remove all causes of unrest by better supervision over the minor State officials and a very considerate forest policy. The chief town is Jagdalpur on the Indravati River. The famous falls on the Indravati called the Chitrakote are 23 miles away from Jagdalpur.

Surguja—Until 1905 this was included in Chota Nagpur State of Bengal. The most important feature is the Manipat a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure but according to a local tradition in Palamanu the present ruling family is said to be descended from a Rakshas Raja of Palamanu. In 1738 a Maratha army overran the State and compelled its Chief to acknowledge himself a tributary of the Bhonsla Raja. At the end of the eighteenth century in consequence of the Chief having aided a rebellion in Palamanu against the British an expedition entered Surguja and though order was temporarily restored disputes again broke out between the Chief and his relations necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness but in that year it was ceded to the British Government under the provisional agreement concluded with Madhooji Bhonsla of Berar and order was soon established. The principal crops are rice and other cereals. The present Chief of the State is Maharaja Ramannuj Saran Singh Deo, C.B.E., who succeeded to the post in 1918 and enjoys full powers of a Ruling Chief.

JAMMU AND KASHMIR STATE

The territory known generally as the Jammu and Kashmir State lies between 32° and 37° N and 73 and 80° E. It is an almost entirely mountainous region with a strip of level land along the Punjab Border and its mountainous valleys and lakes comprise some of the grandest scenery in the world. The State may be divided physically into three areas—the upper, comprising the area drained by the Ravi Indus and its tributaries; the middle drained by the Jhelum and Kishtanganga Rivers and the lower

area, consisting of the level strip along the southern border and its adjacent ranges of hills. The dividing lines between the three areas are the snow bound inner and outer Himalayan ranges known as the Zojila and the Panchal. The area of the State is 24,258 square miles. Beginning in the south where the great plain of the Punjab ends, it extends northwards to the high Karakoram mountains where three Empires Meet.

Briefly described the State comprises the valleys of the three great rivers of Northern India, viz. the upper reaches of the Chenab and the Jhelum and the middle reaches of the Indus. The total population is 3,220,514 souls.

HISTORY—Various historians and poets have left more or less trustworthy records of the history of the Valley of Kashmir and the adjacent regions. In 1586 it was annexed to the Moghul Empire by Akbar. Srinagar, the Capital, originally known as Pravarapura had by then been long established though many of the fine buildings said to have been erected by early Hindu rulers had been destroyed by the Mahomedans who first penetrated into the Valley in the fourteenth century. In the reign of Sikandar who was a contemporary of Tamerlane a large number of Hindus was converted to Islam. Jhelum did much to beautify the Valley but after Aurangzeb there was a period of disorder and decay and by the middle of the eighteenth century the Nizam or Governor of Kashmir had become practically independent of Delhi. Thenceforward the country experienced the oppression of Afghan rule until it was rescued in 1819 by an army sent by Maharaja Ranjit Singh. The Sikh rule was less oppressive than that of the Afghans. The early history of the State as at present constituted is that of Maharaja Shri Gulab Singhji, a son of the old Ruling Family of Jammu, who rose to eminence in the service of Maharaja Ranjit Singh of Lahore and was in recognition of his distinguished services made Raja of Jammu in 1820. He held aloof from the war between the British and the Sikhs only appearing as mediator after the battle of Sobraon (1846) when the British made over to him the valley of Kashmir and certain other areas in return for seventy-five lakhs of rupees. His son His Highness Maharaja Ranbir Singhji, G.C.S.I., G.C.I.E. a model Hindu and one of the staunchest allies of the British Government ruled from 1857 to 1886. He did much to consolidate his possessions and evolve order in the frontier districts. He was succeeded by his eldest son His Highness Maharaja Sir Pratap Singhji, G.C.S.I., G.C.I.E. who died on 23rd December 1920 and was succeeded by His Highness the present Maharaja Shri Harisinghji Bahadur.

The most notable reform effected in the State during the reign of the late Maharaja was the Land Revenue Settlement originally carried out under Lawrence and revised from time to time.

ADMINISTRATION—For some years after the accession to the throne of the late Maharaja the administration of the State was conducted by a Council over which the Maharaja presided. In 1901, this Council was abolished and the administration of the State was thenceforward carried on by His Highness the Maharaja with the help of a Chief Minister and a number of Ministers in charge of different portfolios. This system continued until the 24th January 1922 when an Executive Council was inaugurated. Very recently certain modifications have been introduced in the Constitution as a result of which the contact of His Highness with the administration of the State has become more direct and intimate.

The British Resident has his headquarters at Srinagar and Skitot and there is also a Political Agent at Gilgit. A British Officer is stationed at Leh to assist in the supervision of the Central Asian Trade with India which passes through Kashmir.

In the Dogras the State has splendid material for the Army which consists of 7,700 troops. Besides this thousands of Dogra serve in the Indian Army.

FINANCE—The financial position of the State is strong. The total revenue is about Rs. 2,25,00,000. The chief sources being land forests, customs and excise and agriculture. There is a big reserve and no debt.

INDUSTRY AND AGRICULTURE—The population is pre-eminently agricultural and pastoral. The principal food crops are rice, maize and wheat. Oil seed is also an important crop. Barley, cotton, saffron, tobacco, beans, walnuts, almonds and hops are also grown. Pears and apples the principal fruits of the Valley are exported in large quantities. The State forests are extensive and valuable. The principal species of timber trees are cedar, blue pine and fir. The most valuable forests occur in Kishtwar, Karnah and Kamraj Nagas. A survey of the mineral resources of the State is being conducted under an expert. The most noteworthy of the minerals are bauxite, coal, fuller's earth, kaolin, slate, zinc, copper and talc. Gold is found in Baltistan and Chit. Sapphires in Paddar, aquamarines in Skardu and lead in Uri. The silk culture in Srinagar is the largest of its kind in the world. Manufacture of silk is a very ancient industry in Kashmir. Zain ul-Abidin who ruled from 721 to 742 is said to have imported silk weavers from Khurasan and settled them here. Wool, a cloth, shawl, paper, much and wood carving of the State are world famous. The State participated in the British Empire Exhibition of 1923. The Kashmir Court was styled The Court of The Smaller Courts and attracted many visitors.

COMMUNICATIONS—Great effort has been made and are being made towards the improvement of roads for wheeled traffic in the State. The Jhelum Valley Road (106 miles) which links the Kashmir Valley with the Punjab and the North Western Frontier Province is considered to be one of the finest motorable mountain roads in the world.

The Baidhat Cart Road 200 miles long which has recently been completed joins Kashmir with the North Western Railway system at Jammu Tawal and is also a fine motorable road.

Bovis for pack animals lead from Srinagar the summer capital of Kashmir to the frontier districts of Gilgit and Ladakh. Internal village communications have also been much improved.

The Jammu and Kashmir Railway, a section of the Western Railway from the line of the North Western Railway system is the only Railway in the State. The mountainous nature of the country has made the extension of the line into the heart of the State so far impracticable.

UBLIC WORKS—In 1904 a flood spill channel above Srinagar was constructed to minimize the constant danger of floods in the River Jhelum and it was hoped that the danger would be still further reduced by the carrying out of a scheme for lowering a part of the bed of the River Jhelum by dredging which has been taken in hand. It is interesting to know that dredging operations were once before carried out in the

reign of Avantivarman (A.D. 855-883) by his engineer Guyya near Bopore with the same object. Good progress has been made with irrigation but the most important scheme of recent years has been the installation of a large Electric Power Station on the Jhelum River at Mahora which was completed in 1907.

EDUCATION—Of the total population of 8,259,527 excluding the frontier Ilakas where

literacy is not recorded there are 72,233 persons who are able to read and write of whom 4,007 only are females. In other words 25 out of every 1,000 persons aged five or more can read and write. Among males 46 in every 1,000 are literate. The number of educational institutions including two Arts Colleges and two technical institutes is 754 and is being steadily increased.

THE CHAMBER OF PRINCES.

The Report on Indian constitutional reforms by Mr. Montagu and Lord Chelmsford stated that it was desired to call into existence a permanent consultative body which would replace the conference of Princes which had periodically met at the invitation of the Viceroy. After pointing out the need for regular meetings of the Council the Report said:—“We contemplate that the Viceroy should be **President** and should as a rule preside but that in his absence one of the Princes should be chairman. The rules of business would be framed by the Viceroy after consultation with the Princes who might from time to time suggest modifications in the rules.”

It was further suggested in the joint report that the Council of Princes should be invited annually to appoint a small **standing committee** to which the Viceroy or the Political Department might refer decisions affecting the Native States, particularly questions dealing with custom or usage. The Joint Report also made recommendations for the appointment of commissions to inquire into disputes in which Native States might be concerned and into cases of misconduct and for arranging for joint deliberation on matters of common interest between the Council of State and the Council of Princes.

At the end of January 1919 a Conference of the Ruling Princes was held at Delhi to consider this scheme. The subject which gave rise to the longest discussion was the proposal in the Reform Scheme to divide the Native States into two categories those possessing ‘full powers’ of internal Government and those not having such powers. Some of the Princes held that membership of the Council of Princes should be limited to the rulers enjoying full powers whilst others considered that some measure of representation ought to be given to the smaller States and the Conference came to no agreement on the matter. The proposal to institute a Council of Princes received however general support and it was suggested that the new House should be called the **Narendra Mandal** (House of Princes).

The recommendations of the Conference were then placed before the Secretary of State and in the next Conference held in November 1919 Lord Chelmsford propounded a general scheme for a Chamber of Princes approved by His Majesty's Government. The Conference after debating the question passed a resolution warmly accepting the scheme and expressing an earnest hope that the Chamber might be brought into existence during the ensuing year. On the occasion of the **formal inauguration** of the Chamber of Princes Lord Chelmsford describing how he enlisted the advice and criticism of the Codification Committee of Princes which had been appointed by the Conference and how

with their assistance the drafts of the Constitution of the Chamber with the first Regulations and Rules of Business and the draft resolution concerning Courts of Arbitration and Commissions of Enquiry were moulded into practical shape explained that difficulties had arisen in the selection of a suitable Indian designation for the Chamber which would for the present be known by the English title of the Chamber of Princes. He also said that another point on which the published constitution differed from the wording favoured by the Committee of Princes was the absolute prohibition of the discussion in the Chamber of the internal affairs of individual States and the actions of individual Rulers. The main function of the Chamber was to discuss matters affecting the States generally or of common concern to the States and to British India or the Empire at large. As regards the question of direct relations between the Government of India and the important States a recommendation had been made to the Secretary of State for the transfer of the more important States in the Bombay Presidency according to a scheme prepared by a special Committee to be carried into effect at some future date when the conditions appear to be favourable. A scheme would also shortly be placed before His Majesty's Government for the bringing of the important States of the Punjab into direct relations with the Government of India as soon as the necessary arrangements could be made. Gwalior State would soon be brought into direct touch with the Central Government through a Resident who would be independent of the Central India Agency and some of the Rajputana States which were formerly in relations with a Local Resident were now in direct relations with the Agent to the Governor General in Rajputana.

The Chamber was formally inaugurated by the Duke of Connaught on February 8th 1921 and has quickly developed a vigorous life. Its Presidential duties are entrusted to an elected Chancellor now H. H. the Maharajah of Bikaner and its detailed business is attended to by an elected Standing Committee of six members. This meets twice or thrice a year at the headquarters of the Government of India and one of its most important functions is to discuss with the various Departments of that Government matters in which the Administrations of both the States and British India are concerned. Important questions of this class which have recently received attention are the division of revenue from Customs and Posts and Telegraphs and the control of the Police on railway lines running for considerable distances through State territory. The Committee reports to the Chamber which meets annually. The number of Princes who attended the last meeting was between forty and fifty. Its proceedings have hitherto always been conducted in private.

Indian States' Tribute.

Many of the States pay tribute varying in amount according to the circumstances of each case, to the British Government. This tribute is frequently due to exchanges of territory or settlement of claims between the Governments but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Indian States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated and it would serve no useful purpose to enter upon the question. It may however be mentioned that a large number of the States of Kathiawar and Gujarat pay tribute of some kind to Baroda and that Gwalior claims tribute from some of the smaller States of Central India —

States paying tribute directly to the Government of India

	£
Tribute from Jaipur	26,687
" Kotah	15,648
" Udaipur	13,333
" Jodhpur	6,583
" Bundi	8,000
Other States	15,170
Contribution of Jodhpur towards cost of Kripapura Irregular Force	7,667
" of Kotah towards cost of Deohi Irregular Force	13,333
" of Bhopal towards cost of Bhopal Levy	10,753
of Jaora towards cost of United Malwa Contingent	9,142
Contributions towards cost of Malwa Hill Corps	2,230
<i>Central Provinces and Berar</i>	
Tribute from various States	15,696
<i>Burma</i>	
Tributes from Shan States	28,524
Other States	1,397
<i>Assam</i>	
Tribute from Manipur	332
" " Barakul	7
<i>Benegal</i>	
Tribute from Cooch Behar	4,514
<i>United Provinces</i>	
Tribute from Benares	14,000
" Kupurthala (Bahraich)	5,735
<i>Punjab</i>	
Tribute from Mandi	6,667
Other States	8,036
<i>Madræs</i>	
Tribute from Travancore	58,333
Peshkash and subsidy from Mysore	233,333
Cochin	18,333
Travancore	888
<i>Bombay</i>	
Tribute from Kathiawar	81,129
various petty States	2,325
Contribution from Baroda States	25,000
Jagirdars, Southern Mahratta Country	5,785
Tribute from Outch	5,484

It was announced at the Coronation Durbar of 1911 that there would in future be no *Nazarama* payments on successions.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula.

The Portuguese possessions in India, all of which are situated within the limits of Bombay Presidency, consist of the Province of Goa on the Arabian Sea Coast, the territory of Daman with the small territory called Pragana Nagar

Avelo on the Gujarat Coast, at the entrance to the Gulf of Cambay and the little island of Diu with two places called Gogla and Simbor on the southern extremity of the Kathiawar Peninsula. All these three territories constitute what is called the State of India.

GOA.

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea to the west and North Kanara to the south and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,801 square miles and consists of the *Velhas Conquistas* or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510 and the neighbouring municipalities of Salettie Barder and Mormugao acquired in 1543, and of the *Novas Conquistas* or New Conquests, comprising the municipalities of Perem, Sanquelim, Ponda, Quepem, Canacona, Satali and Sanguem acquired in the latter half of the 18th century. The small island of Angediva situated opposite the port of Karwar in the British district of North Kanara, forms administratively a portion of the Canacona municipality. This was acquired in 1505. The whole country is hilly, especially the eastern portion the predominating physical feature being the Western Ghats, which besides bounding the country along the north-east and south-east, jut off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest Sonanagar is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal eight, which are all navigable, are in size of some importance. Goa possesses a fine harbour formed by the promontories of Barder and Salettie. Half way between these extremities lies the *cabo* or cape which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Mormugao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river which opens into Aguada. Mormugao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines. A breakwater and port have been built there and the trade is considerable being chiefly transit trade from British territory. The international transit of Mormugao port was in 1926 about Rs. 440 lakhs.

The People.

The total population of Goa was 531,952 at the census of 1921. This gives a density of 408 persons to the square mile and the population showed an increase of 9 per cent since the

census ten years previously. In the Velhas Conquistas the majority of the population is Christian. In the Novas Conquistas Hindus are more numerous than Christians. The Moslems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans (Hardos) and low castes which do not intermarry. The Hindus who form about one-half of the total population are largely Marathas and do not differ from those of the adjacent Kanhar districts of Bombay. All classes of the people, with the exception of Europeans, use the Konkani dialect of Marathi with some admixture of Portuguese words. The official language is Portuguese which is commonly spoken in the capital and the principal towns as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a great portion of British India, and the provinces of Macao (China) and Timor (Oceania), with missions in foreign countries and Mocambique (Portuguese East Africa). Properly in the territory of the Portuguese India, there are the Dioceses of Goa (Archdiocese) and Daman besides those spread out of the territory. (The Christians of Daman and Diu are subject to a Bishop who bears the title of Bishop of Daman and Arch-bishop of Oranmore). There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country

A little over one-third of the entire territory of Goa is stated to be under cultivation. The fertility of the soil varies considerably according to quality, situation and water-supply. The Velhas Conquistas are as a rule better and more intensively cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm but the majority of holdings are of much smaller extent varying from half an acre to five or six acres. The staple produce of the country is rice of which there are two good harvests, but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice the culture of coconut palms is deemed most important, from the variety of uses to which the products

are applied. **Hilly places** and inferior soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are cultivated to an important extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. There is a great shortage of agricultural labour in the Velhas Conquistas and the cultivation of rice fields is now practically controlled by the Hindu population. In the summer months bands of artisans and field labourers from the adjoining British territory make their way into Bardez where the demand for labour is always keen. Stately forests are found in the Nova Conquistas. They cover an area of 118 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory but has not been seriously worked. Manganese also exists and was worked to an important extent a few years ago.

Commerce

In the days of its glory Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese Empire and its trade is now insignificant.

The present trade of Goa is not very large. Its imports amount to about Rs. 160 lakhs and exports to about Rs. 40 lakhs. The discrepancy is met from the money sent to Goa by the many emigrants who are to be found all over the world. Few manufacturing industries at any moment exist and most manufactured articles in use are imported. Exports chiefly consist of ornaments, betel nuts, mangoes and other fruits and raw produce.

A line of railway connects Mormugao with the Madras and Southern Mahratta Railway. Its length from Mormugao to Casto Rock above the Ghats where it joins the British system is 51 miles of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration and the bulk of the trade of Mormugao port is what it brings down from and takes to the Interior. The telegraphs in Portuguese territories are worked as a separate system from the British. The latter however had an office at Nova Goa maintained jointly by the two governments. For since 1927 the Nova Goa office has been handed over to the Portuguese Government which now maintains and works all the telegraphs in its territories.

Taxes and Tariffs

The country was in a state of chronic financial equilibrium for nearly sixty years with occasional exceptions. The last war enhanced the deficits to alarming proportions and these were met by fresh taxes and new loans. Most of the new taxes were the result of the initiative of the Governor General Jaime de Morais who is popularly known as the Governor of Taxes. Only in 1927 the country experienced the joys of a balanced budget and the public servants whose salaries had always remained in arrears are now being paid regularly. There is an estimated surplus of about a lakh and a half which has been earmarked for promoting the indus-

trial progress of the country. If municipal and national taxes be added together, the country presents a very high incidence of taxation even higher than that of British India, the average coming to about Rs. 2-8 *per capita*. There is no income tax except for government servants but there is a special tax *per cent* tax on all incomes derived in the shape of interest on loans. This tax is a powerful contributory cause to the flight of capital from Portuguese India. The chief sources of revenue are the land tax, Excise and the customs. There is a special tax on endowments which yields to the State about Rs. 60,000. The country being economically backward the taxes give very little indication of its productive capacity or of its annual wealth. The national wealth is a matter of pure conjecture for lack of statistics.

The tariff schedule is based on the three fold principle fiscal, protective and preferential. There is a limited free list on which books and paper figure prominently. The fiscal tariff ranges from 10 to 30 *per cent* according to the nature of the commodities, but the duties in several cases are specific not *ad valorem*. This causes considerable hardship to trade and especially to the poorer classes of consumers. The preferential tariff applies to goods coming from Lisbon and the Portuguese Colonies. Very recently the principle of protection has been extended to the export of canned fruits which are entitled to a bounty of 10 *per cent* on their basic price.

The Capital

Nova Goa, the present capital of Portuguese India, comprehends Panjim and Bilandar. Nova Goa is some six miles distant from the new city Panjim occupies a narrow strip of land leading up to the Cabo da cape dividing the Aguada bay from that of Mormugao and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1759 and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city with its row of public buildings and elegant private residences as seen from the water is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Primary School, the Public Library and the Government Press. Other noticeable buildings are the Cathedral and various churches, the viceregal palace, the High Court and so on. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History

Goa was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur Kingdom but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. Portugal however with its three millions of population was too small to defend itself against Spain and maintain at the same time its immense Empire in the four Continents. Albuquerque tried to consolidate Portuguese rule in India by his policy of attracting the conquered Indians and granting them civil and religious liberties. His contemporaries however could not understand his far-seeing statesmanship and after his death they undid all his work basing their dominion on conquest by the sword and military force and they laboured to consolidate it by a proselytising organisation which throws all the missionary efforts of every other European power in India into the shade. Old Goa as the ruins of the old capital are called to-day had a hundred churches many of them of magnificent proportions and in the situation which was a power in the land. The sixty years' subjection to Spain in the 17th century completed the ruin of the Portuguese Empire in the East and though the Marquis of Pombal in the 18th century tried to save it by its decadence his subordinates in far-off India either could not understand or would not carry out his orders and even his strong hand was unable to stop the decline. It was in the 19th century that the colonials began to enjoy full Portuguese citizenship and sent their representatives to the Parliament in Lisbon.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off and the Nova's Conquistas were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1862 the Ranes of Satari in the Nova's Conquistas revolted. In 1871 the native army in Goa mutinied and the King's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1896 and the Ranes joining them the trouble was again not quelled until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912 troops were again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913. There has been no outbreak after that date.

The people on the whole appear to be quite satisfied with the Portuguese connection. There is no agitation for further reforms as in British India and not a sign of disaffection against Portuguese rule. This is chiefly due to the fact that under the present regime the natives of Goa enjoy complete equality with the natives of Por-

tugal many of the sons of Goa occupying high and responsible positions in Portugal. Thus Eivlao de Brito who was Minister of Public Works towards the end of the last century was a native of Goa as was the father of Dr. Bitten court Rodrigues Minister for Foreign Affairs in General Carmona's dictatorial Government. Natives of Goa are also Dr. Almeida Aires the President of the Supreme Court in Lisbon Dr. Caetano Gonçalves Judge of the same Court and Mr. Alberto Xavier Secretary General of the Ministry of Finance.

Administration.

The Lisbon Government by Decree No. 3266, dated 27th July 1917 enacted new rules regarding the administration of Portuguese India under an Organic Charter (*Carta Organica*) in force since 1st July 1919. This Charter regarding civil and financial administration of the colony was modified by rules Nos. 1005 and 1022 dated 7th and 20th August 1920 and decrees Nos. 7006 and 7040 dated 9th and 16th October 1920. A new Organic Charter modifying in certain parts the earlier one was granted by Decree No. 1,499 of 4th October 1926 and is now in force.

The territory of Portuguese India is ruled by one Governor General residing in the Capital of the State at Panjim or Nova Goa and is divided into three districts: Goa, Daman and Diu. The last two are each under a Lieutenant Governor. The district of Goa is under the direct superintendency of the Governor General.

Subordinate to the Governor General the following Secretariats are working: Home and Political, Finance, Customs, Education, Military, Naval, Agriculture, Health and Public Works. There are also three special and autonomous Departments, which do not constitute exclusive Secretariats: one of them being the Department of Posts and Telegraphs, the second that of Survey and the third that of the Fiscal of the W. I. P. Railway.

As the principal organ of administration next to the Governor General and in collaboration with him works the Governor's Council (*Conselho do Governo*) with Legislative and advisory powers. The Council is constituted in addition to the Governor General *ex officio* President of four officials (Attorney General, the Director of Finance, the Director of Civil Administration and the Director of Public Works) five elected members (three representing *Felhas Conquistas* one the *Vintas Conquistas* and one the Districts of Daman and Diu) and five members nominated by the Governor General to represent the minorities agricultural commercial and other interests and the press.

In each province of Goa, Daman and Diu there is a District Council to supervise the Municipalities and other local institutions. The District Council of Goa is composed of the Director of Civil Administration, President of the Government Prosecutor of the Nova Goa Civil Court, the Deputy Chief Health Officer, the Engineer next to the Director of Public Works, the Deputy Director of Finance, the Chairman of the Municipal Corporation of the Islands, one member elected by the Commercial and Industrial Associations of the district, one member elected by the 60 highest tax payers of Goa, one member elected by the Associations of Land-

owners and Farmers of the District and one member advocates elected by the Legislative Council among the legally qualified

At Damam and Diu the corresponding body is composed of the local Governor, President the Government Prosecutor the Chief of the Public Works Department the Health Officer the Financial Director of the district the Chairman of the Municipal Corporation two members elected by 40 highest tax payers of the District and one member elected by the Merchant Industrialists and Farmers of the district

Under the provisions of the above quoted Decree is also officiating in the capital of Portuguese India a administrative court tribunal to take cognizance and decide all litigious administrative matters, fiscal questions and accounts. It is named Tribunal Administrativo e Contas, e de Comarcas and is composed of the Chief Justice as President four High Court judges, one superior Government officer, who must be a Bachelor of Laws nominated by the Government and a citizen who is not an official elected by the Governor General's Council When matters regarding finances and accounts

come up for decision and discussion the Director of Finances also sits on this Tribunal.

Under the presidency of the Governor-General the following bodies are also working —

Technical Council of Public Works—Its members are all engineers on permanent duty in the head office a military officer of highest rank in the army or navy the Director of Finances, the Attorney General the Chief Health Officer and a Secretary being a clerk of the Public Works Department appointed by the Director of Public Works

Council of Public Instruction—This Council presided over by the Governor General is composed of five officials the Director of Civil Administration the Director of the Medical College, the Director of the Lyceum the Director of the Normal School and the Inspector of Primary Schools and four nominated members

There is one High Court in the State of India with five Judges and one Attorney-General and Courts of Justice at Panjim, Margao, Mapuca, Bicholim, Quip-mo Damão and Municipal Courts of Justice at Mormugao (Vasco da Gama), Ponda, Diu and Nagar Aveli.

PORT OF MORMUGAO

Mormugao is situated towards the south of Aguada Bar on the left Bar on the left bank of Zuari River in Lat. 15° 25' N and Long. 73° 47' E about 225 miles south of Bombay and 61 miles south of Panjim the Capital of Portuguese India. The Port of Mormugao is the natural outlet to the sea for the whole area served by the M & S M Ry (metre-gauge) and offers the shortest route both passenger and goods traffic. The distance from Aden to Mormugao is about the same as from Aden to Bombay. The Port is provided with light-house, buoys and all necessary marks and it is easily accessible all the year round and at any hour of the day or night even without the assistance of a Pilot. Pilotage is not compulsory but when usual pilot flag is hoisted a qualified officer will board the vessel and render such assistance

Mormugao Harbour is the terminal station of the West of India Portuguese Railway which is controlled by the Madras and Southern Maharashtra Railway Company with headquarters at Madras. Goods are shipped direct from Mormugao to any Continental Ports every facility being afforded for such direct shipments. Cargo can be unloaded from or loaded direct into Railway wagons which run alongside steamers thus reducing handling. Warehouses are built on the quay and have railway sidings alongside Steamers of over 5000 tons not registrar from any Continental Ports can be discharged or loaded rapidly and in complete safety in a working day of 10 hours 600 tons from work or 800 tons bale or bag cargo can easily be loaded or discharged. The port is provided with steam cranes and all other appliances for quick loading and discharging of vessels one of the cranes being of 30 tons capacity for discharging heavy lifts. The tonnage quay dues and all other charges are very low special concessions being granted for steamers arriving from European or American Ports touching Lisbon. Fresh water can be obtained at a low cost

The Bombay Steam Navigation Company's (Shepherd) steamers between Bombay and Mangalore call at Mormugao twice a week. The British India Steam Navigation Company's steamers between Bombay and Africa call at Mormugao at least once a month. The Eldermax-Stork Line maintains a regular service from Liverpool to Mormugao calling occasionally at Lisbon. This service offers every facility for shipment from the United Kingdom to stations on the M & S M Railway under the Combined Sea and Rail Through Bills of Lading. There are several stevedoring firms the maximum rate for discharging or loading coal and general cargo being fixed by Government at 6 annas per ton deadweight. Goods for British India pass through Goa without any charge being collected by Portuguese Government. British Customs duty payable at Castle-Rock can be paid by the Railway Company and collected at destination. Goods from stations on the M & S M Ry System to Mormugao or vice-versa are rafted without transhipment, thus avoiding a second handling. Steam tug barges etc for unloading in the stream can be had at a very low charge

With a view to promoting the economical, commercial and industrial development of Mormugao a special Department under the designation of the Mormugao Improvement Trust with its head office at Vasco da Gama, 2 miles from Mormugao Harbour has been created and the Local Government have introduced various regulations granting every facility to those intending to raise buildings for residential and industrial purposes in the whole area comprising about 300 acres, near the Harbour. There are over 2,000 plots, each measuring between 1,000 and 2,000 square metres (each square yard = 0.8361 square metre) available for residential quarters granted on permanent lease on each payment of 2 annas to Rs 1-3 per square metre according to their situation in addition to an annual payment of 4 pês per square metre as lease hold rent

Within about 60 days from the date of application for a plot, the same is made over to the applicant or to the highest bidder should there be more than one applicant for one and the same plot. The plan of buildings is in all cases subject to the approval of the Chairman of the Improvement Trust such plan being required to be submitted within 60 days from the date the plot is made over to the lessee and the period within which building is to be completed is 2 years. Importation of building materials is allowed free of Custom duties. In addition to the above there is an extensive area available and reserved only for Industrial and Commercial Establishments, this area being known as Free Zone. Within this Free Zone in addition to plots, which are leased at a very low rate for building factories, bonded warehouses or for establishment of any kind of industrial or commercial concerns in accordance with rules and regulations lately issued by the local Government special concessions and privileges are granted such as—

(I) *For Establishment of Factories or Industrial Concerns*—All machinery, building materials, tools raw materials etc. required for construction, maintenance and regular working

of the Factories are permitted free of import duty, likewise export of the goods manufactured within the "Free Zone"

(II) *For Establishment of Depots of Manufactured or Unmanufactured Goods Bonded Warehouses etc., etc.*—All goods imported by the Concessionaire for the purpose of such depot are allowed to be exported to any Foreign Territory after being improved and repacked, if necessary without payment of either import or export duty.

(III) *Exemption of Government Taxes*—In addition to the above privileges, all Factories Commercial Establishments buildings etc. within the Free Zone are exempt from all Government taxes for a period of 20 years from May 1923. Applications for any of the above concessions have to be addressed to H.E. the Governor General of Portuguese India and presented at the office of the Mormugao Improvement Trust at Vasco da Gama, giving therein full particulars of the area and plot etc. required. Such applications are disposed of within as little time as possible. Full information can be obtained from the Mormugao Improvement Trust Vasco da Gama.

DAMAN.

The settlement of Damam lies at the entrance to the Gulf of Cambay about 100 miles north of Bombay. It is composed of two portions, namely, Damam proper lying on the coast and the detached pargana of Nagar Avell separated from it by a narrow strip of British territory and dissected by the B. B. & C. I. Rail way. Damam proper contains an area of 22 square miles and 26 villages and has a population (1921) of 17,560 of whom 1,480 are Christians. The number of houses is according to the same census 4,109. Nagar Avell has an area of 60 square miles and a population (1921) of 31,048 of whom only 271 are Christians. The number of houses is 6,089. The town of Damam was sacked by the Portuguese in 1531 rebuilt by the natives and retaken by the Portuguese in 1538 when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. The native Christians adopt the European costume some of the women dressing themselves after the present European fashion and others following the old style of petticoat and mantle once prevalent in Spain and Portugal.

The soil of the settlement is moist and fertile especially in Nagar Avell but despite the

case of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice wheat the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are strictly forests in Nagar Avell and about two-thirds of them consist of teak but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East Damam carried on an extensive Commerce especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military functions subordinate to the Governor General of Goa. The judicial department is administered by a judge with an establishment composed of a delegate of the Attorney General and two clerks. In Nagar Avell the greater part of the soil is the property of the Government from whom the cultivators hold their tenures direct. A tax is levied on all lands whether alienated or the property of the State. The chief sources of revenue are land tax forests excise and customs duties.

DIU

Diu is an island lying off the southern extremity of the Kathiawar Peninsula from which it is separated by a narrow channel the 12th a insubmersible swamp. It is composed of three portions namely Diu proper (Island) the 11th a of rocks on the Peninsula separated by the channel and the fortress of Sinhor about 3 miles west of the island. It has a small bay in front of which a vessel can safely ride at anchor in two fathoms of water and owing to the great advantage which its position offers for trade with Arabia and the Persian Gulf the Portuguese were fired at an early period with a desire to obtain possession

of it. This they gained first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth from north to south two miles. The area is 20 square miles. The population of the town of Diu from which the island takes its name is said to have been 50,000 in the days of its commercial prosperity. The total population of the island according to the census of 1921, is 13,844 of whom 228 were Christians.

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements, with certain dependent lodges, or *poets*. They aggregate 208 square miles and had a total population in the first January 1927 of 224,492. The first French expedition into Indian waters with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Rouen but it failed as also did several similar attempts which followed. In 1642 Cardinal Richelieu founded the first *Compagnie d'Orient* but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664 granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted without success to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its President Caron founded in 1668 the *Compagnie* or agency at Surat. But on finding that city unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch however speedily retook Trincomalee and Caron passing over to the Coromandel coast in 1672 seized St. Thome a Portuguese town adjoining Madras which had for twelve years been in the possession of Holland. He was however compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents the celebrated François Martin suddenly restored it. Rallying under him a handful of sixty Frenchmen saved out of the wreck of the settlements at Trincomalee and St. Thome he took up his abode at Pondicherry then a small village which he purchased in 1683 from the Raja of Gingee. He built fortifications and a trade began to spring up but he was unable to hold the town against the Dutch who wrested it from him in 1693 and held it until it was restored to the French by the Peace of Ryswick. In 1697 Pondicherry became in this year and has ever since remained 'the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta its site was purchased by a European Company from a native prince and what Job Charnock was to Calcutta François Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697 Martin was appointed Governor and under his able management Pondicherry became an entrepot of trade.

Chandernagar in Lower Bengal had been acquired by the French Company in 1688 by grant from the Delhi Emperor. Mahé on the Malabar Coast was obtained in 1735 under the government of M. Lenoir. Karikal on the Coromandel Coast under that of M. Dumas, in 1739. Yanam on the coast of the Northern Circars was taken possession of in 1760 and formally ceded to the French two years later.

Administration.

The military command and administration in chief of the French possessions in India are vested in a Governor whose residence is at Pondicherry. The office is at present held by Monsieur H. Bédoulet. He is assisted by a

Chief Justice and by several *Chefs de Service* in the different administrative departments. In 1879 local councils and a council-general were established the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities or Communal Boards, were erected in 1907 namely Pondicherry, Ariancoupan, Modelliarpeth, Oulgarret, Villenour, Tiroubouvane, Babour and Nétipacain, for the establishment of Pondicherry, Karikal, Néravy, Nedoumoudou, Tirumalar, Grande Aïdée, Cutchery for the establishment of Karikal and also Chandernagar, Mahé and Yanam. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry and those of administrators at Chandernagar, Yanam, Mahé and Karikal, together with other headquarters charges necessarily engross a large proportion of the revenue. All the state and dignity of an independent Government with four dependent ones have to be maintained. This is effected by rigid economy and the prestige of the French Government is worthily maintained in the East. Pondicherry is also the scene of considerable religious pomp and missionary activity. It forms the seat of an Archbishop with a body of priests for all French India and of the *Missions Étrangères*, the successors of the Mission du *Paraclet* founded by the Jesuits in 1770. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running via Villenour from Pondicherry to Villupuram on the South Indian Railway maintains communication with Madras and the rest of British India, and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons of European descent, was reorganised by a decree of 7th March 1914. The capital Pondicherry is a very handsome town and presents, especially from the sea a striking appearance of French civilisation.

People and Trade

The Settlements are represented in Parliament at Paris by one senator and one deputy. The Senator is Mons. P. Bluyssen. The Deputy is Mons. G. Angoulvant. There were in 1926 59 primary schools and 8 colleges all maintained by the Government with 300 teachers and 10,450 pupils. Local revenue and expenditure (Budget of 1927) Rs. 2,335,250. The principal crops are paddy, groundnut and ragi. There are at Pondicherry 3 cotton mills and at Chandernagar 1 jute mill. The cotton mills have in all 1,635 looms and 2,067 spindles employing 8,225 persons. There are also at work one oil factory and a few oil presses for groundnuts, one ice factory, one iron works and a cocaine factory.

The chief exports from Pondicherry are oil seeds. At the ports of Pondicherry, Karikal and Mahe in 1926 the imports amounted to Rs. 10,137,762 and the exports to Rs. 28,286,194. At these three ports in 1926 385 vessels entered and cleared, tonnage

99,069T. Pondicherry is visited by French steamers, sailing monthly between Colombo and Calcutta in connection with the Messageries Maritimes. The figures contained in this paragraph are the latest available and are corrected up to December 1926.

PONDICHERRY

Pondicherry is the chief of the French Settlements in India and its capital is the head quarters of their Governor. It is situated on the Coromandel Coast 105 miles from Madras by road and 122 by the Villupuram Pondicherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in the first January 1927 was 284,432. It consists of the eight communes of Pondicherry. The Settlement was founded in 1674 under Francois Martin. In 1693 it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Rocaewen in 1748 was unsuccessful. The second under Eyre Coote in 1761, resulted in the capture of the place which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793 and finally restored in 1816.

The Settlement comprises a number of isolated pieces of territory which are cut off from the main part and surrounded by the British District of South Arcot, except where they border on the sea. The Collector of

South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters and in this capacity is styled the Special Agent. At Pondicherry itself is a British Consular Agent accredited to the French Government, who is usually an officer of the Indian Army. The town is compact, neat and clean, and is divided by a canal into two parts, the Ville blanche and the Ville noire. The Ville blanche has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visitor of continental boulevards, and the houses being constructed with courtyards and embellished with green verandahs. All the cross streets lead down to the shore where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw pier which serves, when ships touch at the port as a point for the landing of cargo and on holidays as a general promenade for the population. There is no real harbour at Pondicherry; ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *matsia* boats of this coast. Facing the shore end of the pier is a statue of the great Duplex, to whom the place and the French name owed so much.

CHANDERNAGAR.

Chandernagar is situated on the bank of the Hooghly, a short distance below Chinsura. Population (in the first January 1927) 26,045. The town was permanently occupied by the French in 1683, though previously it had been temporarily occupied by them at a date given as 1673 or 1676. It did not, however, rise to any importance till the time of Duplex. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagar has

disappeared and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Duplex formerly called St. Mary's institution founded in 1832 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The settlement is divided into six communes, containing 110 villages in all and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1923 it was 93,055. In 1891, 70,526. In 1901, 66,593. In 1912, 56,579. In 1921, 54,356. In 1922, 54,008. In 1923, 57,023. In 1924, 56,922. In 1925, 279,603. In 1927, 284,432. But the density is still very high, being 1,063 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Each of the six communes—namely Karikal, La Grande Aldee, Nedungadu, Ocheri, Naray and Thiruvellar—possesses a mayor and council. The members are all elected by

universal suffrage but in the municipality Karikal half the number of seats are reserved for Europeans or their descendants. The country is very fertile being irrigated by seven branches of the Cauvery besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar about 1½ miles from its mouth. It has a brisk trade in rice with Oeylon and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Paralem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1615.

By those who take a long view of politics in the wide sense of the term it will be seen that the Indian Frontier Problem, which has loomed so large in the discussion of Indian questions has always borne a two fold character—the local issue and the international issue. For almost a century the international issue was the greater of the two and the most serious question which the Indian Government both directly and as the exponents of British Imperial policy had to face. But the tendency of recent times has been for the international aspect to recede and for the local aspect to grow in importance until now it may be said with as much truth as characterises all generalisations that the local issue dominates if it does not absorb the situation.

The Local Problem.—The local problem in its broadest outlines may be briefly indicated before proceeding to discuss it in detail. From the Arabian Sea on the West to the confines of Nepal is a wild and troublesome sea of the highest mountains in the world. The thin valleys in these immense ranges are poorly populated by hardy brave militant mountaineers rendered the fiercer and the more difficult by professing the martial Moslem faith accentuated by the most bitter fanaticism. But sparse as the population is it is in excess of the supporting power of the country. Like mountaineers in all parts of the world these brave and fearless men have sought to eke out their exiguous agriculture by raiding the rich plains of Hindustan. We may find a fairly close parallel to the situation in the position of the Highlands of Scotland until after the rebellion of 1745 the English Government of the day sought a permanent remedy by opening for the warlike Highlanders a military career in the famous Highland regiments and in rendering military operations easier by the construction of Wade's road. The Highland problem has disappeared so long from English politics that its pregnant lessons are little realised but if the curious student will read again that brilliant novel by Neil Munro

"The New Road" he will appreciate what Wade's work meant for the Highlands of Scotland and what lessons it teaches those who are called upon to face in its local aspect, the Indian frontier problem. So far as the area with which we are dealing was concerned two policies were tried. In Baluchistan the genius of Sir Robert Sandeman devised the method of entering into military occupation of the principal points and thence controlling the country. At the same time close engagements were entered into with the principal chiefs through whom the tribesmen were kept in order. That policy was so successful that whilst the administration was expensive the Baluchistan frontier did not seriously embarrass the Government of India from the time when Sandeman set his mark on the land. Not that the country was entirely peaceful. Occasional tribal raids or risings necessitated occasional military operations and the Gomal Pass was involved in the general tribal disturbances which followed the wanton declaration of war by Afghanistan in 1919. But speaking broadly, Sandeman brought peace to Baluchistan, and to the large frontier area which is embraced in that generic term, so far as this section of the frontier is

concerned it may be said that no frontier problem exists save the need for an economical and constructive policy.

Towards Afghanistan.—Far otherwise is it with the section of the frontier which stretches from Baluchistan to the confines of Nepal. That has for three quarters of a century been the scene of almost ceaseless military operations which have constituted a devastating drain on the Indian exchequer. One seeks in vain for a clear and definite policy guiding the actions of the Government of India. One explanation of these inconsistencies is found in the existence of two schools of thought. Once the frontier with Afghanistan had been delimited the soldiers naturally pressed for the armed occupation of the whole country right up to the confines of Afghanistan or at any rate for military posts linked with good communications which would dominate the country. But those who looked at policy not only from the military standpoint were conscious of two considerations. They saw that occupation up to the Afghan frontier only meant the shifting of the frontier problem farther North. Instead of the differing tribes we should have to meet the Afghan on our border line. If Afghanistan were a strong, homogeneous State that would be a matter of little account. But even under the iron rule of Abdurrahman Khan the Amir's writ ran but lightly in the southern confines of his kingdom. Under his successor Habibullah Khan, whose policy was generally wise and successful it ran still less firmly. The Amir was unable to control the organisation of the tribal gatherings which involved us in the Zalka Khel and Mohmand expeditions during the Indian secretaryship of that arth pacifist Lord Morley. Nor did it enable Habibullah to deal effectively with a rising against his own Governor in Kohat. The Afghan forces melted away under transport difficulties when they were moved against the rebellious Khoshtwais and the Amir had to make peace with his troublesome vassals. Therefore the occupation of the frontier up to what is called the Durand Line because it is the line demarcated by Sir Mortimer Durand as the British Plenipotentiary would simply have meant that in time of trouble we should have to deal with Afghanistan instead of a tribe or two and with the irreconcilable tribesmen along our difficult line of communications. There was the further consideration that financiers were of the sound belief that even if the Forward Policy was wise from the military standpoint it would involve charges over an indefinite period greater than the Indian finances would bear. Moreover on this section of the Frontier the position was complicated by the expansion of Russia in Central Asia. The easiest passes, and the passes down which for centuries from the time of Alexander the Great invaders have swept from Persia and Central Asia to loot the fat plains of Hindustan traverse this region. Therefore it was deemed essential to control if not to occupy them in the interests of the Imperial situation. In this zone therefore policy ebbed and flowed between the Forward School which would have occupied or dominated the whole Frontier up to the Durand Line that is to say up to the Afghan frontier and the

Close Border School, which would have us remain out of the difficult mountainous zone and meet the tribesmen on the plains if they sallied forth. The extreme advocates of this school would even have had us return to the line of the Indus.

The Two Policies—The result of this conflict of opinion was a series of waveling compromises, which like all compromises was profoundly unsatisfactory. We pushed forward posts here and there which irritated the Tribesmen and made them fearful of their prized independence without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. We preserved between our administrative frontier, and the Durand Line which demarcated our frontier with Afghanistan an irregular belt of land called The Independent Territory in which neither we nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it. Now it has often been asked why we did not follow the precedent of Baluchistan and Sandemanise the Independent Territory. That is one of the perennial topics of Frontier discussions. It is however important to bear in mind that there were essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan and he was able to enter into direct engagements with the tribal chiefs. There is no such tribal organisation in the Independent Territory. The tribal chiefs or maliks, exercise a very precarious authority, and the instrument for the collective expression of the tribal will is not the chief but the Jirga or tribal council, of the most democratic character, where the voice of the young men of the tribe often has the same influence in time of excitement perhaps more influence than the voice of the wisest greybeard. The bitter fruit of this policy of compromise was reaped in 1897, when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North West Frontier from the Gomal to the borders of Nepal. A force of thirty thousand strong had to be mobilised to deal with it. Even this large force owing to the immense difficulties of transportation was unable effectively to deal with the situation though peace was made. The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in masterly fashion. In the first place he separated the frontier zone from the Government of the Punjab which had hitherto been responsible for its administration and had organised for the purpose a special force of Frontier soldiers, known as the Punjab Irregular Frontier Force. This was the revival of a scheme as old as the viceroyalty of Lord Lytton though no other Viceroy had been able to carry it through. In the face of the strong opposition of successive Punjab Governments. The area so separated was constituted into a separate administrative zone under the direct authority of the Government of India exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the Regular troops in bases better linked with the main military centres of India by roads and railways. The advanced posts, and especially important

Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves and officered by British officers drawn from the ranks of the Indian Army. Later it was supplemented by a fine development policy. The construction of the Upper Swat Canal afterwards developed into the Swat Canal (see Irrigation) led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

Lord Curzon's Success—Judged by every reasonable standard the Curzon policy was successful. It did not give us complete peace. There were occasional punitive expeditions demanded such as for instance the Zakka Khel and Mohmand expeditions and the Waziris and in particular the truculent Mahsud Waziris never ceased raiding. But in comparison with what had gone before it gave us relative peace. It endured throughout the War though the Waziris built up a heavy bill of offences which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the war in the north of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his son father Abdurrahman Khan he nevertheless has high claims on the favourable verdict of history. None anticipated that any successor to Abdurrahman Khan could hold in the leash of a single State the fractious fanatical tribes who make up the population of the Afghan kingdom. Yet this Habibullah did. On occasion his attitude seemed to be equivocal as when armed gatherings of the tribes called lashkars were permitted to assemble in Afghan territory and to invade the Independent Territory causing the Zakka Khel and Mohmand expeditions. But we must not judge a Statelike Afghanistan by European standards. The Amir had often to bow before the fanatical elements amongst his own people until they had burnt their fingers by contact with the British troops. At the outset of the War he warned the Government that he might often have to do things which seemed unfriendly but they must trust him. In truth the position of the Amir when Turkey entered on the war, and called Moslems everywhere to arms on the side of Germany was extraordinarily difficult. He received Turkish German and Austrian missions in Kabul from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites his policy was justified up to the hilt. Indeed, his success was the cause of his assassination. The irreconcilable elements in the Kingdom saw that the day of reckoning had come and strove to avert the settlement of their account by the murder. When he was done to death his brother Nasrullah Khan was proclaimed Amir by the assassins. But the conscience of Afghanistan revolted against the idea of Nasrullah, the arch-fanatic of the ruling House of Kabul, ascending the throne over the blood-stained corpse of his brother. A military movement in Kabul itself

bombed him aside and installed the son of Habbibullah, Amanullah Khan, on the throne. But Amanullah Khan soon found it was a thorny bed on which he lay and encouraged by the disorders in India which followed the passing of stringent measures to deal with anarchical crime set his troops in motion in April 25 1919 and preaching a *shahad* promised his soldiery the traditional loof of Hindustan. The Indian Army was at once set in motion, and as has always been the case the regular Afghan Army was easily beaten. Dacca was seized, Jelalabad and Kabul were frequently bombed from the air and there was nothing to prevent our occupation of Kabul save the knowledge gleaned from the bitter heritage of the wars of 1838 and 1878 that it is one thing to overeat a government in Afghanistan but it is quite another to set up a stable government in its stead. The Government of India wisely held their hand and the Afghans having sued for peace a treaty was signed on the 8th August 1919.

But an untoward effect of this wanton war was to set the frontier from the Gomal to the Khyber ablaze. With one or two exceptions the Tribal Militia could not stand the strain of an appeal from their fellow tribesmen and either melted away or joined the rising. This has often been described as the failure of the Curzon policy which was based on the tribal militia. But there is another aspect to this issue which was set out in a series of brilliant articles which Mr Arthur Moore its special correspondent contributed to *The Times*. He pointed out that the militia was meant to be a military police force. The lapses of time and forgetfulness of its real purpose had converted the militia into an imitation of the regular army. The Militia was meant to be a police. When the war broke out its units were treated as a covering force behind which the Regular Army mobilised. This is a role which it was never intended they should serve exposed to a strain which they should never have been called upon to bear they crumpled under it. If this reasoning is correct—and a strong case can be marshalled in support of it—then what has been called the failure of the Curzon policy arose from the misconception and misdirection of that policy.

Russia and the Frontier—On the other hand if it be admitted that the Curzon policy was sound and that its success was marked—a proposition with which we are in general agreement—it can also be claimed that the Curzon policy owed no small measure of its success to extraneous events. The greatest external force in moulding Indian frontier policy was the long struggle with Russia. For nearly three quarters of a century a vellel warfare for predominance in Asia was waged between Great Britain and Russia. There are few pages in British foreign policy less attractive to the student of Imperial affairs. Russia was confronted in Central Asia with precisely the same conditions as those which faced England in India when the course of events converted the old East India Company from a trading corporation into a governing body. The decaying khannates of Central Asia were impossible neighbours. Confronted with an inferior civilisation and with neighbours who would not let her alone, Russia had to advance. True, the adventurous spirits in her armies, and some of the

great administrators in the Tsarist capital were not adverse to paying off on the Indian Borderland the score against Great Britain in the Crimean War, and for what the Russians thought was depriving them of the fruits of their costly victory over Turkey in 1877-78. The result was a long and unsatisfactory guerilla enterprise between the hardest spirits on both sides accompanied by periodic panics in the British Press each time the Russians moved forward which induced the ceding, after the Russian occupation of Merv of the generic term *Mervousness*. This external force involved the Government of India in the humiliations of the Afghan War of 1838 with the tragic destruction of the retiring Indian force between Kabul and Jelalabad slightly relieved by the heroic defence of Jelalabad and the firmness of General Pollock in refusing to withdraw the punitive army until he had set his mark on Kabul by the razing of the famous Bala Hissar fortress. It involved us in the second Afghan War of 1878 which left the baffling problem of no stable government in Afghanistan. There was a gleam of light when Abdur Rahman Khan whom we set up at Kabul to believe us of our perplexities proved himself a strong and capable ruler if one ruthless in his methods. But in the early eighties the two States were on the verge of war over a squabble for the possession of Penjdeh and then men began to think a little more clearly. There began a series of boundary delimitations and agreements which clarified the situation, without however finally settling it. The old controversy broke out in another form when intrigues with a Buddhist monk Dorjoff during Lord Curzon's viceroyalty gave rise to the grave suspicion that the scene had only shifted to Tibet. An expedition to Lhasa rent the veil which had so long concealed the mysterious city and dispersed the miasma of this intrigue. But it was not until the conclusion of the Anglo-Russian agreement of 1907 that the two countries arrived at a stage long sought by those who looked beyond their noses. The actual authors of the Agreement were Lord Grey the Foreign Secretary and Lord Hardinge formerly British Ambassador in Petrograd, but it had been declared by their predecessors whose efforts were rendered nugatory by the intransigent attitude of the dominant forces in Petrograd. It was not until Russia was chastened on the battlefields of Manchuria by Japan and disappeared as a sea power in the decisive battle of Tsushima, that an atmosphere was created favourable to the conclusion of an Agreement. This embraced the whole frontier zone. There were many unsatisfactory features in the Agreement, especially in regard to Persia, for which we had to pay a considerable price in the attitude of Persians in the War. But again taking long views the Agreement fully justified itself in a broad definition of the interest of the two countries which put an end to the period of excursions and alarms up to the outbreak of the War. Henceforward Russia ceased to be a material factor in the Indian Frontier. Problem with the exception of a brief period when the Red Army was trotted out as another bogey.

German Influence—But as nature abhors a vacuum so in the case of States bordered by higher civilisations, no sooner does one strong

influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon. Initiative, not creative in this as in most other activities, the Germans adapted their methods from the penetration by railway which was so marked a feature of Russian expansion in Manchuria, brought to an end by the disastrous issue of the war with Japan. The seeds of the German effort were sown when the Kaiser extending the hand of Christian fellowship to the Sultan of Turkey, Abdul Hamed, at a time when that sovereign was ostracised by Europe for his direct complicity in the massacre of Armenians or rather one of the massacres of Armenians made German influence supreme at Constantinople. His theatrical tour through Palestine which was generally treated in Europe as an exhibition of opera bouffe, soon bore fruit in the acquisition by Germany of interests of the principal railways in Anatolia. Later it fructified more effectively in the Baghdad Railway concession under which German interests secured the right of extending the Anatolian lines from the port of Haider Pasha opposite Constantinople to a port in the Persian Gulf. Now successive British Statesmen of both parties had declared that the acquisition of a territorial foothold in the Persian Gulf by any power—Russia and the port of Bander Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarms and excursions which had disfigured our relations with Russia. Undaunted even when their endeavour to secure British co-operation in the enterprise failed and when the Revolution in Turkey quashed the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople the Germans pressed forward with their enterprise. They pushed the Anatolian railways as far east as Bourguin and constructed a line northwards from Baghdad to Samara. They sent a mission to explore the potentialities of the port of Koweit in the Persian Gulf and set the Turks in motion to subordinate the Sheikh of Koweit to direct Turkish sovereignty with a nominal view to extending the Baghdad railway from Basra to Koweit, or the vicinity of Koweit at the deep water inlet behind Bubiya Island. They commenced the most difficult part of the work in piercing the Amanus and Taurus ranges by a series of tunnels and laid the rails on the other side of the mountains across the Euphrates to Ras-al Ain. Behind this railway activity stood a grandiose policy which is indicated in what became known in Germany as 'B B B'—Berlin Byzantium Baghdad. Throughout the progress of these schemes which did not stop short of Baghdad but were directed through a port in the Persian Gulf at India, the Germans were anxious to secure the co-operation of Great Britain, if they could do so on their own terms that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the war the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Gulf section of the line was to have been British, and the other portion German. But this agreement which

had not been signed became waste paper with the outbreak of the war, and the German plans vanished in thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

The Significance of the Baghdad Railway

—The real significance of the Baghdad Railway was little appreciated in Great Britain. It was constantly pictured as a great trunk line which would short-circuit the traditional British dominance by sea and absorb the passenger and goods traffic from the East. This idea could only be nourished by those completely ignorant of the conditions of the Indian passenger service and the essentials of a competitive route for the carriage of merchandise. The rush of passenger traffic from India is from April to June in order to escape the hot weather in India, and the return traffic is chiefly concentrated in October and November. From April to June the heat in Mesopotamia is appalling. To imagine that the passenger traffic from India would turn from the easy and comfortable as well as fairly expeditious sea route from Bombay to Marseilles and thence by the easiest railway travelling outside the British Isles to Calais and London for such a land route was an amazing chimera. The Baghdad route would have involved a sea voyage from Bombay or Karachi to Koweit or Basra, then a journey across the burning plains of Mesopotamia and Asia Minor to Haider Pasha, then across the Straits to Constantinople and finally right across Europe to a North Sea port. This would in any circumstances have been a costly freak journey in comparison with the sea route. Then as for the commercial aspect of the line the natural port of the Middle East is Basra. The sea freight from England or Germany to Basra is about one pound sterling a ton before the war it was often down to fifteen shillings. The freight from Basra to Baghdad was from thirty shillings to two pounds a ton. To imagine again that merchandise would desert this route for a land and sea route which would have involved a double break of bulk at Constantinople and Haider Pasha, is again a chimera: the freight charges could not have been less than fifteen to twenty pounds a ton.

As a through route the primary purpose of the Baghdad Railway was strategic. It was designed to make the Power seated at Constantinople—and that Power the Teutons were resolved should be Germany—complete master of Asia Minor and the Middle East and the route selected often criticised was the best for the rapid movement of troops to the strategic centres. As a commercial line the Railway if completed, would have served three zones. The western area of Turkey in Asia at Haider Pasha. The rich lands of Anatolia at Alexandrette. The eastern zone at Basra. The Germans it is understood attached immense importance to the subsequent engagements with Turkey which placed them in maritime command at Alexandrette. They began to inaugurate a commercial position in the Persian Gulf through the establishment of a subsidised line of steamers run by the great Hamburg America corporation.

They strove to obtain an actual footing in the Gulf through the German house of Woonhaus. We doubt if the Germans were ever serious in their alleged designs on Koweit which could never have borne a more definite relation to the commerce of the Gulf than Flushing to Antwerp or Cuxhaven to Hamburg, that was one of the red herrings they drew across their trail to divert attention from their real objective Basra which is destined by virtue of an unchallengeable geographical and natural position to be the great port of The Middle East. These considerations have no more than an academic value now. Germany has been defeated. The Turks now they are emerging from an isolated military despotism based on Angora are confronted with the immense problem of rebuilding their bankrupt State, deprived of the most intelligent section of the old population—the Greeks and the Armenians by massacre and expulsion—are a very uncertain factor. The completion of the through line is indefinitely postponed. But as the advantages of the route for the purposes we have indicated are many and great, the ultimate construction of the through line is only a matter of time so we have placed these authoritative characteristics on record for the guidance of opinion when the project of the through route is revived as it must be.

Turkey and the Frontier—The position of Turkey on the Indian frontier was never of any considerable importance in itself and never assumed any significance save as the *corner stone* of Germany when she passed under the tutelage of that Power and for a limited period during the war. Although so long established in Mesopotamia Turkey was not very firmly seated in that country. The Arabs tolerated rather than accepted Turkish rule so long as they were substantially left alone and the administration it is understood never paid its way. For a brief period Midhat Pasha raised the status of Mesopotamia and after the Revolution that fine soldier Nazim Pasha became a power in the land. But speaking broadly Turkey remained in Mesopotamia because it was *no-one's interest even that of the Arab* to turn her out. When however Germany developed her B.B.B. policy Turkey was used as a stalking horse. She moved a small force to the Peninsula of Al Katr in order to frighten the Sheikh of Bahrain and tried to convert the nominal suzerainty exercised or rather claimed over the Sheikh of Koweit into a *de facto* suzerainty exercised by military force. These efforts faded before the vigorous action of the British Government which concluded a binding arrangement with the Sheikh of Koweit, and the position of the Turks at Al Katr was always very precarious. On the outbreak of the war however the situation changed. When the sound and carefully executed expedition to Basra and its strategic hinterland was developed into the insane enterprise to capture Baghdad by *coup de main* with very inadequate forces, and still more inadequate transport, we found ourselves involved in military operations of the most extensive and unprofitable character. These were completely successful with General Maude's occupation of Baghdad. After the Russian débâcle we found ourselves involved in a new front, which stretched from

the Euphrates to the wildest part of Central Asia, producing military exploits of an almost epic character, but exercising little influence on the war. They were brought to an end by pressure not on extensive wings, but at the heart of Turkish Power in Palestine where Lord Allenby scattered the Turks like chaff. But the aftermath of the war left us in an indefinite position in Mesopotamia with indefinite frontiers. This enabled the Turks if they were so disposed to be troublesome through guerrilla warfare in the Mosul Zone and by stirring up the Kurds, who are the Ishmaelites of Asia Minor. The conclusion of the Treaty of Lausanne in 1923 brought temporary relief but it did not settle the main issue the frontier between Turkey and Iraq. Under the Treaty it was provided that if the two parties could not agree to a boundary line delimitation should be left to The League of Nations. Negotiations were promptly opened at Constantinople but it was immediately found that there could be no mutual agreement. The Turks demanded the whole of the Mosul velayet and the British delegates declared that Mosul and its hinterland were necessary to the existence of Iraq. The issue therefore went to the League of Nations. That body despatched a neutral commission to study the position on the spot. This commission reported that the best settlement would be for the Mosul velayet to be incorporated in Iraq, if the British Government were prepared to prolong its mandate over that State for a period of twenty five years. When the report of this commission came before the League in 1925 Britain gave the necessary guarantee and the Council of The League unanimously allotted the Mosul velayet to Iraq. The Turkish delegates, who at first recognised the decisive authority of The League then declared that they would not be bound by its decisions. So the matter rested at the end of the year with Iraq in occupation of the disputed up to the temporary frontier which is known as The Brussels Line. After *at first* breathing nothing but armed resistance to acceptance of the award the Turks afterwards assumed a more conciliatory note and alarmed it may be by the threat of Italian aggression accepted the frontier line demarcated by the League.

France and the Frontier—If we touch for a few sentences on the position of France on the frontiers of India it is not because they have any present day significance but in order to complete this brief survey of the waxing and waning of external influences on Indian frontier policy. It is difficult to find any sound policy behind the efforts of France to obtain a coaling station at Maskat in the Persian Gulf and her long opposition to the steps necessary to extricate the slave trade and hold in check the immense traffic in arms which was equipping all the tribesmen on our North West Frontier with rifles of precision and a large supply of ammunition. We can find no more definite purpose in it than a general pin pricking policy, a desire to play the part of Russia and perhaps a source of annoyance to Great Britain which would form a useful lever for the exaction of considerable concessions in West Africa particularly in the neighbourhood of Gambia as the price of abstention. These embarrasments were slowly removed one by one after the conclusion

of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the vexed British protectorate of Egypt. There had earlier been mutterings in Burma. We were established in Lower Burma in the thirties and in the eighties the foolish and tyrannical King Theebaw in Upper Burma, became an impossible neighbour and ambitious Frenchmen were not averse to fanning his opposition to the British. However if any hopes were entertained of extending the Asiatic possessions of France in this direction they were dissipated by the Second Burmese War and the firm establishment of British rule. Far other wise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma then a regular Province of the Indian Empire, and French Indo-China. This policy was definitely challenged by French encroachments on Siam. Matters approached a crisis in 1894, and we were within measurable distance of a situation which might have ended in open war between the two States. But as in the case of Penjdeh, and later when Major Marchand marched across Africa to Fashoda, the imminence of hostilities made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing essential and an agreement was negotiated between the two Powers, which secured the independence and integrity of Siam. That agreement has been consolidated by wise and progressive rule in Siam itself under its own independent sovereign who is imbued with a strong friendship for Great Britain whilst at the same time maintaining good relations with French neighbours.

The New Frontier Problem.—The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1838—the Indian frontier problem has never been a local problem. It has been dominated by external influences—in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route and to a much lesser extent by the ambitions of France and Turkey. All these external influences have disappeared. There is no such prospect of their revival as justified us in taking them into consideration in the measures which are forced on the Government responsible. The Indian frontier question has therefore developed from an Imperial into a local question—a condition on which we must lay fast hold because people are tenacious of old ideas especially when they are nearly a century old, and no proper understanding of the present position is possible unless our consideration of it is governed by this essential fact that the frontier question is purely local. But whilst these world changes were taking place others were in progress which powerfully influence the difficulty of the situation. The tribesman was always an opponent to be respected. Brave hardy fearless he has always been a first-class fighting man. Knowing every inch of the inhospitable country in which punitive operations must of necessity take place he has hung

on our rearwards and given them an infinite of trouble. Even when armed with a jeal and when every cartridge had to be husbanded with jealous care the tribesman was a respectable antagonist. Now the tribesman are everywhere armed with magazine rifles either imported through the Persian Gulf when gun-running was a thriving occupation, stolen from British magazines or secured from Russian and Afghan sources. They have an abundant supply of ammunition. Considerable numbers of the fighting men have been trained in the ranks of the Indian Army either as Regulars in the Pathan regiments or else in the tribal militias. We found this to our cost in the events following the Afghan War of 1919. The Afghan regular army was of little account. The tribesmen who rose at the call of the Jihad especially in Waziristan were of great account. They gave our troops the hardest fighting they have ever had on the Frontier, their marksmanship and fire discipline were described by experienced soldiers as admirable. The tribal militia, the keystone of the Curzon system, had for all practical purposes disappeared. What was to take its place?

Immediately following the Afghan War the frontier positions were garrisoned by regular troops but this was only a temporary measure. It may be said that the crux of the situation was in Waziristan. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people. Besides possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace and the consequent lapsing of any necessity to preserve open lines of communication which would enable us to go to the support of Afghanistan now formally recognised in the Treaty of 1921 as a completely independent state there were many who urged the desirability of complete withdrawal even to the line of the Indus. This extreme school gained little support. Our position in Quetta on the one side and Peshawar on the other is fully consolidated and no good case can be made out for withdrawing from it. On the other hand there was a strong case made out for leaving the tribesmen severely alone from the Gomal to the Kurram and dealing with them if they emerged from their fastnesses. The military standpoint was that the Waziris are absolutely intractable that it was unfair to impose on troops the frequent necessity of punitive operations in most arduous conditions and that the only solution of the question was the occupation of dominant points in Waziristan, as far north as Laddha and linking these posts with our military bases and particularly with the terminal of the Indian frontier railways, by good motor roads.

This controversy has not ended yet indeed one feels inclined to say that it never will end. It has resulted in a typically British compromise. The present policy has been aptly described as the half forward policy. There has been no withdrawal in the ordinary sense of the term, but the limits of the Waziristan occupation have been fixed at Bannak, not at Laddha. The network of consequential roads is being pushed forward.

The Indian rail head which for so long terminated at Jamrud at the southern entrance to the Khyber Pass has now been extended to Landi Kotal and the frontier between India and Afghanistan. The regular troops have been withdrawn, and their place taken by khazadars. The difference between the khazadars and the old tribal militia is material. The militia were armed and equipped by the

Indian military authorities, if they disappeared they took their arms and ammunition with them and constituted a powerful reinforcement. The khazadars bring their own rifles with them, and therefore if they desert they do not constitute any reinforcement to those in arms against us. Many of these khazadars have already done good work in the punishment of tribal raids.

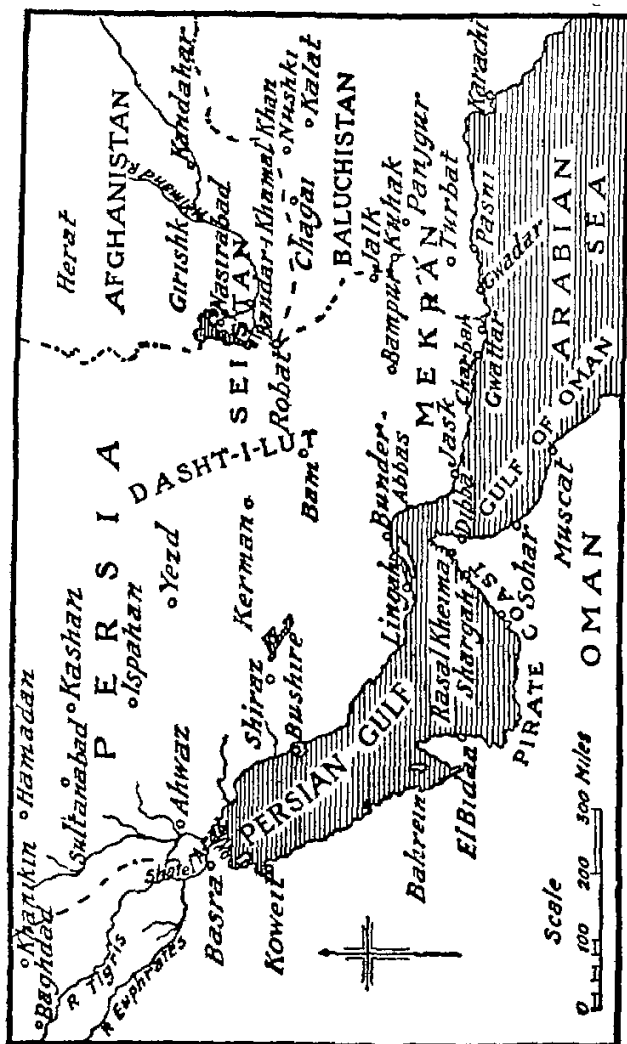

1—THE PERSIAN GULF

From what has gone before it will be seen that the keynote of this discussion of Indian frontier policy is that the external menace has disappeared and that it is now a purely local question. No part of the frontier is more powerfully influenced by this consideration than the Persian Gulf. Our first appearance in the Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch, who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, the supercession of the land by the sea route and the appearance of anarchy in the interior, the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace. This work it quietly and efficiently performed. Piracy was stamped out, the Trucial Chiefs who occupy the Pirate Coast were gradually brought into close relations with the Government, the vessels of the Royal Navy kept watch and ward and our consuls regulated the external affairs of the Arab rulers on the Arab coast. In return for these services Great Britain claimed no selfish advantages. The waters of the Gulf were kept free to the navigation of the ships of all nations and though Great Britain could have made any territorial acquisitions she pleased she retained possession of only the tiny station of Basaidir. Left to herself Great Britain claimed no other policy but for a quarter of a century the Gulf was involved in European affairs. France sought to acquire a coaling station at Jassa, near Maskat, and obstructed the efforts of the British Government to stamp out the slave trade and to check the immense traffic in arms which was equipping the tribes on our land frontier with weapons of precision and quantities of ammunition. All causes of difference were gradually removed by agreements following the Anglo-French Entente. Russia sent one of her finest cruisers to show the flag in the Gulf and established consular posts where there were no interests to preserve. She was credited with the intention of occupying a warm water port and in particular with casting covetous eyes on the most dreadful spot in the Gulf, Bandar Abbas. This menace declined

after the signing of the Anglo-Russian Agreement, and disappeared with the collapse of Russian power following the Revolution. Then Turkey, either acting for herself or as the agent *couvert* of Germany, under whose domination she had passed began to stir. She threatened the Sheikh of Bahrain by the armed occupation of the peninsula of Al Kutr and moved troops to enforce her suzerainty over Koweit, the best port in the Persian Gulf and a possible terminus of the Baghdad Railway. Further to consolidate her interests or to stake out a claim Germany sent the heavily subsidised ships of the Hamburg American Line to the Gulf, where they comported themselves as the instruments of Imperial policy rather than as inoffensive merchantmen. She also strove, through the agency of the firm of Wankhans, to acquire a territorial footing on the island of Shargh. These events stirred the British Government to an unusual activity in the waters of the Gulf.

Counter Measures

The first effective steps to counter these influences were taken during the vigorous viceroyalty of Lord Curzon, who visited the Gulf during his early travels and incorporated a masterly survey of its features in his monumental work on Persia. He appointed the ablest men he could find to the head of affairs, established several new consulates and was instrumental in improving the sea communications with the Gulf ports. The British Government also took alarm. They were fortified in their stand against foreign intrigue by the opinion of a writer of unchallenged authority. The American naval writer, the late Admiral Mahan, placed on record his view that "Concession in the Persian Gulf whether by formal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control will imperil Great Britain's naval position in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Australasia." The Imperial standpoint, endorsed by both Parties in the State was set out by Lord Lansdowne in

words of great import—'We (i.e., His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests which we should certainly resist with all the means at our disposal. The negative measures which we should certainly follow by a constructive policy when the oil fields in the Bakhtiari country, with a great refinery were developed by the Anglo-Persian Oil Company in which the British Government has a large financial stake. But with the disappearance of these external forces on Gulf policy as set out in the introduction to this section the politics of the Persian Gulf receded in importance until they are now more than they were before these external influences developed—a local question mainly a question of police. They are therefore set out more briefly and those who desire a complete narrative are referred to the Indian Year Book for 1928, pp 178-138.

Maskat

Maskat, which is reached in about forty eight hours from Karachi is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandam, which is the real entrance to the Gulf but its natural strength and historical prestige combine to make it inseparable from the politics of the Gulf with which it has always been intimately associated.

Formerly Maskat was part of a domain which embraced Zanzibar and the islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected. The Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent.

The Pirate Coast

Turning Cape Musandam and entering the Gulf Proper we pass the Pirate Coast controlled by the six Trucial Chiefs. The ill name of this territory has now ceased to have any meaning but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind and they did not hesitate to attack on occasion and not always without success the Company's ships of war. Large expeditions were fitted out to break their power with such success that since 1820 no considerable punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements beginning with 1808 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations

of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection.

The commercial importance of the Pirate Coast is increasing through the rise of Debal. Formerly Lingah was the entrepot for this trade but the exactions of the Belgian Customs officials in the employ of Persia drove this traffic from Lingah to Debal. The Trucial Chiefs are—Debal, Abu Thabeeb, Shargah, Ajman, Um-al-Gawain and Ras-el Khayma.

Bahrain.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrain. Of this group of islands only those of Bahrain and Manrak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery which in a good year may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore which is not even approachable by boats, and passengers mails and cargo have to be landed on the donkeys for which Bahrain is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling and the customs revenue, which amounts to some eighty thousand pounds, makes the Sheikh the richest ruler in the Gulf.

In the neighbourhood of Bahrain is the vast burying ground which has hitherto baffled archaeologists. The generally accepted theory is that it is a relic of the Phoenicians who are known to have traded in these waters.

Political Agent Captain R. G. E. W. Alban

Kowet

In the north west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Kowet lies solely in the fact that it is the one possible Gulf terminus of the Baghdad Railway. This is no new discovery for when the Euphrates Valley Railway was under discussion General Chesney selected it under the alternative name of the Grange, so called from the resemblance of the formation of the Bay to a pair of horns—as the sea terminus of the line. Nowhere else would Kowet be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is people by some 20,000 inhabitants chiefly dependent on the sea, for the mariners of Kowet are noted for their boldness and hardihood.

Political Agent Major O. C. J. Barrett, C.B., C.M.

Muhammarah

On the opposite side of the entrance to the Shatt-el Arab lie the territories of Sheikh Khassal of Muhammarah. The town, favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Messrs. Lynd.

Brothers, this route provides the shortest passage to Isfahan and the central tableland, and already competes with the older route by way of Basra and Shiraz. This importance has grown since the Anglo-Persian Oil Company established refineries at Muhammarah for the oil which they win in the rich fields which they have tapped near Ahwas. Its importance will be still further accentuated if the scheme for a railway to Khorremabad by way of Dibal matures. A concession for a road by this route has long been held by a British Company.

Vice Consul at Ahwas Captain H. A. Barnes

Basra

In a sense Basra and Turkish Arabistan can hardly be said to come within the scope of the frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the inevitable sea terminus of the Baghdad Railway. It stands on the Shatt-el-Arab sixty miles from its mouth, favourably situated to receive the whole water-borne trade of the Tigris and Euphrates rivers. The local traffic is valuable for the richness of the date groves on either side of the Shatt-el-Arab is indisputable, there is a considerable entrepot traffic whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route via Kerman, Shah and Hamadan.

The political destinies of Basra are at present wrapped up with the destinies of the new Arab State which we have set up in Mesopotamia under King Faisal. When the war was over we found ourselves committed to immense undefined and burdensome responsibilities in that land. The sound concepts which dictated the original expedition were dislocated in the foolish advance to Baghdad, then the great military enterprises necessitated by the fall of Kut-el-Amara carried our frontier north to Mosul and the mountains of Kurdistan, east to the Persian boundary and west to the confines of Trans-Jordan. Amongst ardent Imperialists there was undoubtedly the hope that this immense area would be in one way or another an integral part of the British Empire. The cold fit followed when the cost was measured and the Arabs rose in a rev. it which showed that any such domination could only be maintained by force of arms and that the cost would be prodigious. Under these circumstances King Faisal was imported from the Hedjaz and installed on the throne under the aegis of Great Britain. Still we were committed to the support of the new kingdom, and that most dangerous condition arose—responsibility without any real power unless King Faisal was to be a mere puppet. Immense expenditure and indefinite military commitments. In these circumstances there was an insistent demand for withdrawal from the land. British policy moved slowly towards that end but a definite step was taken in 1923. The Secretary of State for the Colonies announced this policy in a statement which is reproduced textually for the purpose of reference. Addressing the House of Lords on May 3rd he said—

Your Lordships will remember that the Cabinet have been discussing this matter for some time and decisions have now been taken.

Sir Percy Cox has accordingly been authorised by His Majesty's Government to make an announcement at Baghdad the terms of which I propose to read out to Your Lordships. This announcement was drawn up in consultation with King Faisal and his Government and has their cordial assent. It is being published at Baghdad to-day.

The announcement is as follows—

It will be remembered that in the autumn of last year after a lengthy exchange of views it was decided between the Governments of His Britannic Majesty and His Majesty King Faisal that a Treaty of Alliance should be entered into between His Britannic Majesty and His Majesty the King of Iraq. This Treaty, which was signed on the 10th October 1922, and the term of which was to be twenty years (subject to periodical revision at the desire of either party) provided for the establishment of an independent Constitutional Government in Iraq enjoying a certain measure of advice and assistance from Great Britain of the nature and extent indicated in the text of the Treaty itself and of subsidiary Agreements which were to be made thereunder.

Since then the Iraq Government has made great strides along the path of independent and stable existence and has been able successfully to assume administrative responsibility and both parties being equally anxious that the commitments and responsibilities of His Majesty's Government in respect of Iraq should be terminated as soon as possible it is considered that the period of the Treaty in its present form can conveniently be shortened. In order to obviate the inconvenience of introducing amendments into the body of a Treaty already signed it has been decided to bring about the necessary modifications by means of a protocol which like the Treaty itself will be subject to ratification by the Constituent Assembly.

Accordingly a protocol has now been signed by the parties in the following terms—

It is understood between the High Contracting Parties that notwithstanding the provisions of Article 18 the present Treaty is all terminate upon Iraq becoming a member of the League of Nations and in any case not later than four years from the ratification of peace with Turkey. Nothing in this protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties and negotiations for that object shall be entered into between them before the expiration of the above period.

It will be noticed that under this protocol the Treaty in its present form is to terminate on the entry of Iraq into the League of Nations or in four years whichever may be earlier.

The position of Iraq as regards the League is that when the Treaty has been ratified His Britannic Majesty will be bound under Article 6 to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible. His Majesty's Government will be in a position to take this step on the fulfilment of the two following essential conditions, namely the delimitation of the frontiers of Iraq, and the establishment on a stable government in accordance with the Organic Law

Under the Treaty of Lausanne between Turkey and the Powers which was signed in 1923, it was agreed that the frontier between King Faisal's State and Turkey the important frontier because the future of Mosul was in dispute should be settled by the League of Nations, should Great Britain and Turkey be unable to come to agreement by direct negotiation. Those direct negotiations were opened at Constantinople but no agreement was reached on the question was opened before the Council of the League in September 1924. Whilst the matter was under discussion complaint was made by Great Britain that Turkey had violated the provisional frontier drawn in the Treaty of Lausanne and certain irregular hostilities were carried on in the disputed zone. This matter too was remitted to the League and a further provisional boundary was drawn which was accepted by both parties.

Here the matter remained until the autumn of 1925. In order to secure the material for a decision the League of Nations despatched a neutral commission to Mosul to investigate the situation. This commission produced a long and involved report but one which led by devious paths to a common sense recommendation. It was that the first essential in the Mosul vilayet is stable government. The desires of the people were for incorporation in the State of Iraq. If therefore the British Government was willing to extend its mandate over Iraq for a further period of twenty five years—a guarantee of stable government—then Mosul should be incorporated in Iraq. If Britain was not willing then Mosul should return to Turkey. When the matter came before the Council of the League Great Britain gave the necessary guarantee. The Turks thereupon challenged the whole competence of the Council to give an award under the terms of the Treaty of Lausanne. The issue was remitted to the Court of International Justice at The Hague which decided in favour of the competence of the Council. About this time there was published the report of a distinguished British General General Laidoner who had been despatched by the League to investigate allegations of brutality by the Turks in deporting Christians from their own zone and this report was of the most damning character. Great Britain having given the necessary assurance that she was prepared to extend her mandate over Iraq for a further twenty five years thereupon the Council of the League allocated the whole of the area in dispute right up to the temporary frontier—commonly called The Brussels Line—to Iraq. The Turks refused to accept the award and withdrew from Geneva threatening force. Later when counsel and in 1926 Turkey accepted a frontier substantially as drawn by the League. A formal treaty was concluded between Great Britain and Iraq extending the mandate for a further twenty five years. The British Government expresses the hope that a shorter period will be sufficient to set Iraq on its feet as an independent and stable State but these hopes are not shared by any who know the country. They are convinced that at least two generations must pass before Iraq can stand alone.

A New Treaty—A new Treaty regulating the relation of Iraq with Great Britain the Mandatory Power was negotiated in 1927 and signed towards the end of the year. The full text is not available but a semi official announcement on December 26th may be regarded as substantially authentic.

The Treaty declares that there shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. It states that "Provided the present rate of progress in Iraq is maintained and all goes well in the interval His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932." It stipulates that separate agreements superseding those of March 20, 1924 shall regulate the financial and military relations.

The King of Iraq undertakes to secure the execution of all international obligations which His Britannic Majesty has undertaken to see carried out in respect of Iraq. He also undertakes not to modify the existing provisions of Iraq's organic law so as adversely to affect the rights and interests of foreigners and to constitute any difference in the rights before the law among Iraqis on the grounds of differences of race religion or language.

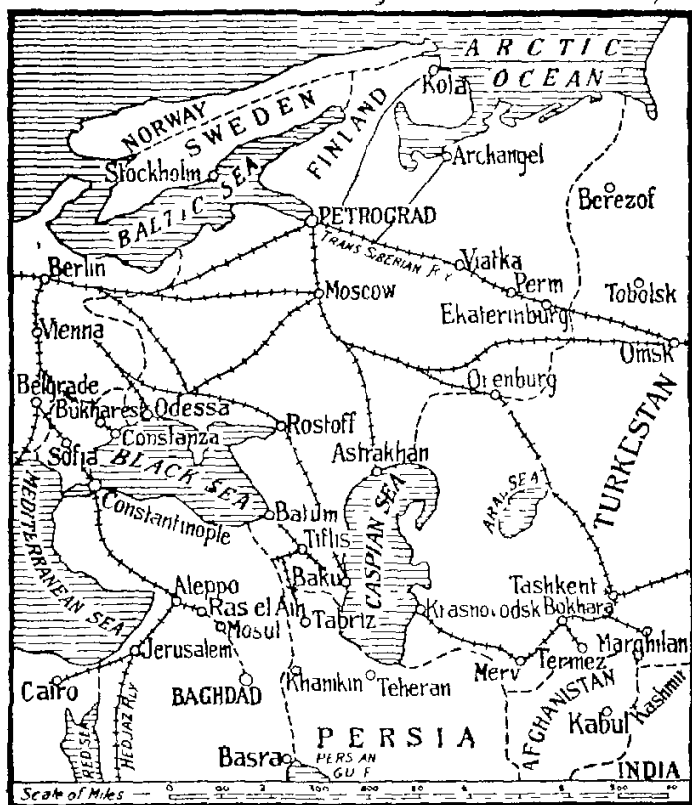

There shall be full and frank consultation between the high contracting parties in all matters of foreign policy which may affect their common interests. The King of Iraq undertakes so soon as local conditions permit to accede to all general international agreements already existing or which may be concluded hereafter with the approval of the League of Nations, in respect of the slave trade the traffic in drugs arms and munitions the traffic in women and children transit navigation aviation and communications, and also to execute the provisions of the Covenant of the League of Nations, the Treaty of Lausanne, the Anglo-Franco Boundary Convention and the San Remo Oil Agreement in so far as they apply to Iraq.

There shall be no discrimination in matters concerning taxation commerce or navigation against nationals or companies of any State which is a member of the League of Nations or of any State to which the King of Iraq has agreed by Treaty that the same rights should be ensured as if it were a member of the League.

Any difference that may arise between the high contracting parties shall be referred to the Permanent Court of International Justice provided for by Article Fourteen of the Covenant of the League. The Treaty shall be subjected to revision with the object of making all the modifications required by the circumstances when Iraq enters the League of Nations.

It is important to remember that there is a considerable difference between the vilayet of Basra and the other portions of King Faisal's State. Basra has for long been in the closest commercial contact with India and is in many respects a commercial appendage of Bombay. Its people have not much in common with those of the North. They took no part in the Arab rising which followed the war and they ask nothing better than to remain in close touch with India and through India with the British Government. If we are correct in the

Railway Position in the Middle East.

supposition that Bama is destined to be the great port of the Middle East then its future under an Arab State, with no experience of administration in such conditions is one of the greatest interest which can hardly be regarded as settled by the policy underlying the declaration which is set out above.

The Persian Shore

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial. It is the headquarters of Persian authority, the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Isfahan. But the anchorage is wretched and dangerous, the road to Shiraz passes over the notorious kotals which preclude the idea of rail connection, and if ever a railway to the central tableland is opened, the commercial value of Bushire will dwindle to insignificance. Further south lies Lingah, reputed to be the prettiest port on the Persian coast, yet its trade is being diverted to Debal on the Frate Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman

and Yezd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lies the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandam lies another sheltered deep-water anchorage, Euphratstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. On the Mekran coast there is the cable station of Jask, and the possible port of Chahbar.

II—SELISTAN

The concentration of public attention on the Persian Gulf was allowed to obscure the frontier importance of Selistan. Yet it was for many years a serious preoccupation with the Government of India. Selistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfikar and that where the frontiers of Persia and of our Indian Empire meet on the open sea at Gwattar. It marches on its eastern border with Afghanistan and with Baluchistan. It commands the valley of the Helmand, and with it the road from Herat to Kandahar and its immense resources as a wheat-producing region have been only partly developed under Persian rule. It offers to an aggressive rival an admirable strategic base for future military operations. It is also midway athwart the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean and if and when the line from Ashkabad to Meshed were built, the temptation to extend it through Selistan would be strong. While the gaze of the British was concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta and through Kabul to Peshawar, there can be little doubt that Russian attention was directed to a more leisurely movement through Selistan, if the day came when she moved her armies against India.

Whether with this purpose or not, Russian

intrigue was particularly active in Selistan in the early years of the century. Having expelled Khorassan her agents moved into Selistan and through the agency of the Belgian Customs officials scientific missions and an irritating plague cordon sought to establish influence and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission which, in pursuance of Treaty rights was demarcating the boundary between Persia and Afghanistan with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Selistan has waned.

The natural conditions which give to Selistan this strategic importance persist. Meantime British influence is being consolidated through the Selistan trade route. The distance from Quetta to the Selistan border at Killa Robat is 465 miles most of it dead level, and it has now been provided with fortified posts, dak bungalows, wells, and all facilities for caravan traffic. The railway was pushed out from Spezand, on the Bolan Railway to Nushki, so as to provide a better starting point for the caravans than Quetta. This line was extended to the Persian Frontier during the war as a military measure, but the traffic supports only two trains a week.

III—PERSIA.

From causes which only need to be very briefly set out the Persian question as affecting Indian frontier policy has receded until it is of no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left us a bitter legacy in Persia. That Agreement divided Persia into two zones of influence and the Persians bitterly resented this apparent division of their kingdom between the two Powers though no such end was in view. German agents working cleverly on this feeling established an influence which was not suspected, and when the war broke out they were able to raise the tribes in opposition to Great Britain in the South and after the fall of Kut al Amara when a Turkish Division penetrated Western Persia they exercised a strong influence in Teheran. With the defeat of Turkey and the Central Powers this influence disappeared but at that time there was no authority in Persia besides that of the British Government which had strong forces in the North West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles. It was one of the first tasks of the British Government to regularise this position and for this purpose an agreement was reached with the then Persian Government the main features of which were —

To respect Persian integrity

To supply experts for Persian administration

To supply officers and equipment for a Persian force for the maintenance of order

To provide a loan for these purposes

To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redeemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position.—We have given the main points in the Anglo-Persian agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in the Indian Year Book for 1921 page 138 et seq. It has been explained that most Persians construed it into a guarantee of protection against all external enemies. When the British troops in the north-west retired before the Bolsheviks, the Persians had no use for the Agreement and

it soon became a dead instrument. It was finally rejected and the advisers who wrote to have assisted Persia under it withdrew.

A remark frequently heard amongst soldiers and politicians in India after the War was that Great Britain must take an active hand in Persia because she could not be a passive witness to chaos in that country. The view always taken in the Indian Year Book was that the internal affairs of Persia were her own concern. If she preferred chaos to order that was her own look out but left alone she would hammer out some form of Government. That position has been justified. The Sirdar Sipah, or commander in chief, a rough but energetic soldier gradually took charge of Persian affairs and established a thinly veiled military dictatorship which made the Government feared and respected throughout the country for the first time since the assassination of Shah Nasir ed-din. A body of capable Americans under Dr. Millsaugh restored order to the chaotic finances. These two forces operating in unison gave Persia the best government she had known for a generation. But the Sirdar Sipah chafed under the irregularities of his position with a Shah spending his time in Europe and wasting the resources of the country. He moved to have his position regularised by the deposition of the absentee Shah and his own ascent of the throne. At first he was defeated by the opposition of the Mollahs, but in 1925 prevailed when the Shah was formally deposed and the Sirdar Sipah chosen monarch in his place. The change was made without disturbance and Persia entered on a period of peace and consolidation which has removed it from the disturbing forces in the post-war world. Throughout the year considerable progress was made with the reform of the administration and many projects are afoot for the improvement of communications, which is the greatest need of the land such as an air service to Teheran and railway construction. The least reassuring episode of the year was the departure of the American financial mission which had done admirable work in the restoration of the finances. When their contract expired Dr. Millsaugh and his colleagues were offered a renewal of it on terms which they did not regard as satisfactory especially in regard to the powers they were to exercise. They therefore withdrew from the country. At the close of the year there was some talk of the replacement of Dr. Millsaugh by another foreign expert on a short term contract, but no definite steps had been taken.

Sir Percy Lorraine assumed office as British Minister at Teheran in December 1921.

IV—THE PRESENT FRONTIER PROBLEM

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between India and Afghanistan was settled, and it was delimited in 1903 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width extending from the Gomal Pass in the south to Kashmir in the north this is generically known as the Independent Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin in whom Afghan, Tartar, Turkoman, Persian, Indian, Arab and Jewish intermingled. They had lived their own lives for centuries with little intercourse even amongst themselves, and as Sir Valentine Chitral truly said "the only bond that ever could unite them in common action was the bond of Islam. It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is the desire to be left alone. They value their independence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade by service in the Indian Army or in the Khasadar or else in the outset which hill men all the world over have utilised from time immemorial, the raiding of the wealthier and more peaceful population of the Plains."

Frontier Policy

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire factor. In the half century which ended in 1897 there were nearly a score of punitive expeditions each one of which left behind a legacy of distrust and which brought no permanent improvement in its train. The fruit of the suspicion thus engendered was seen in 1907. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secre-

tary of State for India, which prescribed for the Government the "limitation of your interference with the tribes so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our imperial interests to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province.

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab a province whose head is busied with many other concerns. Lord Curzon created in 1901 the North West Frontier Province and placed it in charge of a Chief Commissioner with an intimate frontier experience directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next Lord Curzon withdrew the regular troops so far as possible from the advanced posts and placed these fortresses in charge of tribal levies offered by a handful of British officers. The most successful of these was the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian Railway system. In pursuance of this policy frontier railways were run out to Dargal, and a narrow-gauge line since converted to the broad-gauge, was constructed from Kohat-garh to Kohat at the entrance of the Kohat Pass and to Thal at the mouth of the Kurram Valley. These railways were completed by lines to Tonk and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade, and the Lower Swat Canal converted fractious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (q v Irrigation). Now it is completed there are other works awaiting attention. For many years this policy was completely justified by results.

A New Policy

It saved us from serious complications for nearly twenty years although the position could never be said to be entirely satisfactory particularly in Waziristan, peopled by the most reckless raiders on the whole border-line with a bolt hole into Afghanistan when pressed from the British side. It endured throughout the war and did not break

down until the Amir of Afghanistan sought refuge from his internal troubles in a jihad against India. In this insane enterprise the Afghans placed less reliance in their regular troops, which have never offered more than a contemptible resistance to the British forces than in the armed tribesmen. In this they were justified, for the most serious fighting was with the tribesmen. The tribal levies collapsed with almost universal swiftness. The Southern Waziristan Militia broke and there was serious trouble throughout the Zhob district. The Afridis, our most serious enemies in 1897 and the most powerful of the tribes on the North West Frontier remained fairly quiet throughout the actual hostilities with Afghanistan, but later it was necessary to take measures against a leading malcontent and destroy his fort at Chora. But the Mahauds and the Waziris broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west and by the districts of Bannu and Dehra Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 80,000 warriors 75 per cent armed with modern weapons of precision, they constituted formidable adversaries. They refused to make peace even when the Afghans caved in. They rejected our terms and active measures were taken against them. The fighting was the most severe in the history of the Frontier. The Mahauds fought with great tenacity. Their shooting was amazingly good. Their tactics were admirable, for amongst their ranks were many men trained either in the Militia or in the Indian Army and more than once they came within measurable distance of considerable success. They were assisted by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own undoing. Their losses were the heaviest in the long history of the Borderland and when the Mahauds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

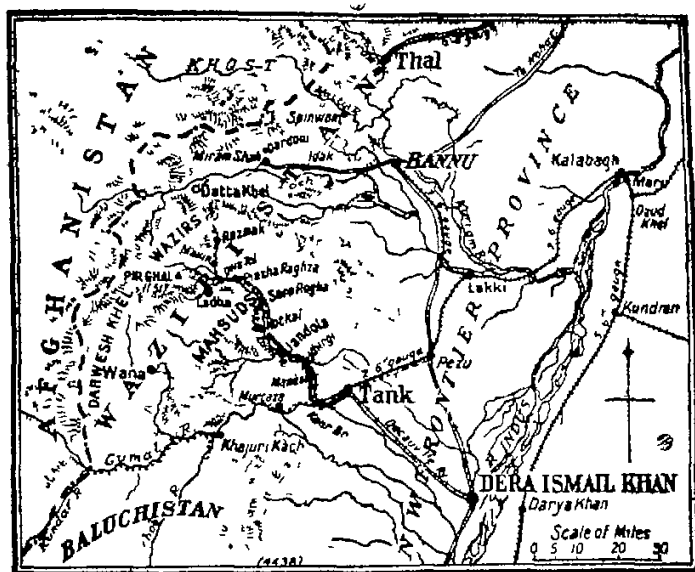

A New Chapter—As the result of the Afghan War of 1919 Indian frontier policy was again thrown into the melting pot. There was much vague discussion of the position in the course of the months which followed the Afghan War and the troubles in Waziristan which succeeded it but this discussion did not really come to a head until February March 1922. The Budget then presented to the country revealed a serious financial position. It showed that despite serious increases in taxation, the country had suffered a series of deficits, which had been financed out of borrowings. Further heavy taxation was proposed in this Budget but even then the equilibrium which the financial authorities regarded as of paramount importance was not attained. When the accounts were examined it was seen that the heaviest charges on the exchequer were those under Military Expenses and that there was an indefinitely large and seemingly unending expenditure on Waziristan. This forced the Military, and allied with it the Frontier, expenditure to the front. In actual practice the discussion is really focussed on

Waziristan. In essentials it is the aged controversy—shall we deal with this part of the Frontier on what is known as the *Supremacy* system, namely, by occupying commanding posts within the country itself, dominating the tribesmen but interfering little in their own affairs or shall we revert to what was known as the *close border* system as modified by Lord Curzon of withdrawing our regular troops to strategic positions outside the tribal area, leaving the tribesmen, organised into militia to keep the passes open, and punishing the tribesmen by expeditions when their raiding propensities become unbearable.

The Curzon Policy—The Curzon policy, adopted in 1899 to clear up the aftermath of the serious and unsatisfactory Frontier rising in 1897 was a compromise between the "occupation" and the "close border" policies. It was based on the withdrawal of the regular troops so far as possible to cantonments in rear whilst the frontier posts, such as those in the Tochi at Wana and in the Khyber and Kurram were held by militia recruited from amongst the tribesmen themselves. The cantonments for regular troops were linked so far as possible with the Indian railway system so as to permit of rapid reinforcement. But it must be remembered that like all Frontier students, Lord Curzon did not regard this as the final policy. He wrote in the Memorandum formulating his ideas "It is of course inevitable that in the passage of time the whole Waziri country up to the Durand line will come more and more under our control. No policy in the world can resist or greatly retard that consummation. My desire is to bring it about by gradual degrees and above all without the constant aid and presence of British troops. The Curzon policy though it was not pursued with the steadfastness he would have followed if he had remained in control, gave us moderate—or rather it should be said bearable—frontier conditions until the Afghan War. It then broke down, because the tribal militia, on which it was based could not withstand the wave of fanaticism and other conditions set up by the Afghan invasion of 1919. The Khyber militia faded away the Waziri militia either mutilated as at Wana, or deserted. The pillar of the Curzon system fell in the military phrase of the hour. It could not stand the test of religious fanaticism or an Afghan War. The very word Militia became anathema.

The Policy—The new policy adumbrated to meet these changed conditions was outlined by Lord Chelmsford, the then Viceroy, in a speech which he addressed to the Indian Legislatures. He said it had been decided to retain commanding posts in Waziristan, to open up the country by roads to extend the main Indian railway system from its then terminus, Jamrud, through the Khyber to the frontier of Afghanistan and to take over the duties of the Militia by regular troops. That immediate policy was soon modified so far as the garrisoning of these frontier positions by regular troops was concerned. Such duties are immensely unpopular in the regular army, which is not organised and equipped for work of this character. Irregulars have always existed on the frontier, and as they had disappeared with the Militia, it was necessary to recreate them.

WAZIRISTAN

The new form of irregular was what have been called *Khasadars* and *Boots*. The *Khasadar* is an extremely irregular irregular. He has no British officers and no uniform except a distinguishing kind of *pagri*. In contradistinction to the old *Miltia* he finds his own rifle. As one informed observer remarked, the beauty of the system is that so long as the *Khasadars* under their own headmen secure the immunity of the caravans and perform their other police duties, they draw their pay and no questions

are asked. If they desert in the day of trouble, they lose their pay but the Government loses no rifles nor does it risk mutiny or the loss of British and Indian officers. But the application of this policy produced an acute controversy. It was one thing to say that commanding posts in Waziristan should be retained. It was another to decide what these posts should be. We must therefore consider the special problem of Waziristan.

V—WAZIRISTAN

We can now approach the real frontier question of the day the future of Waziristan. What follows is drawn from an admirable article contributed to the January number of "The Journal of the United Service Institution of India," written by Lt Col G M Routh, D.S.O.

Geographically Waziristan is a rough parallel belt averaging 30 miles from East to West and 160 from North to South. The western half consists of the Sulaiman Range gradually rising up to the ridge from five to ten thousand feet high which forms the watershed between the Indus and the Helmand Rivers and corresponds with the Durand Line separating India from Afghanistan. This is the western boundary. On the east is the Indus. North is the watershed of the Kurram River running East and West about 30 miles north of Bannu separating Waziristan from the Kohat District. South is a zigzag political boundary from the Durand Line running between Wana and Fort Sandeman in Baluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable medley of ridges and ravines struggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are our outposts of Wana and Ladhra some 15 and 20 miles respectively from the Durand Line, in the centre of the grazing district, the latter within five miles of important villages of Ranigum and Makin.

The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sandy desert in the Marwat above Peshawar.

Where irrigation or river water is obtainable cultivation is attempted under conditions which can hardly be encouraging. Other tracts like that between Pesu and Tank usually pastoral, can only hope for an occasional crop after a lucky rainfall.

Inhabitants—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours. The name originates according to tradition from one Wazir two of whose grandsons were the actual founders of the race. Of the four main tribes Darweshkhel, Mahsuds, Dawars and Batanul, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately and inter marriage is the exception—in fact all traditionally are in open strife, a circumstance which until some bright political comet like the Afghan War of 1919 joined them together, as materially aided our dealings with them.

Unlike other parts of India, however these wild people acknowledge little allegiance to *maliks* or headmen. No one except perhaps the Mulla Powindah till his death in 1912 could speak of any portion of them as his following.

Policy—The policy of the British was at first one of non interference with the tribes. Even now only part of the country is administered. Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with *Regulars* followed by building posts and brick towers to be held by *Miltia*. These posts were at first placed at the points where raiders usually debouched. The Political Officers at first supported by *Regulars* built up from 1904 onwards a force of some 3 000 *Miltia* which British Officers at their disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, prevention of raids and surrender of offenders when required, also for tribal escorts as necessary. Gradually, as occasion required, posts were occupied. Wana was occupied in 1896 at the request of the Wana Wazirs. Similarly the Tochi in 1896. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the vain hope of taming the Mahsuds. It was hoped the various posts would prove a pacifying influence and a rallying ground for Government supporters. From 1904 to 1919 they were held by *Miltia*. Roads and communications were improved and tribal allowances augmented by sales of produce to the troops on a liberal scale.

A Programme—Lt Col. Routh than outlined a possible policy for Waziristan. We give it textually because we believe it substantially reflects military opinion in India—

To the unprejudiced mind it appears more practical to grasp the nettle firmly and dominate the inhabited tracts. Why should not the road now being made to Ladhra be continued 30 miles north to the Tochi road at Datta Khel and 20 miles south to Wana? Why should we not occupy the healthier portions of Waziristan rather than the foothills or Cis-Indus zones? The Bazmak district round Makin 6 000 feet up is both healthy and fertile. The same applies to the Shawal valley lying behind Pir Gai, the national peak near Ladhra rising to a height of 11,566 feet above the sea. The Wana plain 5,000 feet up 30 miles by 15 could with railways support an army corps; there is no doubt that a forward railway policy will help to solve the problem. A line has been surveyed from

Tank to Drabon and thence up the valley to Fort Sandeman so connecting with the Zhob and perhaps later to Wana. The Gomal Tanai from Murtaza to Khajuri Kach is the apparently obvious route but would be prohibitively expensive in construction and require much tunnelling. Beyond Khajuri Kach *viz* Tanai and Rogha Kot to Wana some 23 miles offers no difficulty. The old policy of the raiders working westwards and our retributive expeditions stretching their very temporary tentacles eastwards seems to suggest better lateral communications. The broad gauge at Kohat might without undue cost be extended to Thal and thence to Idak *viz* Spinwam. From here till further extension proved desirable a motor road through Bazmak, Makin and Dwatol to link up with that now surveyed to Ladha sounds possible to the looker on. Eventually such communications, road rail or both could continue to Wana. Fort Sandeman and Quetta *viz* Hindu Bagh a strategic line offering great defensive possibilities substituting Bazmak, which resembles Ootacamund and healthy uplands for the deadly fever spots now occupied. The very fact of employing the tribesmen on these works with good pay and good engineers tends to pacify the country as well as providing healthy accessible hill stations in place of the proverbially comfortless cantonments which now exist in this part of the Frontier.

The Compromise.—The new policy which has been called the half forward policy was announced in 1923. It was a compromise between the two extreme schools of thought.

This involved the completion of various roads fit for mechanical transport within Waziristan and along the Dera-Jalot border, the holding of certain posts, Jandola and Basmal, by Beguist troops until this road programme was completed, and thereafter the liquidation of Scouts, who are *mutato nomine* militia at certain points on the roads within Waziristan, assisted by *Khassadars*, or local levies, finding their own arms and led by their own leaders.

Results.—The official view of the working of the new system is strongly optimistic. It is that since May 1st, 1925 Waziristan is in the happy position of having no history. The Mahsuds have discovered that if the new military roads lead into their country they also lead out of it, and many of them are taking the opportunity of seeing something of the neighbouring districts of Banu and Dera Ismail Khan. The building of the roads enables many of the Mahsuds to acquire some money honestly, and now it is not an uncommon sight to see a Mahsul Malik accompanied by as many of his friends as can find a place driving in an old battered Ford towards Tank or Dera Ismail Khan. A promising sign is that this peaceful intercourse with the outer world is inducing in the Mahsuds a taste for the lighter episodes of social life. Of high promise is the opening of two primary schools at Karamma and Maidan. Along the whole frontier between April 1925 and the end of February 1926 only 26 raids were made into British districts as compared with that in the period immediately following 1919 when within three years 1196 raids into British India were made.

VI—AFGHANISTAN

The relations of Afghanistan with the Indian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at All Baid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up if necessary to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the trans frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Selistan. It was the purpose of British policy to close them, and of Russia to endeavour to keep

them at any rate half open. To this end having pushed her trans-Persian railway to Samar-kand, Russia thrust a military line from Merv to the Kushkinsky Post where railway material is collected for its immediate prolongation to Herat. Later she connected the trans-Siberian railway with the trans-Caucasian system by the Orenburg-Tashkent line thus bringing Central Asia into direct touch with her European magazines. Nor has Great Britain been idle. A great military station has been created at Quetta. This is connected with the Indian railway system by a line of railway which climb to the Quetta Plateau by the Yolan Pass and through the Thapper Rift lines which rank amongst the most picturesque and daring in the world. From Quetta the line has been carried by the Kbojak tunnel through the Khwaja Amru Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar or the direct route through Selistan.

Further east the Indian railway system was carried to Jampur later up the Khyber Pass to Landi Kotal. A first class military road sometimes double, sometimes treble, threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan frontier at Landi Khana. Later a commercial line was made with the Lori Shikhan Railway, which, starting from Peshawar was designed to penetrate the Mulla-yori country and provide an alternative advance to the Khyber for the movement of British troops for the defence of Kabul. For unexplained reasons, this line was suddenly stopped and is now thrust in the air. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India.

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it has largely succeeded. When the late Abdur Rahman was invited to ascend the throne as the only means of escape from the tangle of 1878, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdur Rahman made himself master in his own kingdom. By means into which it is not well closely to enter, he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year increased to eighteen by the Durand Agreement of 1893 and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission, which nearly precipitated war over the Panjdeh episode in 1885—determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Sistan. It was estimated by competent authorities that about the time of Abdur Rahman's death Afghanistan was in a position to place in the field, in the event of war one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong it was not made friendly. Abdur Rahman Khan distrusted British policy up to the day of his death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice he would have opposed a Russian

advance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St. James.

Afghanistan and the War—These relations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the trite sayings of the Frontier that the system which Abdur Rahman Khan had built up would perish with him, for none was capable of maintaining it. Habibullah Khan more than maintained it. He visited India soon after his accession and acquired a vivid knowledge of the power and resources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but they must trust him, certainly his reception of Turkish, Austrian and German missions at Kabul at a time when British representatives were severely excluded was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people inflamed by the Turkish preaching of a jihad or holy Islamic war. But he committed no act of hostility as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified, he had kept Afghanistan out of the war, he had adhered to the winning side, his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir—It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919. The circumstances surrounding his murder have never been fully explained, but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come, they anticipated it by snuffing one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element was proclaimed Amir at Jalalabad in his stead but public opinion in Afghanistan revolted at the idea of the brother seeking power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at

Kabul, controlling the treasury and the arsenal and supported by the Army Naeraliah found it impossible to make head against him and with drew. The new Amir Amanullah at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties at once commenced, he had to deal with the war party in Afghanistan, he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibullah had been dealt with the fanatical element was exasperated by the imprisonment of Naeraliah and the Army was so incensed that it had to be removed from Kabul and given occupation to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlett Act was at its height. The disturbances in the Punjab and Gujarat had taken place. Afghan agents in India of whom the most prominent was Ghulam Hyder Khan the Afghan postmaster at Peshawar flooded Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes on whom the Afghans placed their chief reliance.

Speedy Defeat.—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dacca. Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling they tried to water down the conditions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which is set out in the Indian Year Book 1923, pp 196-197.

Post War Relations.—It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards. During the hot weather of 1920 there were prolonged discussions at Muzoorie between Afghan Representatives and British officials under Sir Henry Dobbs. These were private but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul where a peace treaty was signed.

The main points of the Treaty are set out in the Indian Year Book, 1923, pp. 197, 198-199.

Afghanistan after the War.—Since the War the relations between Afghanistan and Great Britain have been good and improving. There were painful episodes in 1923 when a murder gang from within Afghanistan committed raids in British India, murdering English people and kidnapping English women. In course of time this gang was broken up. His Majesty the King of Afghanistan has had troubles within his own borders which have made him glad of British help. The main object of his government has been to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no changes are popular especially violent was the opposition to a secular form of administration and education. The direct result was a formidable rebellion of Mangals and Zadran in the Southern Provinces and serious reverses to the regular troops sent against the rebels. At one time the position was serious but the rebels were not sufficiently united to develop their successes and with the aid of aeroplane and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated the whole business gave a serious set-back to the reforms initiated by His Majesty. He had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force.

Bolshevik Penetration.—Taking a long view a much more serious development of the policies of Afghanistan was the penetration of the Bolsheviks. These astute propagandists have converted the former Trans Caspian States of Tsarist Russia into Soviet Republics, where the rule of the Bolsheviks is much more drastic and disruptive than was that of what was called the despotism of the Romanoffs. The object of this policy is gradually to sweep into the Soviet system the outlying provinces of Persia of China and of Afghanistan. In Persia this policy has been foiled by the vigour of the Sipar Salah Reza Khan since declared Shah. In Chinese Turkestan it is pursued with qualified success. In Afghanistan it has made certain progress. The first step of the Bolsheviks was to extend the Soviet Republics of Tajikistan, Uzbekia and Turkmenistan so as to absorb all Northern Afghanistan. This has apparently been abandoned for the moment for a more gentle penetration. Large subsidies, mostly delivered in kind have been given to Afghanistan. Telegraph lines are being erected all over the country roads are being constructed, large quantities of arms and ammunition are being supplied whilst an air force with Russian pilots and mechanics has been created and is in process of development. In return the Bolsheviks have received important trading facilities. The whole purpose of this policy is ultimately to attack Great Britain in India through an absorbed Afghanistan.

It is very doubtful if the Amir and his advisers were deceived by these practices and whether they did not pursue the simple plan of taking all they could get without the slightest intention of handing themselves over to the Bolsheviks. But it is easier to let the Bolshevik in than to get him out, friends of the Afghans were asking.

themselves whether the Amir was not nourishing vipers in his bosom. Towards the end of 1925 and in the early part of 1926 there was a rude awakening. The Northern Frontier of the country has always been unsettled because of the shifting courses of the Oxus. In December Bolshevik forces captured with violence the Afghan post of Darabad killing one soldier; these events aroused great indignation at Kabul and were denounced by the Amir *coram publico*. There is no little evidence to show that though the form of government has changed in Russia the aims of Russian policy are the same. It used to be said that the test of Russian good faith under the Anglo-Russian Agreement would be the attitude of Petrograd towards the extension of the Orenberg-Tashkent railway to Termez. That line has been constructed by the Bolsheviks. The Afghans have had their eyes opened with what results remains to be seen.

Russo Afghan Treaty—Outwardly the relations between the two States are friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soviet Russia, which was signed on August 31st but it provided that it should in no way interfere with the secret treaty signed in Moscow on February 24th 1921. The principal clauses of this treaty as disclosed in the Afghan papers are as follows—

Clause 1.—In the event of war or hostile action between one of the contracting parties and a third power or powers the other contracting party will observe neutrality in respect of the first contracting party.

Clause 2.—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions also they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and military agreements with any one or more other powers against each other. Each will also abstain from joining any boycott or financial or economic blockade organized against the other party. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties the other contracting party will not help such hostile policy and further will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3.—The high contracting parties acknowledge one another's Government as

rightful and independent. They agree to abstain from all sorts of armed or unarmed interference in one another's internal affairs. They will decidedly neither join nor help any one or more other powers which interfere in or against one of the contracting Government. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's independence or otherwise such activities will be checked. Similarly neither of the contracting parties will allow armed forces, arms, ammunition or other war material, meant to be used against the other contracting party to pass through its dominions.

Clause 6.—This treaty will take effect from the date of its ratification which should take place within three months of its signature. It will be valid for three years. After this period it will remain in force for another year provided neither of the parties has given notice six months before the date of its expiry that it should cease after that time.

On March 23rd there was also signed in Berlin a treaty between Germany and Afghanistan which amounted to no more than the establishment of diplomatic relations.

A British Minister is established in Kabul as well as the representatives of other European States. The representatives of Afghanistan are established in India and in London and at some of the European capitals. The various subsidiary agreements under the Treaty have been carried into effect.

The recent history of Afghanistan is a record of recuperation and development. The country has recovered from the Khosr rebellion which seriously impaired the finances and His Majesty the King is steadily raising the standard of the administration and improving means of communication. Several projects for new telegraph lines and roads are afoot and there is an increasing motor traffic between Afghanistan and India. In December 1927 His Majesty the King embarked on his first foreign tour. He left Afghanistan for India journeying from the frontier to Karachi and thence by sea to Bombay where he had an enthusiastic popular reception. He sailed on December 17th for Egypt whence he intends to visit England and the Continent and to return to Kabul by way of Russia.

British Representative—Major Humphreys

VII—TIBET

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication

with that country were not, of course inspired by this apprehension. When in 1774 Warren Hastings despatched Bogie on a mission to the Tashi Lama of Shigatse, the spiritual equal,

if not superior of the Dalai Lama of Lhasa—his desire was to establish facilities for trade to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hastings' departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans but it was abandoned in deference to the opposition of the Chinese whose suzerainty over Tibet was recognised and to whose views until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive and with a view to putting an end to an intolerable situation a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontiers. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier to which British subjects should have the right of free access and where there should be no restrictions on trade. The agreement proved useless in practice because the Tibetans refused to recognise it and despite their established suzerainty the Chinese Government were unable to secure respect for it.

Russian Intervention

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities. Three letters which he addressed to the Dalai Lama were returned unopened at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjief who had established a remarkable ascendancy in the councils of the Dalai Lama. After a few years' residence at Lhasa Dorjief went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission, of which the head was officially described in Russia as the senior Tsamtse Khomba attached to the Dalai Lama of Tibet. This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjief returned to Lhasa to report progress and in 1901 was at St. Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjief had on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1904.

In view of these conditions the Government of India, treating the issue of Chinese suzerainty over Tibet as a constitutional question, proposed in 1903 to despatch a mission, with an armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government, to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility and there was fighting at Tuna, and several sharp encounters in and around Gyantse. It was therefore decided that the mission should advance to Lhasa and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the Chinese Convention of 1890, to open trade marts at Gyantse, Gartok and Yatung to pay an indemnity of 2500 000 (seventy five lakhs of rupees) the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government Intervenes

For reasons which were not apparent at the time, but which have since been made clearer, the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy five lakhs of rupees to twenty five lakhs, to be paid off in three years and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893 remained in force. The Chinese Government paid the indemnity in three years and the Chumbi Valley was evacuated. The only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

Chinese Action.

The sequel to the Anglo-Russian Agreement was dramatic although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion and one of Sir Francis

Youngkhusang a great difficulty was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a constitutional action, it was inevitable that China should take steps to see that she had the power to make her will respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh-feng Acting Viceroy in the neighbouring province of Szechuen was appointed Resident in Tibet. He proceeded gradually to establish his authority marching through eastern Tibet and treating the people with great severity. Mean time the Dalai Lama finding his presence at Urga, the seat of another Buddhist Pontiff, who had taken refuge in 84ning. Thence he proceeded to Peking where he arrived in 1906, was received by the Court and despatched to resume his duties at Lhasa. Moving by devious stages he arrived there at Christmas 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa and by the irony of fate sought a refuge in India. He was chased to the frontier by Chinese troops and took up his abode in Darjeeling, while Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the representations of the Government of India made strong protests to China against this action. They pointed out that Great Britain while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order that China had no intention of converting Tibet into a province but that being responsible for the good conduct of Tibet she must be in a position to see that her wishes were respected by the Tibetans. Finally the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested, but for the revolution in China. That revolution broke out in Szechuen and one of the first victims was Chao Erh-feng. Cut off from all support from China, surrounded by a hostile and infuriated populace the Chinese troops in Tibet were in a hopeless case, they surrendered and sought escape not through China, but through

India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913 in the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration, and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Government of India, Mr. Ivan Chen representing China and Mr. Long Chen Shaira Prime Minister to the Dalai Lama, thrashed out these issues. Whilst no official pronouncement has been made on the subject it is understood that a Convention was initiated in June which recognised the complete autonomy of Tibet proper with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1915 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuen went over to the South the Central Government at Peking was unable to finance the frontier forces or to withstand the Tibetan advance which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuen marches, hostilities were suspended and an armistice was concluded.

From what has gone before it will be seen that the importance which formerly attached to the political condition of Tibet was much less a local than an external question and was influenced by our relations with Russia and China rather than with our relations with Tibet. Russia having relapsed into a state of considerable confusion and China having relapsed into a state of absolute confusion these external forces have disappeared and Tibet no longer looms on the Indian political horizon. The veil has been drawn afresh over Lhasa and affairs in that country pursue an isolated course with this considerable difference. The Dalai Lama is now on terms of the greatest cordiality with the Government of India. In 1920 he requested that a British officer should be sent to discuss with him the position in Central Asia brought about by the Revolution in Russia and the collapse of Government in China, and Mr. Bell C.M.G. I.C.S. Political Officer in Sikkim was deputed for this purpose. In 1922 telephonic communication between Lhasa and India was established.

British Trade Agent, Gyantse.—A. J. Hopkinson.

British Trade Agent, Yaktung.—A. J. Hopkinson.

VIII—THE NORTH EASTERN FRONTIER.

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Nepal, Sikkim and Bhutan. From Chitral to Gilgit now the northernmost posts of the Indian Government, to Assam with the exception of the small wedge between Kashmir and Nepal where the British district of Kumaon is thrust right up to the confines of Tibet, for a distance of nearly fifteen hundred miles there is a narrow strip of native territory between British India and the true frontier. The first of these frontier States is Kashmir. The characteristics of this State are considered under Indian States (q.v.) It is almost the only important Native State in India with frontier responsibilities and it worthily discharges them through the agency of its efficient Indian State troops—four regiments of infantry and two Mountain Batteries, composed mainly of the Rajput Dogras, who make excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladakh then we come to the long narrow strip of Nepal. This Gurkha State stands in special relation with the British Government. It is for all practical purposes independent, and the British resident at Kathmandu exercises no influence on the internal administration. The governing machine in Nepal is also peculiar. The Mahara Dhiraj who comes from the Sessodia Rajput clan the bluest blood in India takes no part in the administration. All power vests in the Prime Minister who occupies a place equivalent to that of the Mayors of the Palace or the Shoguns of Japan. The present Prime Minister Sir Chandra Shamsar has visited England and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent, and in the eighteenth century the Chinese marched an army to the confines of Kathmandu—one of the most remarkable military achievements in the history of Asia. Under the firm rule of the present Prime Minister Nepal has been largely free from internal disturbance and has been raised to a strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of Bhutan and Sikkim whose rulers are Mongolian by extraction and Buddhist by religion. In view of Chinese aggression in Tibet the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year and making a guarantee that Bhutan would be aided by them in its foreign relations. After China was officially notified that Great Britain would protect the rights and interests of these States. At the request of the Nepalese Government a British railway expert was invited to visit the country and advise on the means of improving communications with

India. As the result of his report the Nepalese Government have decided to construct a light railway from Rhipchakhori to Razaul. Great success has attended the efforts of the Nepalese Government to abolish slavery.

Assam and Burma.

We then come to the Assam border tribes—the Dasas, the Miris, the Abors and the Mishmis. Excepting the Abors none of these tribes have recently given trouble. The murder of Mr. Williamson and Dr. Gregerson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N.E. frontier. A force of 2,500 and about 400 military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murderers were felled up. The cost of the expedition was Rs. 21,60,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-dwelling and leech infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagas, the Tibeto-Burman people, devoted to the practice of head hunting which is still vigorously prosecuted by the independent tribes. The Chin Hills is a tract of mountainous country to the south of Manipur. The corner of India from the Assam boundary to the northern boundary of the Shan States is for the most part included in the Myitkina and Bhamo districts of Burma. Over the greater part of this area a labyrinth of hills in the north no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilization is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. There is a considerable trade with China through Bhamo. On the Eastern frontier of Burma are the Shan States with an area of fifty thousand square miles and a population of 1,800,000. These States are still administered by the Sawbwas or hereditary chiefs subject to the guidance of Superintendents and Assistant Superintendents. The Northern Shan Railway to Lashio opened in 1903 was meant to be a stage in the construction of a direct railway link with China, but this idea has been put aside for it is seen that there can never be a trade which would justify the heavy expenditure. The Southern Shan States are being developed by railway connection. The five Karen States lie on the frontier south of the Shan States. South of Karen is the frontier runs between Shan and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent. A notable humanitarian development of recent years is the success of the measures to abolish slavery in the Hukawng Valley. In this remote tract in the north-east of Burma a mild system of slavery existed but in response to the initiative and pressure of British officers they were all freed by April 1920.

Railways to India.

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1885 for a line of 1,000 miles from Cairo and Port Said to Kowek, at the head of the Persian Gulf. While these projects were in the air German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway connecting India, across Persia with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in invading Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo, and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samarra.

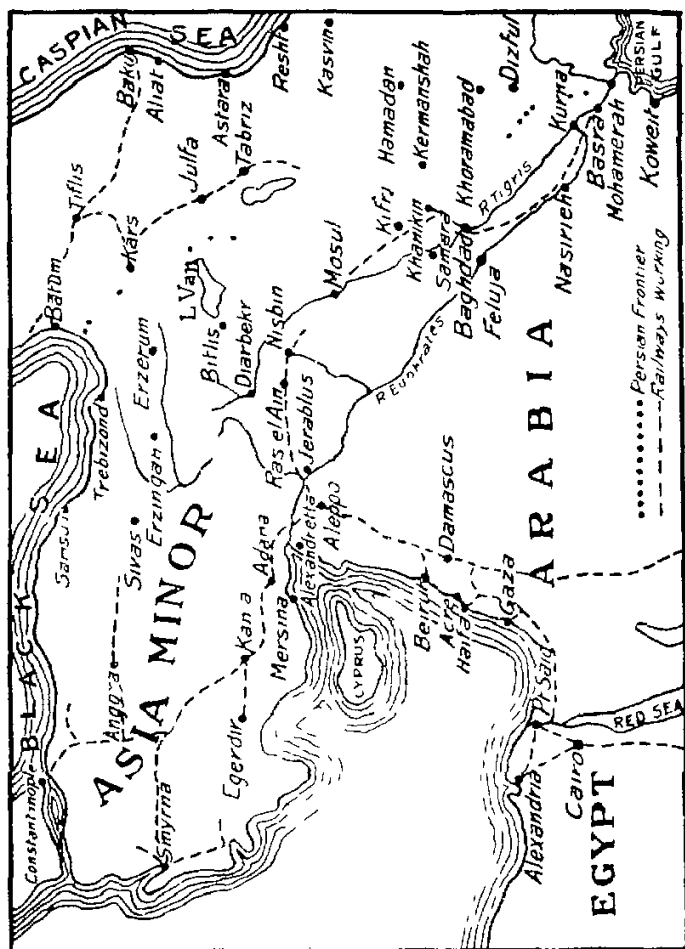

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra via Nasiriah, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-el-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses

the frontier of that country. A line branches off in the neighbourhood of Kirkir in the direction of Mosul. A line also runs westward from Baghdad to Fajila, on the Euphrates. With the Turkish Nationalists in control of Anatolia any question of the completion of the through Baghdad Line is indefinitely delayed.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the terminal of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south-east of Lake Urumia. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic but the agreement came to naught.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman. The distance between the railway heads is about 250 miles. But there have always for strategic reasons been strong military objections to the railway across Afghanistan and after the death of the late Amir Habibullah the Afghan Government flatly opposed any suggestion for carrying the Indian or Russian railway system within their borders. What the present Afghan Government think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North West Frontier does not suggest the early removal of the strategic difficulties. The completion of a broad gauge line extending the Indian railway system through the Khyber Pass to Landi Khana at its western extremity opens a prospect of further possible rail connections with Afghanistan.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf to supersede the old mule routes. Special importance has for many years been attached to schemes for a railway from Mohammerah at the opening of the Karun Valley where the Karun River runs into the Shat-el-Arab, just below Basra, northwards into the rich highland country of Western Persia where the valuable West Persian oil wells also lie. Britain has long established special relations with the Karun Valley and has a large trade there.

Foreign Consular Officers in India.

Name.	Appointment	Port
Afghanistan		
Sayed Qasim Khan	Consul General	Delhi
Muhammad Usman Khan	Consul	Bombay
Mr Bashir Ahmad Khan	Do	Karachi
Argentine Republic		
*Mr J F Barton	Vice-Consul	Calcutta.
Austria		
*Signor E Stella	Consul	Bombay

The Army

The great sepoy army of India originated in the small establishments of guards, known as *peons* enrolled for the protection of the factories of the East India Company but *sepoys* were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay and as early as 1664 the first fortified position was occupied by the East India Company at Armagon near Masulipatam. Madras was acquired in 1640 but in 1654 the garrison of Fort St. George consisted of only 500 men. In 1661 Bombay was occupied by 400 soldiers and in 1663 the number was only 285 of whom 98 were English and the rest French, Portuguese, and natives.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Duplex were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander in Chief. In Madras the European companies were developed into the Madras Fusiliers, similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Duplex had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of Independent States, owing nominal allegiance to the Emperor at Delhi had risen on the decline of the Mughal Empire, some ruled by Marhatta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the native armies, which had been organised on the Presidency system, were reorganised. The European troops were 18,000 strong and

the natives numbered some 67,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines and cavalry and artillery companies were raised.

In 1798 the Marquis Wellesley arrived as Governor General firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore where Tipu was intriguing with the French and then turned his attention to the Marhatta States in which Shadha had established power over the Mughal Emperor at Delhi by means of a large regular army offered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley afterwards Duke of Wellington the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Marhattas. Subsequently Holkar also was reduced and British power established on a firm footing.

Mutiny at Vellore.—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great outbreak of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas Expeditions.—Several important overseas expeditions were undertaken in the early part of the nineteenth century. Bourbon was taken from the French, Ceylon and the Spice Islands were wrested from the Dutch and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814 the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817 hostilities again broke out with the Marhattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The

Mahratta Chieft of Poona Nagpur and Indore rose in succession and were beaten respectively at Kirkee Sitabdi and Mehidpur. This was the last war in Southern India. The tide of war rolled to the north never to return. In the Punjab to which our frontier now extended our army came into touch with the great military community of the Sikhs.

In 1824 the armies were reorganised the double battalion regiments being separated and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery five battalions of foot artillery two regiments of European and 48 of native infantry 6 regiments of regular and 8 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines though of lesser strength.

First Afghan War and Sikh Wars—In 1839 a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measure retrieved by subsequent operations but it had a far reaching effect on British prestige. The people of the Punjab had witnessed these unfortunate operations they had seen the hostilities which never returned and although they saw also the avenging armies they no longer regarded them with their former eyes. Sikh aggression led to hostilities in 1845-46 when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshahr the opening battles but did not surrender until they had been overthrown at the battles of Aliwal and Sohraon. Two years later an outbreak at Multan caused the Second Sikh War when after an indecisive action at Chillianwala our brave or luck were finally overcome at Gujrat and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier and the Second Burmese War the first having taken place in 1824.

The conquest of the Punjab extended over frontier to the country inhabited by those turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Punjab Frontier Force was established and was constantly engaged in small expeditions while they involved little bloodshed kept the force employed and involved much arduous work.

The Indian Mutiny—On the eve of the mutiny in 1857 there were in the Bengal Army 21 000 British and 137 000 native troops. In the Madras Army 8 000 British and 49 000 native troops and in Bombay 9 000 British and 45 000 native troops. The proportion of native to British was therefore too large for safety. The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie especially that of Oudh from which the greater part of the Bengal Army was drawn, interference with the privileges of the sepoy with respect to certain allowances and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the

introduction of a new cartridge. The mahrattas of those days were supplied with a cartridge in which the powder was enclosed in a paper cover which had to be bitten off to expose the powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen and therefore unclean alike for Muhammadans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skillful agitators exploited this grievance which was not without foundation and added reports that flour was mixed with bone-dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Barrackpore where sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment their fetters being riveted on parade on the 9th May. Next day the troops in Meerut rose and aided by the mob, burned the house of the Europeans and murdered many. The troops then went off to Delhi. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive and the mutineers were allowed to depart unmolested to spread the flames of rebellion.

Delhi is the historic capital of India. On its time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. Yet Delhi was held only by a few native battalions who joined the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who mutinied in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Minor Campaigns—During the period until 1879 when the Second Afghan War began, there were many minor campaigns including the China War of 1840 the Amoy Campaign and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma several campaigns in Africa and the expeditions to Lhasa. But until 1914 since the Afghan War the army of India except that portion of the British garrison which was sent to South Africa in 1899 had little severe fighting although engaged in many arduous enterprises.

Reorganization after the Mutiny—In 1857 the East India Company ceased to exist and their army was taken over by the Crown. At this time the army was organized into three armies *vis* Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organizations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1905 the next large reorganization took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed *vis* Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme—This system lasted until 1904 when under Lord Kitchener's re-organization the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western corresponding to the Punjab, Bombay and Bengal Commands.

In 1907 Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders retention of such powers by Lieutenant Generals of Commands led to delay in the despatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops but was given no administrative responsibilities.

Early in the War both Army Commanders took the field and were not replaced until 1916 and 1917 when both had practically the same functions as their predecessors. It was now realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q. therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation *Army to Command* at this time a considerable increase was made in the administrative staffs of the two Commands and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy new principles or war.

The commands were increased to four in 1920 each under a General Officer Commanding in Chief.

Present System of Administration

The essential features of the Army, as constructed on its present basis, will be found in *The Army in India and its Evolution*, a publication issued with the authority of the Government of India in 1924.

The Secretary of State, as one of His Majesty's ministers has a special responsibility and authority in regard to the military administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by an officer of the Indian Army of high rank with recent Indian experience. The appointment is at present held

by Field Marshal Sir Claud Jacob G.C.B., K.C.S.I., K.C.M.G. who was formerly General Officer Commanding in Chief of the Northern Command and officiated as Commander in Chief from April 1925 to August 1925. The Military Secretary is assisted by one first grade staff officer selected from the Indian Army. In order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

The superintendence, direction and control of the civil and military government of India are vested in the Governor General in Council who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy's Executive Council exercise in respect of Army administration the same authority and functions as they exercise in respect of other departments of the Government in the first phase of the representative institutions conferred upon India by the Montagu-Chelmsford Reforms. Scheme Army expenditure and the direction of military policy have been excluded from the control of the Legislature.

The Commander in Chief—The next authority in the chain of administrative arrangements is His Excellency the Commander in Chief, who by custom is also the Army Member of the Viceroy's Executive Council. The appointment is held by His Excellency Field Marshal Sir William R. Birdwood G.C.B., G.C.M.G., K.C.S.I., C.I.E., D.S.O. He is also a member of the Council of State. All the work connected with the administration of the Army, the formulation and execution of the military policy of the Government of India, the responsibility for maintaining every branch of the Army, combatant and non-combatant in a state of efficiency and the supreme direction of any military operations based upon India are centred in one authority—the Commander in Chief and Army Member. In addition he administers the Royal Indian Marine and the Royal Air Force in India. The Commander in Chief is assisted in the executive side of his administration by 4 Principal Staff Officers *viz.* the Chief of the General Staff, the Adjutant-General, the Quarter Master General and the Master-General of Supply.

The Army Department—The Staff of the Army Department Secretariat consists of a Secretary who, like the Secretaries in the civil departments, is a Secretary to the Government of India as a whole, possessing the constitutional right of access to the Viceroy, a Deputy Secretary, an Establishment Officer, a Director of Military Lands and Cantonments, three Assistant Secretaries, one of whom is also Secretary of the Indian Soldiers' Board and the Officer in-charge Medical Directorate.

The Army Department deals with all Army services proper, and also the administration of the Royal Indian Marine and the Royal Air Force in India. In so far as questions requiring the orders of the Government of India are concerned, The Army Department Secretariat has no direct relations with commanders or troops or the staffs of formations subordinate to Army Headquarters. It has continuous

and intimate relations with Army Headquarters in all administrative matters and is responsible for the administration of Cantonments, the estates of deceased officers and the compilation of the India Army List. The Army administration is represented in the Legislature by the Army Member in the Council of State and by the Army Secretary in the Legislative Assembly.

The Military Council—Is composed of the Commander-in-Chief as President and the following members namely: The Chief of the General Staff as Vice President, the Adjutant-General, the Quartermaster-General, the Master-General of Supply, the Secretary to the Government of India in the Army Department and the Financial Adviser, Military Finance representing the Finance Department of the Government of India. It is mainly an advisory body constituted for the purpose of assisting the Commander-in-Chief in the performance of his administrative duties. It has no collective responsibility. It meets when convened by the Commander-in-Chief for the consideration of cases of sufficient importance and difficulty to require examination in conference. The heads of the minor independent branches of Army Headquarters and the directors of technical services attend when required.

Military Territorial Areas

Indian Territory is divided in four commands each under a General Officer Commanding in Chief. The details of the organisation are given in the table on the next page and it will be seen that Commands comprise 14 districts, 4 Independent Brigades, and 33 Brigades of which four are temporary. The Northern Command with its headquarters at Murree coincides roughly with the Punjab and North West Frontier Provinces, the Southern Command with headquarters at Poona coincides roughly with the Bombay and Madras Presidencies and part of the Central Provinces, the Eastern Command with headquarters at Nalini Tal coincides roughly with the Bengal Presidency and the United Provinces, the Western Command whose headquarters are at Quetta covers Sind, Rajputana and Baluchistan.

The General Officer Commanding in Chief of each Command is responsible for the command, administration, training and general efficiency of the troops stationed within his area and also for all internal security arrangements.

Apart from the four Commands, the only formation directly controlled by Army Headquarters is the Burma district which mainly because of its geographical situation cannot conveniently be included in any of the four Command areas. The Arakan Independent Brigade which was under the administrative control of the Government of India was transferred to the administrative control of His Majesty's Government in October 1942.

The distribution of the troops allotted to the Commands and districts has been determined by the principle that the striking force must be ready to function in war commanded and constituted as it is in peace. With this end in view the Army in India is now regarded as comprising three categories of troops:

- (1) Covering Troops,
- (2) The Field Army
- (3) Internal Security Troops

The role of the Covering Force is to deal with minor frontier outbreaks and in the event of major operations, to form a screen behind which mobilisation can proceed undisturbed. The force normally consists of 12½ infantry brigades with a due proportion of other arms.

The Field Army consists of 4 Divisions and 5 Cavalry Brigades. The Field Army is India's striking force in a major war.

Army Headquarters

The organization of the Army Headquarters with the Commander-in-Chief as the head, is founded upon four Principal Staff Officers charged with the administration of—

- (a) The General Staff Branch
- (b) The Adjutant General's Branch
- (c) The Quartermaster General's Branch
- (d) The Master-General of Supply's Branch

The General Staff Branch deals with military policy with plans of operations for the defence of India with the organisation and distribution of the army for internal security and external use, the administration of the General Staff in India, the education of Officers, the supervision of the education of Warrant and Non Commissioned Officers and men of the Army in India and Inter Communication Services.

The Adjutant General's Branch deals with all matters appertaining to the raising, organising and maintenance of the military forces, the peace distribution of the army, discipline, pay and pensions etc. Martial Military and International Law, Medical and Sanitary matters affecting the Army in India, Personal and Ceremonial Questions. The Judge Advocate General forms part of the Branch. The Director of Medical Services in India who was independent before the war is now included in the Adjutant General's Branch.

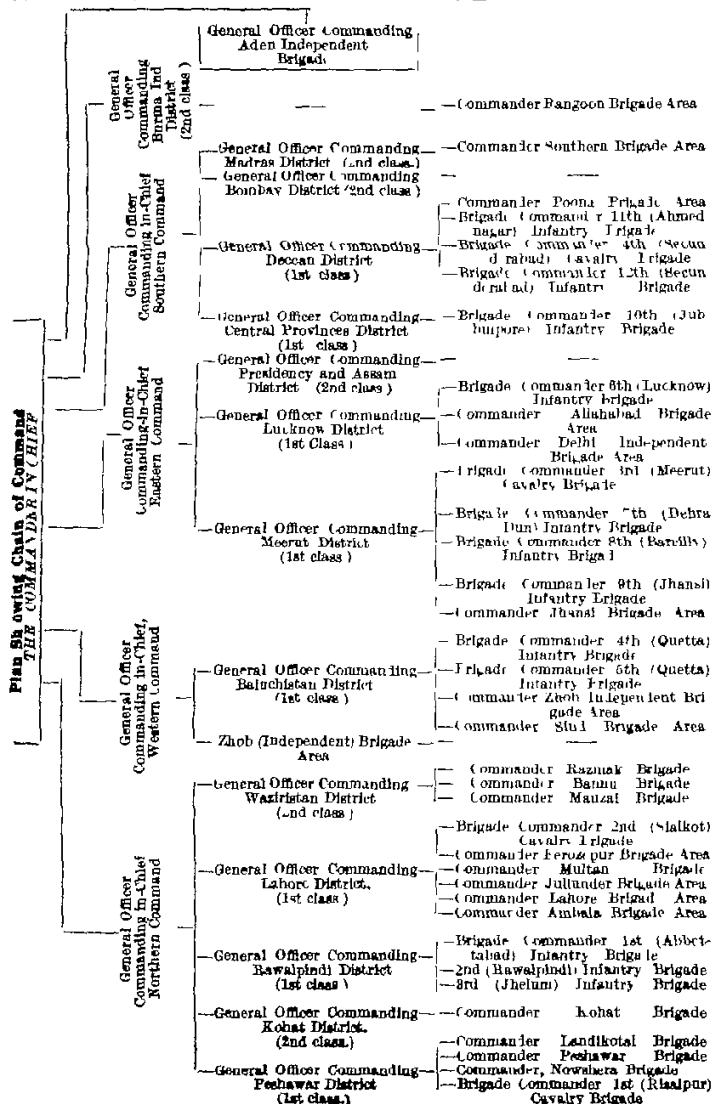

The Quartermaster General's Branch is concerned with the specification, provision, inspection, maintenance and issue of supplies i.e. foodstuffs, forage, fuel, clothing, armaments, ammunition, equipment etc. and is responsible for the following Services—Transportation, Movements, Quartering, Supply and Transport, Equipment and Ordnance Stores, Remounts and Veterinary, Garrison and Regimental installations.

The Master General of Supply's Branch controls the ordnance and clothing factories, the Military farms and conducts all matters relating to contracts in respect of food stuffs etc. and supply in bulk of clothing and necessaries, general stores and materials. The Master General is also responsible for the design, inspection and supply of guns, carriages, tanks, small arms, machine guns, chemical warfare appliances, etc. He also deals with questions regarding patents, royalties and inventions.

There are other branches of Army Headquarters administered by officers who are not classified as Principal Staff Officers but are not directly subordinate to any of the four Principal Staff Officers.

These are

- (1) The Military Secretary usually a Major General who deals with the appointment, promotion and retirement of officers holding

the King's Commission the selection of officers for staff appointments and the appointment of officers to the Army in India Reserve of Officers.

(2) The Engineer in Chief, also a Major General and head of the Corps of Royal Engineers in India. He is responsible for Engineer operations and Engineer Services during War and Peace and preparedness for War of the Engineering services. The supply of Engineer stores during War and Peace. The construction and maintenance of all military works and the constructional efficiency, accuracy and economy of all projects and designs.

In addition to the above the Army Headquarters staff includes certain technical advisers of whom the most important are the Major General Royal Artillery and the Colonel Royal Tank Corps, the Signal Officer in Chief and the Adviser and Secretary Board of Examiners.

Regular British Forces in India

The British Cavalry and British Infantry units of the army in India are units of the British service. No individual British service unit is based permanently in India. Units of the British Army are detailed for a tour of foreign service of which the major part is as a rule spent in India. In the case of British Infantry battalions the system is that one battalion of a regiment is normally on home service while the other is overseas. The tour of overseas service of a British battalion is usually 18 years. In the case of British Cavalry the same arrangement cannot be applied as one unit only comprises the regiment. The normal tour of overseas duty for a regiment of British Cavalry is 14 years. In Great Britain in peace-time units are maintained at an establishment smaller than that required for war. In India, the peace establishments exceed the war establishments in view of the fact that reserves of British personnel do not exist and reinforcements must be obtained from Great Britain.

British Cavalry—There are 6 British Cavalry regiments in India. The establishment of a British Cavalry regiment is 27 officers and 571 other ranks.

British Infantry—The present number of British Infantry battalions in India and Aden is 48 each with an establishment of 23 officers and 882 other ranks.

In 1921 an important change was made in the composition of a British Infantry battalion in India by the inclusion of a proportion of Indian combatant ranks. Battalions had always maintained a quota of Indian followers but up to 1921 the combatant personnel was entirely British. In 1921 on the abolition of the Machine Gun Corps eight machine guns were included in the equipment of a British Infantry battalion. The peace establishment of Indian combatant personnel is fixed at one Indian officer and forty one Indian other ranks. The Indian platoon as it is called, is transferred on duty to another British battalion when the battalion to which it was originally attached proceeds on relief out of India.

Royal Artillery—Indians are employed as drivers and artificers in the Royal Horse Artillery and in field and medium batteries, as drivers, gunners and artificers in pack batteries and as gunners in heavy batteries.

The peace organisation of the artillery at the present day is as follows.

Royal Horse Artillery—One brigade consisting of headquarters, three batteries and three ammunition columns, and one unbrigaded battery and ammunition column. Each battery is armed with six 13-pounder guns.

Field (Higher and Lower Establishment) Brigades—Seven brigades on the higher establishment, each consisting of headquarters and four batteries. Three brigades on the lower establishment each consisting of headquarters and four batteries. Of the seven brigades on the higher establishment four brigades consist of two batteries each armed with six 18-pounder guns and two batteries each with six 4.5" howitzers. Three brigades consist of three batteries each armed with six 8-pounder guns and one battery with six 4.5" howitzers. Of the three brigades on the lower establishment two consist of three batteries each armed with six 18-pounder guns and one battery with six 4.5" howitzers, and one brigade of two batteries armed with six 18-pounder guns and two batteries armed with 4.5" howitzers. Two guns in each battery are immobile.

Field (Reinforcement) Brigade—The reinforcement brigade consists of two double batteries each armed with six 18-pounder guns and two 4.5" howitzers.

Ammunition Columns—Two Divisional ammunition columns are maintained for the artillery of the first and second divisions, and one field ammunition column for the covering force brigade on the frontier.

Indian Pack Brigades—Six brigades, each consisting of headquarters, one British and three Indian batteries also one unbrigaded battery and one section. The British battery and two Indian batteries per brigade are armed with four 3.7" howitzers the remaining batteries are armed with four 2.75" guns. The armaments of the Frontier posts at Kohat, Fort Lockhart, Saldgi, Idak, Razmi, Dandil, Thal, Chaman, Peshawar, Hindubagh, Malakand, Shagal, Chakdara and Fort Sandeman are also manned by personnel of Indian Pack Brigades R.A.

Medium Brigades—Two brigades each consisting of one horse-drawn and two tractor-drawn batteries. In addition there are the tractor-drawn batteries two armed with 8.2" cwt. howitzers and one with 80-pounder guns on a lower establishment each with only one section mobile. For administrative purposes one of these lower establishment batteries is brigaded with each of the two Medium Brigades. The third battery (armed with 80-pounder guns) is unbrigaded. In each brigade therefore there are three tractor-drawn and one horse-drawn batteries. In one brigade the horse-drawn battery is armed with 60-pounder guns in the other with 5 howitzers.

Heavy Brigade—Headquarters and two batteries at Bombay and one battery at Karachi.

Artillery Training Centres.—One centre for Indian ranks of R. H. A. and of field and medium batteries and another centre for Indian ranks of pack batteries. These centres were created for the recruitment and training of Indian personnel.

Engineer Services.

The Engineer in-Chief.—The head of the Corps of Royal Engineers in India is directly responsible to His Excellency the Commander in-Chief. The Engineer in-Chief is not a Staff Officer, but the technical adviser of the Commander in-Chief on all military engineering matters and is responsible for

(1) Engineer operations and engineer services during war and peace
(2) The preparedness for war of the engineering services

(3) The supply of engineer stores during war and peace

(4) The execution and maintenance of all military works

(5) The constructional efficiency, accuracy and economy of all projects and designs submitted by him

The Organisation.—The Engineer organisation of the Army consists of two main branches *viz.*, the Sappers and Miners and Pioneers and the Military Engineer Services

The composition of the Corps of Sappers and Miners is as follows

King George's Own Bengal Sappers and Miners with headquarters at Roorkee. Queen Victoria's Own Madras Sappers and Miners with headquarters at Bangalore. Royal Bombay Sappers and Miners with headquarters at Kirkee. Burma Sappers and Miners, with Headquarters at Mandalay

The personnel of the Corps consists of Royal Engineer officers Indian officers holding the Viceroy's commission, a certain number of British warrant and non-commissioned officers Indian non-commissioned officers and Indian other ranks. The first three Corps are commanded by a Lieutenant-Colonel who is assisted by two Majors as Superintendents of Park and Instruction an Adjutant a Quartermaster two Subadar Majors, a Jemadar Adjutant and a Jemadar Quartermaster. The staff of the Burma Sappers and Miners is proportionately less

Field Troops are mounted units trained to accompany cavalry, and are equipped to carry out heavy bridging, demolition and water supply work. Field Companies are trained to accompany Infantry Divisional Headquarters. Companies are small units containing highly qualified tradesmen and are trained to carry out technical work in connection with field workshops. Army Troops Companies are somewhat smaller units than field companies they are required to carry out work behind divisions under the orders of Chief Engineers, *e.g.* heavy bridging work, large water supplies, electrical and mechanical installation

The Military Engineer Services control all military works in India, and Burma except in the case of a few small outlying military stations, which are in charge

of Public Works Department. They control all works for the Royal Air Force and for the Royal Indian Marine and they are charged with all civil works in the North West Frontier Province and Baluchistan under the orders, in each of these two areas of the Chief Commissioner and Agent to the Governor General. They also control civil works in Bangalore under the Mysore Government

The Engineer in Chief is assisted by a Deputy Engineer in Chief (Works) and a Deputy Engineer in Chief (Electrical and Mechanical). In each Command there is a Chief Engineer while in the Northern Command a Deputy Chief Engineer administers Military and Civil works in the N. W. F. P. and is Secretary P. W. D. to the Chief Commissioner. The Chief Engineer Western Command, is the Secretary P. W. D. to the Agent to the Governor General in Baluchistan. Both at Army Headquarters and in Commands there are Staff Officers B. E. and Technical Officers. At the headquarters of each district there is a Commanding Royal Engineer assisted in the ten 1st class districts by A. C. B. Es. Officers of the Barrack Department are also employed as District Stores Officers. Garrison Engineers are in charge of brigade areas and military stations their charges being divided into subdivisions under sub-divisional Officers. The sub-divisions are Buildings and Roads, Electrical and Mechanical and Furniture and Stores. There are sub-overseers for Buildings and Roads and the Barrack Department subordinates in charge of Furniture and Stores are assisted by storekeepers

Royal Air Force in India

The Royal Air Force in India is controlled by the Commander in-Chief in India as part of the defence services of the Indian Empire. The Air Force budget is incorporated in the Military estimates. The Commander of the Air Force the Air Officer Commanding in India is an Air Vice-Marshal whose rank corresponds to that of a Major General in the Army

The headquarters of the Air Force is closely associated with Army Headquarters and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in five branches namely air staff personnel technical stores and medical. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking the duties assigned to the divisions mentioned are those which are performed by the General Staff Branch the Adjutant-Generals and Military Secretary's branches, the Quartermaster General's branch and Medical Directorate respectively of Army Headquarters. The formations subordinate to Royal Air Force Headquarters are (1) The Wings which in their turn, comprise the squadrons of aeroplanes. (2) The Aircraft Depot (3) The Aircraft Park

The Wings.—There are three Wings in India, namely at Peshawar, Bhopalpur and Quetta. The Wing Commander is an officer with Air Force rank corresponding to the rank of Lieutenant-Colonel in the Army. He is equipped with a staff organised on the same system

as the headquarters staff of the Air Force. The Wing Headquarters establishment consists, approximately of six officers and fourteen other ranks.

The Squadrons—Of the six squadrons five are extended along the North West Frontier from Quetta to Risalpur and one is stationed at Ambala. The squadron is the primary air force unit and it consists normally of a headquarters and three flights of aeroplanes. A flight can be detached temporarily but not permanently from its squadron as repair facilities, workshops, and stores cannot economically be organised on anything lower than a squadron basis. The squadron headquarters comprises the officers and other ranks required for the command and administration of the squadron as a whole. It includes the workshop and repair units, the armouries and equipment stores of the squadron. The number of aeroplanes in a squadron varies with the type of aeroplane of which the squadron is composed but, speaking generally all squadrons on a peace basis have twelve aeroplanes i.e. four in each of the three flights.

Of the six squadrons two are equipped with De Havilland 8A aeroplanes and are allotted to distant reconnaissance and bombardment duties, the other four which are allotted to army co-operation duties, have Bristol fighter aeroplanes. The establishment of officers in a squadron consists of six officers in the headquarters and fifteen officers allotted to flying duties. This allows a reserve of one officer for each of the operative flights.

The Aircraft Depot—May conveniently be described as the wholesale store and provision department of the Royal Air Force. Technical stores from the United Kingdom are received and in the first instance held in the Aircraft Depot. It is also the main workshop and repair shop of the Force, where all engine repairs, mechanical transport repairs and aircraft repairs of any magnitude are carried out. The Depot is located at Karachi.

The Aircraft Park—Relatively to the Aircraft Depot the Aircraft Park may be described as a central retail establishment intermediate between the squadrons and the Aircraft Depot. It receives stores from the depot and distributes them to the squadron. The stocks held in the park are however usually limited to items necessary at short notice for operations and the quantities held are kept as low as distance from the depot and local conditions will admit. In war the Aircraft Park is intended to be a mobile formation in peace the Aircraft Park is located at Lahore. New aeroplanes, received from the United Kingdom are erected there but no major repairs are undertaken.

Composition of Establishments—The personnel of the Royal Air Force in India consist of officers non-commissioned officers and airmen of the Royal Air Force of the United Kingdom and Indian artificers and mechanics belonging to the Indian technical section. The officers are employed on administrative, flying and technical duties but all are required to be capable of flying an aeroplane. A proposal to employ non-commissioned officers as pilots;

has been agreed to by the Government of India and there are now six of these in India. Other airmen are employed solely on technical work. The only flying personnel who are not officers are those numbering above and a few aerial gunners who are airmen from various trades. The non-commissioned officers and airmen are employed both with squadrons and at the Aircraft Depot and Park. The personnel of the Indian technical section are employed entirely at the Depot and Park on technical trades and consist of carpenters, fitters, fabric workers, instrument repairers, machinists etc.

The total establishment consists of 228 officers, 1,740 British non-commissioned officers and airmen and 138 Indians.

In India as in the United Kingdom, the Air Force has a medical service of its own.

Regular Indian Forces

Indian Cavalry—The present number of Indian cavalry regiments is 21.

The peace establishment of an Indian cavalry regiment comprises

- 14 British officers
- 12 Indian officers
- 493 Indian non-commissioned officers and men

Indian Infantry and Pioneers—The establishment of the Indian Infantry is constituted as follows

	Battalions
20 Infantry regiments consisting of	104
3 Pioneer regiments consisting of	11
1 Independent Pioneer battalion (4th Hazara Pioneers)	1
10 Gurkha regiments consisting of	10
34	186

The normal strength of an active battalion is—

	British Officers	Indian Officers	Indian other ranks
Infantry	12	10	742
Pioneers	12	16	720
Gurkhas	13	13	920

The strength of a training battalion depends upon the number of battalions forming the regiment. The average is as follows—

Infantry—British Officers 12 Indian Officers 14 and Indian other ranks 630

Pioneers—British Officers 9 Indian Officers 11 and Indian other ranks 489

The strength of the Independent Pioneer Battalion is British Officers 13 Indian Officers 18 and Indian other ranks 923

Reserves for these units have to be sufficient to provide for an actual shortage on mobilisation as well as for the maintenance of the mobilised unit at full strength for the first 3 months after mobilisation.

Reserve—The conditions of the reserve are as follows—

(a) There are two classes in the reserve Class A and Class B. A reservist is eligible to

serve in Class A up to 8 years combined army and reserve service and in Class B up to 15 years' combined service

(b) Service in the reserve is compulsory. On enrolment a man engages to serve at least 5 years in army service and to serve up to 15 years in combined army and reserve service if required to do so

(c) Reservists will be trained for not more than 1 month annually in the cases of Class A and biennially in the case of Class B. During training the reservist will receive the full pay of a serving soldier

(d) While not under training the reservist will receive pay as follows —

Class A Rs 7 per mensem

Class B Rs 4 per mensem

(e) A reservist will be discharged from the service after 15 years combined army and reserve service when he will receive a pension of Rs 3 per mensem or if he desires it a gratuity of Rs. 800 in lieu. A reservist who is invalided from the reserve is granted a gratuity varying between 3 and 6 months pay and good conduct pay according to service

The establishment of reservists is fixed at present as follows —

Cavalry	2 943
Artillery	2 520
Sappers & Miners	1 710
Indian Signal Corps	901
Infantry	24 920
Gurkhas	2 000
Pioneers	1 240
Independent Pioneers	81
Total	27 841

The Indian Signal Corps—The Corps is organised on the same lines as a Sapper and Miner Corps, with a headquarters for recruiting and training personnel and detached field units for the various army formations. The head of the corps is the Signal Officer-in-Chief who belongs to the Royal Corps of Signals and is attached to the General Staff Branch at Army Headquarters as a technical adviser on questions connected with signals, and is also responsible for the technical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command. The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The headquarters termed the Signal Training Centre India, are located at Jubbulpore and are commanded by a Colonel assisted by a staff, British and Indian, organised on very much the same lines as the headquarters of a Corps of Sappers and Miners.

The various types of field units and the number maintained are —

Corps Signals Headquarters including Line and Wireless Company	2
Cavalry Brigade Signal Troops	4
Divisional Signals	4
Corps Signals	2
Signal Parks	2
District Signals	3
Medium Brigade Royal Artillery Signal Section	1
Field Brigade Royal Artillery Signal Section	1

In addition there is an Army Signal School which carries out the training of regimental signalling instructors

The formation of the District signals units was effected in 1926 with the transfer of communications on the North West Frontier to the Posts and Telegraphs Department. This transfer of communications also made feasible the raising of the 4 and 1 troops of Cavalry Brigade Signals to include a Wireless Section each, the formation of two Corps Signal Headquarters and the formation of one Medium and one Field Brigade Royal Artillery Signal Sections. The District Signals are located at *Prabhuwar*, *Waziristan* and *Kohat*

Royal Tank Corps—Six Armoured Car Companies arrived in India in 1921. Two more companies arrived in 1925. Two Group Headquarters were sanctioned in 1925. They are located as follows—The Northern group at *Murree*, this Group Headquarters commands Companies in the Northern and Eastern Commands. The Southern Group at *Pooza*. This Group Headquarters commands Companies in the Southern and Western Commands. There is a school at *Ahmednagar* for the training of R. T. C. personnel and the conduct of experiments. The Colonel Royal Tank Corps at Army Headquarters, acts as Technical Adviser on Tanks and Armoured Cars

The smallest tactical unit is the sub-section (Two Armoured Cars). There are two sub-sections in a section and 3 sections in a Company. Each section is commanded by a Captain or a subaltern and the Company by a Major. In addition to 12 Armoured Cars (4 in each section) there is a mechanical reserve of 4 cars on the Headquarters of each Company

5 Companies are equipped with Crossley Armoured Cars

1 Company is equipped with Rolls Royce 1921 Pattern

1 Company is equipped with Rolls-Royce 1914

1 Company is equipped with Austin Armoured Cars

With the exception of the Company with Rolls-Royce 1914 pattern which have only one Vickers Gun, all the remaining Armoured Cars are armed with two Vickers Guns.

The establishments of the Royal Tank Corps formations are shown below —

	British Officers	British other ranks	Followers	Motor cars	Motor cycles	Armoured cars	Lorries
Group Headquarters	2	2					
Tank Corps School	6	49					
Armoured Car Company	12	145	39	1	2	0	0
				2	6	16	10

Medical Services—The military medical services in India are composed of the following categories of personnel and subordinate organisations —

(a) Officers and other ranks of the Royal Army Medical Corps serving in India

(b) Officers of the Indian Medical Service in military employment

(c) The Indian Medical Department consisting of two branches, *viz.* (i) assistant surgeons and (ii) sub-assistant surgeons

(d) The Queen Alexandra's Military Nursing Service for India

(e) The Army Dental Corps

(f) The Indian Troops Nursing Service

(g) The Indian Hospital Corps

Of these categories, the officers and men of the Royal Army Medical Corps and the Army Dental Corps, the assistant surgeons of the Indian Medical Department and the Queen Alexandra's Military Nursing Service for India are primarily concerned with the medical care of British troops while the officers of the Indian Medical Service, the sub-assistant surgeons of the Indian Medical Department and the Indian Troops Nursing Service are concerned primarily with the medical care of Indian troops. The Indian Hospital Corps serves both organisations.

Civilians of miscellaneous classes employed by the Army in Waziristan are given medical treatment in military hospitals and arrangements have been made with the Headquarters of the Indian Red Cross Society for the medical treatment and care of cases amongst Indian soldiers and followers of the Indian Army for chronic diseases such as Tuberculosis, Leprosy and Diabetes.

Indian Army Service Corps and the Mechanical Transport Service—The Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period and its immediate predecessor was the Supply and Transport Corps by which name the service was known up to a short time ago. The Indian Army Service Corps is administered by the Quartermaster General, and is one of the principal services included in the Quartermaster General's Department.

The Indian Army Service Corps is constituted in two main branches, namely (a) Supply, (b) Animal transport, and is supplied

by the Mechanical Transport Service which in India is constituted upon a special basis but which is, generically, a sub-division of the Royal Army Service Corps organisation.

The strength of the establishment is shown by categories in the following table —

SUPPLY

Officers with King's commission	168
Indian officers	88
British other ranks	380
Civilians	772
Followers	2 840
Total	4 218

ANIMAL TRANSPORT

Officers with King's commissions	91
Indian officers	184
British other ranks	88
Civilians	148
Mullahar Lane, Nalks and Harwans	1 053
Indian non-commissioned officers and drivers	14 180
Artificers and followers	2 184
Total	17 887

There are also 1 094 driver reservists.

The total numbers of mules and camels maintained under the present organisation including the depots and the detachments in Aden and Kashmir are 19 747 and 5 808 respectively. There are also 747 pack and draught horses and 612 ponies. Wheeled and pack transport are combined. The company on the lower establishment represents the pre-war cadre, other companies being maintained in peace-time at full war establishment.

The mechanical transport establishment consists of the following —

Light Lorries 8 companies with 9 sections (higher establishment) 2 sections (lower establishment) and 1 section in cadre.

Apart from units and vehicles employed in the conveyance of military stores the mechanical transport service also provides motor ambulance convoys for hospitals and field medical units, and vehicles for other miscellaneous purposes. The organisation as a whole is completed by a mechanical transport depot, a central stores depot, mobile repair units and workshops of which the most important is the large heavy repair workshop constructed after the war at Chakala. Like the Indian

Army Service Corps the mechanical transport service is administered by the Director of Supply and Transport under the control of the Quarter Master-General. Exclusive of motor bicycles the total establishment now consists of 2 208 vehicles, with 982 vehicles spare and in reserve.

The mechanical transport is at present not actually a part of the Indian Army Service Corps. A scheme is however in operation by which the mechanical transport will be taken over by the Indian Army Service Corps. At present the officers of the service are mainly drawn from the Royal Army Service Corps, since at present there are no facilities in India for training officers in every branch of mechanical transport duties. The establishment of officers includes, however, a certain number of King's commissioned officers belonging to the Indian Army. The British subordinates of the service are drawn entirely from the Royal Army Service Corps. The establishment is completed by Indian officers with the Viceroy's commission and Indian other ranks of the I.A.S.C employed as drivers. A large number of Indians with non-combatant status are employed as artificers and followers. The strength and categories of the present establishments are shown in the following table—

Officers with King's commissions	132
Indian officers	36
British other ranks	399
Indian other ranks	1,427
Civilians	267
Indian artificers	1,098
Followers	666
Total	4,014

There are also 1 162 reservists

The post war establishment of the Mechanical Transport in India will be as follows—

(a) Field units—

- 8 Light M. T. Companies, consisting of 8 headquarters 9 service sections (higher establishments) 1 service sections (lower establishments) and 1 sections in cadre

- 10 M. T. Companies for motor ambulance convoys

4 Mobile repair units

(b) Maintenance units—

- 1 Heavy Repair shop
- 3 Medium Repair Shops.
- 1 Central M. T. Stores Depot.

(c) Miscellaneous—

- 3 M. T. group headquarters, M. T. technical inspectorate 1 M. T. depot for training Indian drivers and Aden M. T. Section.

The Ordnance Services which are partly under the Q.M.G. and partly under the M.G.S. may be broadly described as the agency whose duty it is to supply the army with munitions of war such as small arms guns ammunition and other equipment of a technical military character and also under an

arrangement introduced in recent years, with clothing and general stores other than engineering stores. A central disposals organisation is in operation under the control of the Quarter Master-General of Supply to dispense with the Surplus Stores and waste materials of the different services of the Army and the Royal Air Force in India to the best advantage of the State.

Army Remount Department—The following are among the most important duties imposed on the remount service—(1) The mounting of the whole of the mounted services in India. (2) The provision of camels and draught bullocks for all units and services. (3) The maintenance of some 65 000 animals. (4) The enumeration throughout India of all animals available for transport in war. (5) The animal mobilisation of all units, services and departments of the army. (6) A general responsibility for the efficiency of all the animals of the army both in peace and war. (7) The administration of the remount squadron formed in 1922 as a nucleus for expansion into three squadrons on mobilisation. (8) Breeding operations of a direct character and a new horse-breeding area which comprises the three civil districts of Multan, Montgomery and Dera Ghazi Khan and will include the breeding grants in the lower Bari Doab Canal Colony.

The department is organised on lines corresponding to the remount service in the United Kingdom. Its composition is as follows: The Remount Directorate at Army Headquarters consisting of one Director, a Deputy Director and a Staff Captain 4 Remount officers, one attached to each Command Headquarters, 6 Superintendents of Remount Depots, 8 District Remount officers of horse-breeding areas and the Ahmednagar Stud 15 Assistant Remount officers and 8 Veterinary officers.

Veterinary Services in India—The Veterinary Services are responsible for the veterinary care in peace and war of mounted British troops Indian cavalry and artillery I A S C units the remount department (excluding horse breeding operations), etc. The Veterinary Services include The establishment of Royal Army Veterinary Corps officers, serving on a tour of duty in India. The establishment of warrant and non-commissioned officers, India Unattached List and Veterinary Assistant Surgeons of the Indian Army Veterinary Corps.

The Indian Army Veterinary Corps is organised in 12 sections attached in peace-time to Class I veterinary hospitals at certain important stations.

Military Farms Department—This department which is under the control of the Quarter Master-General of Supply consists of two branches—

(1) The military grass farms, which provide fodder for the army.

(2) The military dairy farms, for the provision of dairy produce for hospitals, troops and families.

Educational Services—The education of the army is under the control of the Army Educational Corps and of Indian officers borne,

supernumerary to the establishment of units of the Indian Army. The establishment is as follows including training schools —

British officers.	Indian officers	B O Rs	I O Rs	Civilians
67	38	167	11	247

Terms of service in the Indian army are as follows —

Cavalry 7 years service in army
Artillery 6 years service in army for gunners 5 for drivers and 4 for the Heavy Battery personnel.

S & M Corps 7 years service in army (5 for the Burma S. & M.)

Indian Signal Corps 6 years service in army
Infantry and Pioneers (except Gurkhas the 4th Hazara Pioneers and trans frontier personnel of the Infantry) 5 years in army service and 10 years in the reserve (Note: This is the minimum period of service with the colours 15 years in Colour and Reserve service must be done)

Gurkhas, 4th Hazara Pioneers, trans frontier personnel of the Infantry and Indian combatant personnel of British Infantry Battalions, 4 years service in army

Indian Military establishments of the Indian Army Ordnance Corps, 4 years' service in the army

Animal transport personnel of the Indian Army Service Corps drivers of mechanical transport and all combatants of the Army Veterinary Corps 6 years service in army and 4 in the reserve

All combatants in the Works Corps, 2 years service in army

Bandmen, musketeers trumpeters drummers buglers, fifeers and pipers, 10 years service in army

Except in the case of those enrolled in the Works and of those who are non-combatants all School masters clerks artificers armourers, engine drivers farriers carpenters tailors and bookmakers, 10 years service in army

The period laid down for service in the army may be extended. Combatants may be enrolled direct into the Reserve in which case there is no minimum period of service but no one is allowed to serve in the reserve or in any class of the reserve for a longer period than is permitted by the regulations in force

Frontier Militia and Levy Corps.—These forces are Civil troops, i.e. they are administered and paid by the Civil authorities and not by the Army. They are however officered by Officers of the Regular Indian Army. These forces were raised for duty on the North West Frontier and at present consist of the following — Kurram Militia, Tochi Scouts, South Waziristan Scouts, Chitral Scouts, Olight Scouts, Zheby Levy Corps and the Makran Levy Corps. The various names show the localities in which each force is situated

The Auxiliary Force.

After the war, the question of universal training for European British subjects came up for consideration, and it was decided that in India, as elsewhere in the Empire, the adop-

tion of compulsory military service would be undesirable. It was recognised however that India needed some adequate auxiliary force, if only on a voluntary basis that could be trained to a fairly definite standard of efficiency and in the result an Act to constitute an Auxiliary Force for service in India was passed in 1920. Under this Act membership is limited to European British subjects, and the liability of members for training and service is clearly defined. Military training is graduated according to age the more extended training being carried out by the younger members the older members being obliged to fire a musketry course only. It was laid down that military service should be purely local. As the form of service that would be most suitable varies largely according to localities the local military authorities acting in consultation with the advisory committee of the Auxiliary Force area were given the power of adjusting the form of training to suit local conditions

The Auxiliary Force comprises all branches of the service cavalry artillery engineers infantry—in which are included railway battalions,—machine gun companies, B.A.S.C. sections and the Medical and Veterinary Corps. Units of the Auxiliary Force are under the command of the local military authority and the latter has the power of calling them out for service locally in a case of emergency. Their role is to assist in home defence. Training is carried on throughout the year. Pay at a fixed rate is given for each day's training and on completion of the scheduled period of annual training every enrolled member of the force is entitled to a certain bonus. Men enrol in the Auxiliary Force for an indefinite period. An enrolled person is entitled to claim his discharge on the completion of four years' service or on attaining the age of 45 years. Till then he can only be discharged on the recommendation of the advisory committee of the area

The duties connected with the Defence Light Sections at Calcutta Bombay Karachi and Rangoon are performed by the Field Companies R.E. (A.F.I.) at those stations, assisted by Indian ranks of Sapper and Miner Units

Indian Territorial Force.

The Territorial Force is one of the several aspects of the Indianisation of the military services. The force is intended to cater amongst other things, for the military aspirations of those classes of the population to whom military service has not hitherto been a hereditary profession. It is intended at the same time, to be a second line to and a source of reinforcement for the regular Indian army. Membership of the force for this latter reason carries with it a liability for something more than purely local service or home defence. It may, in certain circumstances involve service overseas. The force is the direct successor of the Indian section of the Indian Defence Force created during the war. It has been modelled on the old militia in England. The essence of its scheme of organisation consists in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units can be given sufficient preliminary training in peace to enable

them after a comparatively short period of intensive training to take their place by the side of regular units in war

The Indian Territorial Force consists at present of two main categories provincial battalions and the *university training corps battalions*. The latter are recruited from the staff and students of Indian universities. They are trained all the year round and are equipped with a permanent staff of British instructors. On ceasing to belong to a university a member of the corps is discharged. In the case of the university training corps battalions, it is not intended to enforce the liability to render actual military service. Their purpose is mainly educative to inculcate discipline and form character. But incidentally they are expected to be a source of supply of both officers and men for the provincial battalions

The members of the *provincial battalions* accept the full liability for service which has been mentioned. Seven such battalions were constituted in the first instance. The number has since been raised to twenty and though the unit establishment has not been completely filled in all cases, the movement has already achieved a greater degree of success than might have been anticipated at so early a stage. It is in contemplation to diversify and extend the scope of the force by constituting some auxiliary units. Although for the present the infantry arm only has been created with the addition of the I.T.F. Medical Corps the force by law may include every other army service.

Men enrol in the provincial battalions for a period of six years the period being reduced to four years in certain cases. On the completion of the first period they can re-enrol voluntarily for further specified periods. During his first year every man does twenty-eight days preliminary training and during every year he receives twenty-eight days periodical training.

The Indian State Forces

The Indian State Forces, formerly designated Imperial Service Troops, consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruling Prince and Chiefs. Government on the other hand provide permanently a staff of British officers termed "Military Advisers and Assistant Military Advisers" to assist and advise the Ruling Prince in organising and training the troops of their States.

After the war had ended the Indian States, like the Government of India undertook a military reorganisation which in a number of cases has already been carried out. The principal feature of the new arrangements as adopted more or less generally, is that in future the Indian State Forces should be composed of three categories of troops, namely

Class A—Troops in this class are organised on the present-day Indian Army system and establishments and with some exceptions are armed with the same weapons as corresponding units of the regular Indian Army

Class B—These troops consist of units which are in most cases little inferior in training and discipline to troops of Class A, but they are not organised on present-day Indian Army establishments. They have as a rule retained the system of the pre-war formations. Their standard of armament is pitched lower than that of Class A troops

Class C—These troops consist in the main of militia formations which are not permanently embodied. The standard of training discipline and armament prescribed for this class, is generally lower than the standard prescribed for Class B troops

The authorized and actual strength of the Indian State Forces on the 1st October 1927 amounted to—

	Authorized strength	Actual strength on the 1st October 1927
Artillery	1 481	1 500
Cavalry	9 714	9 380
Infantry	20 046	23 322
Camel Corps	465	460
Motor Machine Gun Sections	75	24
Sappers	1 174	990
Transport Corps	1 611	1 580
Grand total	44 570	38 056

Officers

There are two main categories of officers in the Indian Army those holding the King's Commission and those holding the Viceroy's Commission. The latter are all Indians (apart from the Gurkha officers of Gurkha battalions) and have a limited status and power of command both of which are regulated by the Indian Army Act and the rules made thereunder. Until recent years Indians were not eligible for King's Commissions.

King's Commissioned Officers for the Indian Army are obtained from two sources from among the cadets who pass through the Royal Military College, Sandhurst and by the transfer to the Indian Army of Officers belonging to British units. The former is the principal channel of recruitment the latter being only resorted to when, owing to abnormal wastage or for some other special reason requirements cannot be completely by means of cadets from Sandhurst. When a cadet has qualified at Sandhurst and has received his commission he becomes in the first instance, an officer of the Unattached List, and is posted for a period of one year to a British battalion or regiment in India where he receives a preliminary training in his military duties. At the end of the year he is posted as a squadron or company officer to a regiment or battalion of the Indian Army. Administrative services and departments of the

army draw their officers from combatant units as it has hitherto been regarded as essential that every officer should in the first instance receive a thorough grounding in combatant duties and acquire at first hand an intimate knowledge of the requirements of the combatant arms.

The promotion in rank of King's commissioned officers of the Indian Army is regulated by a time-scale up to the rank of Lieutenant-Colonel but is subject also to certain professional examinations and tests being successfully passed. The rank of Lieutenant-Colonel is in normal course attained at about 25 years service; promotion beyond this rank is determined by selection.

Indian Officers.—One of the most momentous decisions of the Great War so far as the Indian Army is concerned was that which rendered Indians eligible to hold the King's commission in the army. It was proposed that King's commissions should be obtainable by Indian gentlemen in the following three ways: (1) By qualifying as a cadet through the Royal Military College Sandhurst; (2) by the selection of specially capable and deserving Indian officers or non-commissioned officers of Indian regiments who had either been promoted from the ranks or joined their regiments on direct appointment as jemadar; (3) by the bestowal of honorary King's commissions on Indian officers who had rendered distinguished service but whose age and lack of education precluded their being granted the full King's commission. A number of honorary King's commissions are still granted annually to a limited number of Viceroy's commissioned officers of the class described in the third category mentioned above. The second of the sources of selection mentioned has since been almost entirely abandoned for the reason that a Viceroy's commissioned officer of this class cannot as a practical matter hope to have a normal career as a King's commissioned officer. It is the first of the three avenues of selection mentioned which gives the fullest opportunity to the Indian of satisfying a military ambition and of enjoying a military career on terms of absolute equality with the British officer who as a general rule also enters the army by qualifying at Sandhurst. It was decided that in the first instance ten vacancies at Sandhurst should be reserved annually for Indian cadets.

A further measure adopted by the Government was the establishment of the Prince of Wales Royal Indian Military College at Dehra Dun, a Government institution for the preliminary education of Indians who desire to qualify for the King's commission in the army through the Royal Military College Sandhurst.

The arrangements so far made enable a maximum of 70 boys to be in residence at the college at any one time and the normal course of education is planned to occupy six years. These dispositions will render it possible to provide from Dehra Dun sufficient candidates to fill the ten vacancies at Sandhurst which are at present allotted annually to Indians. In February 1925, it was decided that eight units of the Indian Army should be completely Indianised. The units selected for Indianisation were 7th Light Cavalry, 16th Light Cavalry

2/1st Madras Pioneers 4/19th Hyderabad Regiment 6th Royal Battalion 5th Mahratta Light Infantry 1/7th Rajput Regiment (Q V O L I) 1/14th Punjab Regiment 2/1st Punjab Regiment

Training Institutions

The following institutions exist in India for the higher training of military personnel and for the education of instructors for units—

Staff College Quetta
Senior Officers School Belgaum
School of Artillery Kakul
Equitation School Sangor
Small Arms School Pachmarhi (a)
Army School of Physical Training Ambala
Machine Gun School Ahmednagar (a)
Army Signal School Poona
Royal Tank Corps School Ahmednagar
Army School of Education Belgaum
Army School of Cookery Poona
Army Veterinary Schools Ambala and Poona
Indian Army Service Corps Training Establishment Rawalpindi

(a) Following the procedure adopted at Home the Small Arms and Machine Gun Schools were amalgamated in February 1927 the two schools are now situated in one place. Hence they are shown as two schools above the one for Small Arms at Pachmarhi and that for Machine Guns at Ambala.

The object of these schools is to ensure to all units throughout the army a constant for the supply of officers warrant officers non-commissioned officers and men provided with a thorough up-to-date knowledge of various technical subjects and with the ability to pass on this knowledge.

The King George Royal Indian Military Schools at Jhelum and Julundur also exist for the education of the sons of Indian soldiers with a view to their finding a career in the Indian Army and the Prince of Wales Royal Indian Military College at Dehra Dun exists for the preliminary education of Indians who desire to qualify for the King's Commission in the Army through Sandhurst.

Army in India Reserve of Officers.—Previous to the Great War there had been what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The war proved that for many reasons this reserve did not meet the requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A I R O published in 1926 had the effect of stimulating recruitment. They provide that the following gentlemen may be granted commission in the Reserve—

(1) Officers who having held King's commissions and retired from H. M. S. forces, are not liable for further service.

(2) Officials, other than Military officers serving under the Government of India or a local Government

(3) Private gentlemen residing in India possessing the requisite qualifications and previous training

The Reserve comprises each arm and branch of the Army and the officers are posted to definite branches and units

All officers are required to undergo periodical training up to a maximum of 30 days a year and receive pay and allowances admissible to regular officers of the same rank and arm of the service during training

Members of the Auxiliary Force India may become officers designate for the grant of commissions in the A I R O upon the calling to army service of that reserve

Officers and officers designate receive Rs 200 annually as a retaining fee and an outfit allowance of Rs 400 on joining

The strength of the Reserve towards the end of 1927 was 85*

Recruitment for the Reserve has been extended to Ceylon the number to be commissioned in Ceylon being limited to 50

The Fighting Races.—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India but the experience of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various castes and tribes enlisted in the Army have since the war undergone fluctuations and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry and the contribution of the Gurkhas was also large. It is probable that these classes preserve their preponderance. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal of whom there are twenty complete battalions which during the war were considerably increased. As fighters in the hills they are unsurpassed even by the Pathans in the North-West Frontier but the Garhwals and Kumaons are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial

bearing, these warriors of Hindustan formed the backbone of the old Bengal Army and have sustained the British flag in every campaign in the East. Their high caste and consequent prejudices in no respect interfere with their martial instincts and efficiency in war. They furnish many battalions. The Garhwals are Hill Rajputs, good and gallant soldiers who have proved themselves equal to any other troops on the field of battle and have established an imperishable record in the war both in Europe and in the East. The two battalions which were all we had in 1914 have since been added to. The Jats are a fine and warlike race of Hindus found in the Delhi and Mooltak districts and adjoining territory. It was these people who held out so bravely at Bharatpur and repelled Lord Lake's army in 1805. They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopotamia.

Among those who have rendered signal and gallant service in the war are the Mahattas of the Deccan and the Konkan, who have revived the reputation held by their race in the days of Shivaji the founder of the Marhatta Empire. It is probable that their proved efficiency in war will lead to their recruitment in larger numbers in future.

In addition to the castes that have been mentioned other caste men from the south and other parts of India have filled the ranks of the Pioneer regiments and Sappers and Miners, and done their duty well in every campaign in which they have been engaged.

During the war the Victoria Cross was awarded for conspicuous gallantry to 2 Indian officers, 4 non-commissioned officers and 6 other ranks of the Indian Army.

The Military Cross was awarded to 96 Indian officers for distinguished service rendered during the Great War and to 3 Indian officers for service in Waziristan.

A large number of Indian Officers and men were also granted Foreign decorations.

Summary of India's Effort in the War.—In a despatch by the Commander-in-Chief published in July 1919 the whole operations of the Indian Army during the war are reviewed. His Excellency gives in it the following figures showing the extent of India's contribution in terms of men. On the outbreak of war the combatant strength of the Indian Army, including reservists, was 194,000. Indian ranks enlistments during the war for all branches of the service amounted to 791,000 making a total combatant contribution of 985,000. Of this number 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000, of whom 943,000 have served overseas. Casualties amounted to 106,594, which includes 38,894 deaths from all causes. The number of animals sent overseas was 175,000.*

* For a record of the services of the Indian Army in the War see 'The Indian Year Book of 1923' p. 152 et seq.

Budget Expenditure on National Defence

A part of the Defence expenditure on the Indian Budget is incurred in England the nature of such expenditure being indicated in the detailed Tables of Army Marine and Military Engineer Services expenditure. This expenditure is met by transfer of funds from India. Since April 1st, 1920 the accounts have been prepared on the basis of the rate of 2/ per rupee for the conversion of English sterling transactions into rupees. The sterling value of the rupee has however stood at a lower level in recent years—the rate adopted for Budget 1927-28 is 1s 6d per rupee. In consequence of this variation from the 2/ rate

large sums have to be brought to account as credits or debits on account of exchange in respect of transactions involving remittances to or from India. All these exchange gains or losses are recorded in the first instance under a suspense heading the portion attributable to the various headings in respect of outlay incurred in England is calculated every month on the basis of the average of the daily telegraphic transfer rates from Calcutta to London and transferred to these accounts and it is considered with reference to the circumstances of each year whether the balance remaining under the suspense heading

after these transfers are made should be written off to revenue or kept in suspense against the possibility of opposite results in succeeding years.

As a rule the receipts collected by the various departments are not set off against expenditure as appropriations in aid but are

shown separately on the receipts side of the budget. This is especially the case with the receipts of the Military Departments which amount to considerable sums.

The Provincial Governments incur no expenditure for Military purposes.

SUMMARY OF DEFENCE EXPENDITURE (Gross.)

Table 1.

	1925-26	1926-27	1927-28

Transportation, Conservancy and malaria measures, hot weather establishments and miscellaneous			66.90
Total Effective Services			5,47.49
(2) Non-effective Services			3,57.30
B Royal Air Force			
Effective			47.95
Non-effective			1.80
Total England	9,70.49	9,74.84	9,54.33
Total Army Expenditure—			
Effective	4,75.38	48,82.32	42,28.53
Non-effective	7,67.94	8,21.31	8,81.88
Grand Total	5,53.42	55,03.63	51,54.91

The amounts expended in England on effective services consist of such charges as payments to the War Office and Air Ministry in London in respect of British Forces serving in India the transport to India of these forces and payments on account of stores taken to India by British Forces educational establishments in England for Indian Services leave pay of Indian and British service Officers on the Indian Establishments purchase of imported stores etc. The expenditure on non effective services consists of payments to the War Office in London for retired pay to British forces for services in India and to non-effective and retired officers of the Indian Service and of various gratuities.

Of the sum of Rs 549.2 millions allotted in the Budget for 1927-28 to meet the net expenditure on Military Services (i.e. after deducting Receipts) Rs 504.4 millions will be

available for expenditure under the heading Army made up of Rs 412.0 millions for expenditure in India and Rs. 92.4 millions in England. The Indian Expenditure includes Rs 30.4 millions for exchange on net expenditure in England.

The English expenditure includes £16,000 for payments in England of gratuities and allowances to surplus officers of the Indian Army.

The gross working expenses of military establishments such as bakeries pasture and dairy farms, army clothing factories and storage depots army ordnance factories and base mechanical transport workshops are included in the Budget.

The division of expenditure on *Military Engineer Services* between India and England is shown below

	1925-26	1926-27	1927-28

THE EAST INDIES SQUADRON

Since 1908 a squadron of the Royal Navy, known as the East Indies Squadron has been maintained in Indian waters. It has naturally varied in strength from time to time, and of late years in particular there have been several changes in its composition the most recent being in the direction of strengthening it, owing to the disappearance of strength in the other squadrons of the Eastern Fleet. In 1908 the squadron consisted of one second class and three smaller cruisers and four sloops or gunboats. In 1906 when the policy of withdrawal from Eastern waters was inaugurated, it consisted of two second class and two third class cruisers and remained at this strength until 1910 when one second class cruiser was withdrawn and two smaller vessels substituted, and three cruisers were sent from the Mediterranean to assist in the suppression of the arms traffic in the Gulf. By 1913 the position of the East Indies squadron had considerably improved. The battleship Swift-

sure had taken the place of the second class cruiser which had been flagship and a modern second class cruiser replaced the Perseus.

The Squadron in 1827.—The composition of the Squadron (Fourth Cruiser Squadron) is as follows —

"Etingham" (Flag) Cruiser 9,770 tons
Emerald Cruiser 7,550 tons "Enterprise"
Cruiser 7,550 Sloop "Crocus," "Cyclamen"
and "Lupin" Special Service vessel "Tread"
(Senior Officer Persian Gulf) Survey
Ship Ormonde.

The proportion of contributions from the overseas Dominions towards naval expenditure is shown in the following table issued with the last Navy Estimates that gave details —

Received from	Nature of Service.	Total
	Maintenance of His Majesty's Ships in Indian Waters	£ 100,000
India	Indian Troop Service (on account of work performed by the Admiralty)	8,400
	Repayment on account of services rendered by His Majesty's Ships engaged in the suppression of the Arms Traffic in the Persian Gulf	64,000
Australian Commonwealth Dominion of Canada.	Contributions on account of Liability for Retired Pay of Officers and Penalties of Menient from the Royal Navy	10,800
Australian Commonwealth Do	Survey of the N W Coast of Australia	7,500
Dominion of New Zealand	Maintenance of an Australasian Squadron and of a branch of the Royal Navy Reserve	41,600
	Maintenance of an Australasian Squadron and of the Imperial Navy generally also of a branch of the Royal Naval Reserve	100,000
Union of South Africa	General maintenance of the Navy	85,000
Newfoundland	Maintenance of a branch of the Royal Naval Reserve	8,000
	Total	£ 415,500

India's Marine Expenditure.

Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements which date from 1890, a subsidy of £100,000 a year is paid for the upkeep of certain ships of the East India Squadron which may not be employed beyond prescribed limits, except with the consent of the Government of India. The expenditure amounts to nearly £400,000 annually.

The question of a new distribution of the burden of the cost of Imperial Naval defence was discussed at the Imperial Conference in London in October—November 1926. The matter appeared to be one on which the delegates could form no new decision without further consultations in their respective capitals and no resolution was passed.

The Royal Indian Marine is being reorganised so as to form the nucleus of an Indian Navy. The R I M ship 'Dalhousie' has been reconditioned for use as a Depot Ship. Three of the R I M Ships have been or are being reconditioned for use as loops of war in the R I M. Negotiations are in progress with the Admiralty for the provision of a fourth sloop for the new service. The necessary legislation in Parliament has been undertaken and completed and the consequential Indian Legislation in regard to the discipline of the new force will be introduced in the Indian Legislature as soon as possible.

ROYAL INDIAN MARINE

The Royal Indian Marine (The Sea Service) under the Government of India traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the Dragon and Roseander (or Omlander), were despatched from England in 1612 under a Captain Best and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows —

Hon E I Co's Marine	1612—1686
Bombay "	1686—1830
Indian Navy "	1830—1863
Bombay Marine	1863—1877
H M Indian Marine	1877—1892
Royal Indian Marine	1892, Present day

The Marine has always been most closely connected with Bombay and in 1663 when the E India Co took over Bombay, Captain Young of the Marine was appointed Deputy

Governor From then until 1877 the Marine was under the Government of Bombay and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India Bombay has continued to be the headquarters and the official residence of the Director

War Service of the Marine

1612-1717 Continuous wars against Dutch Portuguese and Pirates for supremacy of West Coast of India 1744 War with France capture of Chandernagore and French ship *Indienne* In 1756 Capture of Castle of Gheria 1774 Mahratta War capture of Tannah Latter part of the eighteenth century war with French and Dutch Capture of Pondicherry Trincomalee Jafnapetam, Colombo etc 1801 Egyptian campaign under Sir Ralph Abercrombie 1803 War with France 1810 Taking of Mauritius and capture of French ship in Port Louis Early part of the nineteenth century suppression of Jowassi Pirates in the Persian Gulf. 1811 Conquest of Tara 1813 Expedition against Sultan of Sambar 1817-18 Mahratta War, capture of Forts at Severndroog 1819 Expedition to exterminate piracy in the Persian Gulf 1820 Capture of Moocha. 1821 Expedition against the Beni Koo Ali Arabs 1824-25 First Burma War 1827 Blockade of Berbera and Somali Coast. 1835 Defeat of Beni Yas Pirates 1838 Expedition to Afghanistan and capture of Karachi 1838 Capture of Aden 1840-42 War in China. 1843 Selado War Battle of Meane capture of Hyderabad 1845-48 Mahratta war in New Zealand 1848-49 War in Punjab siege of Multan 1852 Second Burma War Capture of Rangoon Martaban Basmeln Prome and Pegu 1855 Persian War capture of Bushiro Muhammerah and Ahwaz 1856-57 War in China 1857-59 The Indian Mutiny 1859 Capture of the Island of Beyt 1860 China War Canton Taku Forts, Fatschan and Peking 1871 Abyssinian War 1882 Egyptian Campaign 1885 Egyptian Campaign 1885 Third Burma War 1889 China Lahai Expedition 1896 Snakin Expedition. 1897 Expedition to Intirbe, Mozambique & Africa 1899-1902 8 African War 1900-01 Boxer Rebellion in China relief of Peking, 1902-04 Somaliland Expedition, Suppression of Arms Traffic operations, Persian Gulf 1912-14

During the War 1914-1918 Royal Indian Marine Officers were employed on many and various duties. Royal Indian Marine Ships *DURHAM*, "HARDING", *NORTHBROOK*, *LAURENCE*, "DALHOUSIE" and "MINTO" had their guns mounted and served as Auxiliary Cruisers. Officers also served in the Royal Navy in the Grand Fleet, Mediterranean, North Sea, North Red Sea and Caspian Sea Fleets

In addition to transport duties in Indian Ports Officers were sent to Marseilles East Africa and Egypt for such duties and on the entry of Turkey into the War were employed on duties towing and manning River Craft and Barges to and in Mesopotamia and it was necessary to enlist a number of Temporary Officers, Warrant Officers and men to the number of approximately 240 50 and 2,000 respectively for these and other duties.

When the War Office assumed full control of Operations in Mesopotamia a large number of Regular and Temporary Officers and men were seconded to the Royal Engineers and General Service respectively for duties in the Inland Water Transport which controlled all River Transport work in that country and these officers held many important executive appointments in that unit

The movements of all sea transports between India and the various theatres of War were controlled by Marine Officers

Trawlers were built in the Bombay and Calcutta Dockyards and mine sweeping operations were carried out with these and launches off Bombay and elsewhere the trawlers were also used for towing duties

Retired Royal Indian Marine Officers were employed on naval transport duties in England and France, and also in very responsible positions with the Inland Water Transport in France

Service in the War 1914-18—The Royal Indian Marine though a small Service compared with the Army and Navy played a very active and conspicuous part in the European War These are set out in detail in the Indian Year Book for 1922 and earlier editions (q v pp 202 & seq)

Personnel 1927

DIRECTOR.

Captain E J Headlam, C.S.I., O.M.C. D.S.O., R.I.M.

(The Director R.I.M. advises the Government of India on all maritime matters. Is also Principal Naval Transport Officer East Indies)

DEPUTY DIRECTOR

Capt H Morland R.I.M.

FINANCIAL ADVISER

R. E. Odling Esq

CHIEF SUPERINTENDENT TO THE

DIRECTOR, R. I. M.

THE ROYAL INDIAN NAVY

The official announcement of the proposal to reconstruct the Royal Indian Marine as a Government department to be called the Royal Indian Navy was made by the Viceroy in the Council of State in February 1926. He said that the creation of an Indian Navy had been under the consideration of the Government of India for some time past and the intention of Government to take measures was strengthened by the recommendations of the Mercantile Marine Committee to reorganise the Royal Indian Marine on the lines of a combatant naval service. After consulting several naval experts the Government of India appointed a committee to formulate definite proposals.

The following were the members of the Committee: President—General Lord Rawlinson, Commander-in-Chief, India. Members—His Excellency Rear Admiral (now Vice Admiral) H. W. Richmond, Commander-in-Chief, His Majesty's ships and vessels, East Indies station; Sir B. N. Mitra, member of the Council of the Governor-General of India; Mr. E. Burdon, Secretary to the Government of India, Marine Department; Capt. E. J. Headlam, Director of the Royal Indian Marine.

The Committee met at Delhi during February 1926 and prepared their report which was approved in draft form by the late Lord Rawlinson before his death in March 1926. It stated generally: The scope of the task entrusted to us is to draw up a scheme for the purpose of putting into effect a policy defined in the following formula: 'The reconstruction of the Royal Indian Marine as a combatant force to enable India to enter upon the first stage of her own naval development, and ultimately to undertake her own naval defence.'

Our terms of reference arranged for convenience in the order in which we shall deal with them are as follows:—

To prepare a scheme for the reorganisation of the Royal Indian Marine so as to form the nucleus of an Indian Navy with special reference to (1) the functions to be ultimately performed by the Indian Navy and the methods of employment with a view to its undertaking those functions; (2) The number and class of vessels that can be maintained with available budget allotment; (3) Recruitment strength training and conditions of service of personnel; (4) Relations between the higher command of the Indian Navy the Government of India and the Commander in Chief, East Indies including the proposed employment of a Chief Naval Staff India; (5) Provision for and maintenance of vessels including the continuance or abolition of the Royal Indian Marine Dockyard.

A Sea-going Force—The Committee observes that by far the most important aspect of the new force in its early stages will be its duty as a training squadron. The new personnel will need to be thoroughly trained in gunnery, mine-sweeping, harbour defence and seamanship. In this connection we cannot insist too strongly on ships of the Indian Navy becoming from the first a sea-going force.

Efficiency and enthusiasm alike will melt away if the new navy remains in port and practices nothing but harbour defence. A valuable service which we think that the Indian navy should be able to undertake in the near future will be the responsibility for policing the Persian Gulf in peace time by which means the three vessels maintained in those waters by the Imperial Government will be set free of other duties at present performed by the Royal Indian Marine. We consider that the Marine survey should be retained as its work in peace and war is essential for fighting sea service. Control of station ship at Aden Port Blair, Rangoon and the Persian Gulf to attend to the conveyance of corps and officials and to supervise the work of lighting and buoying in adjacent waters should not be a function of the new navy. Retention of these responsibilities would not be in our opinion compatible with development of a fighting force. The work of carrying troops can be contracted for commercially at rates which could hardly fail to be cheaper than existing arrangements. The new service should also be responsible for marine transport at present carried out by the Royal Indian Marine. The cost of storage and maintenance in this connection will be a charge against the Indian Navy.

Peace Time Functions—The functions of the new Indian Navy in peace time will therefore be as follows: (a) Training of personnel for service in war; (b) Services required by the Indian Government in the Indian Ocean and Persian Gulf; (c) organization of the naval defences at the ports which are under the control of the Indian Government; (d) survey work in the Indian Ocean; (e) Marine transport work for the Government of India.

We recommend that in accordance with its new functions the service should be known as the Royal Indian Navy and should fly the White Ensign which is the recognised flag of the naval fighting forces of the Empire.

As regards the number and class of vessels the Committee says: On the assumption that these will be the functions of the Indian Navy we consider that a squadron of four sloops, two patrol craft, vessels four trawlers and two survey ships, together with one depot ship as already suggested would suffice to begin with.

The Committee estimate that the net annual cost of maintaining such a force would amount at first approximately to Rs. 68 lakhs. This figure is exclusive of the following items: (1) Rs. 12,50,000 cost of lighting and station ships which should be met from lighting fees and debited to other departments. At present two lakhs of this expenditure is debited to political estimates and the remaining ten and a half lakhs to marine estimates. (2) Rs. 4,00,000 for military launches which will be included in military estimates. (3) Rs. 1,14,000 on account of transport establishment, hitherto debited to His Majesty's Government. (4) Pension charges for ratings which will be a negligible figure for the first few years.

The Committee then refer to the estimates of the last two under marine department and observe that taking the present cost of the Royal Indian Marine to be an average of the years 1924-25 and 1925-26 the annual cost of the proposed forces would compare as follows

Royal Indian Marine total net cost
Rs. 51,62,000

Net annual cost of Indian Navy Rs 62,60,000

The cost on lighting and station ships and military launches would remain the same namely Rs 16,50,000. Thus the excess of the annual cost in respect of the Indian Navy over that of the Royal Indian Marine would be Rs 10,98,000. This excess, however is likely to be reduced to a considerable extent by the leasing of dockyards and still further if as is contemplated the Government of India institute a system for the levy of fees for lighting on shipping companies.

Apart from recurring expenditure the Committee estimate that there will be initial expenses assuming that new sloops will be provided by the Home Government on loan to the Indian Navy costing nine lakhs.

The Establishment—The following establishment of officers and warrant officers will be required—Flag-Officer Commanding 1, Captains, 9, Commanders, 18, Lt Commanders, Lieuts and Sub-Lieuts 48, Midshipmen 1, Boatswain 2, Engineer Capt. 1, Engineer Commander 1, Engineer Lieut Commander 1, Engineer Lieut Commander 1, Engineer Sub-Lieut 42, Assistant Surgeons 10, Clerks 1.

The figures for the executive and engineer officers include provision for the following port appointments at Calcutta, Rangoon, Madras, Bombay, Karachi and Aden—Captains 5, Commanders, 5, Lieut Commander, 1, Engineer Commander 8, Engineer Lieut Commander 1, Boatswain 1.

Commissions for Indians—The nature of the Commissions to be granted to officers in the Indian Navy is of importance. We recommend that King's Commissions similar to those now held by officers in the Royal Indian Marine be granted to British and Indian officers alike. Commissions should confer an authority limited to the force in which they are granted namely the Royal Indian Navy. We strongly deprecate the use of any form of commission which might convey the impression that the officers of the Indian Navy held a purely subordinate status, such as is held by the Viceroy's commissioned officers in the Indian Army. With the proposed initial strength of the force the recruitment of executive officers will be required at a rate of about three a year. We agree generally with Admiral Richmond's recommendation that British and Indian boys should enter by competition at the age of 18 exactly in the same way as public school cadets are now taken into the Royal Navy.

Recruitment of Cadets—We also agree with the proposal that Indian cadets should be mainly recruited through the Prince of Wales College, Dehra Dun. The examination for the cadetship would be held simultaneously in England and in India. One appointment

every year should be reserved for an Indian by either from Dehra Dun or an English public school subject to reaching a minimum qualifying standard in examination. For some time at any rate standard of education at Dehra Dun will be appreciably lower than at an English public school. It will, therefore, probably be necessary to raise the age limit for Indians recruited from Dehra Dun to the Indian Navy from 18 to 19 years on the analogy of a similar rule which already obtains in the case of Indian cadets for the Army. As the age of study at Dehra Dun is 12 to 18 it is likely that several years will elapse before any Indian cadets enter the navy from that institution. We do not see how this can be avoided. Cadetship should however be open to Indian boys at English public schools from the beginning. We understand that there is a considerable number of these some of whom might be attracted towards the service in the Indian Navy. On passing the examination British and Indian cadets should undergo a course of two years training in naval technical schools in the United Kingdom. On the completion of their training cadets would be given their commissions in the Indian Navy and would proceed to join a squadron in Indian waters.

Technical Training—We have considered the possibility of conducting initial technical training in India but this would entail very great expenditure on establishment and would reduce to the vanishing point the funds available for ships. It occurs to us that Indian entrants into the navy via Dehra Dun will normally have no sea experience whatever before passing their entrance examination into the Navy and that if they are then sent straight to the United Kingdom and made to undergo sea training in small vessels in home waters there is a possibility of undue discouragement. We therefore propose that candidates for the Indian Navy in the last two years of their education at Dehra Dun would be given opportunities for short cruises and some sea training in ships of the training squadron for officers and warrant officers of the new service.

We do not propose any departure from the rates of pay and pension now drawn by officers of the Royal Indian Marine. These rates were revised in 1920 and are in our view likely to prove suitable. We need not therefore complicate our scheme for reorganization by introducing any proposals under this head. Ratings will be drawn from the same class and in the same manner as lascars are at present recruited for the Royal Indian Marine. The rates of pay will also be the same but provision will have to be made for pensions and for funeral. We are confident that this class will provide suitable material for manning a combatant force and that if the terms of service are made attractive they will be forthcoming.

It might be found advisable to open up new fields of recruitment on the Malabar coast, Coromandel coast at Chittagong and elsewhere. The training of recruits which will also include educational training will be carried out at Bombay in depot ship and the training squadron. It will be necessary in the initial stages to obtain the services of two specialist officers (gunnery and minesweeping) to supervise the training of recruits. We have considered the

question of employing British petty officers instructors, but in view of the language difficulty we are doubtful whether their services would be of any value

We recommend that engineer officers should be recruited for the Royal Indian Navy in precisely the same manner as they now are for the Royal Indian Marine that is to say appointments are made by the Secretary of State for India. A candidate must have served at least five years as an apprentice in a recognised engineering firm or a Government dock yard. A candidate must not be less than 21 or more than 25 years of age. In order to facilitate the entry of Indians into this branch of the service we recommend that the Government of India should give financial assistance to suitable Indian candidates who are anxious to undergo the necessary training and qualify for selection. This assistance might take the form *inter alia* of passage concessions and payments of premia to engineering firms and Government might also exert their influence to induce such firms to take Indians as apprentices. One vacancy in three should also be definitely reserved for an Indian if a suitable candidate is forthcoming. The terms of service should remain as at present. The post engineering appointments mentioned will continue to be available for promotion of these officers.

The report then discusses the important question of the command. We propose that the command of the force should be vested in a flag-officer with the title of **Flag Officer Commanding**. This officer should be appointed from the Royal Navy at first but later on the appointment should normally be held by an officer of the Indian Navy. We prefer the title of Flag Officer Commanding to that of Chief of the Naval Staff as more descriptive of his status and duties. Chief of Staff implies an advisory position without executive powers. The tenure of office in our opinion should be for a minimum period of three years. In the early stages an Indian Navy could be administered by a single commander with a small staff. The simpler the organisation the more economically will it be controlled.

In his relation to the Government of India the officer commanding should be in a position

substantially analogous to that of the Air Officer Commanding the Royal Air Force, that is to say he should be subordinate to the Commander in Chief in India in the latter's capacity of minister of defence and responsible to him for the administration and efficiency of the Navy. Like the Air Officer Commanding he should also have the right of personal access to the Viceroy for the purpose of consultation on important questions relating to the Navy.

His headquarters should be in Bombay but we propose that he should be at liberty to pay periodical visits to the headquarters of the Government of India in order to confer with the marine department.

In war time unity of command is essential and we therefore recommend in war the ships and the personnel of the Indian Navy should automatically come under the direct control of the Commander in Chief East Indies. For this reason as well as others we think it desirable that the post of Flag Officer Commanding should never be held by an officer senior on the navy list to the Naval Commander in Chief.

Leasing of Dockyard—As regards the maintenance of vessels etc., the Committee state. We have considered very carefully the question of the dockyard. There are three possibilities open to the Government of India. First to sell the yard outright second to retain it under their own management third to lease it for a term of years to a private firm. We have no hesitation in rejecting the idea of a sale.

After examining all suggestions the Committee state. We recommend that the dockyard be offered for lease, and we consider that the lease should be for a period of fifteen years in the first instance. An essential condition should be that work for the Indian Navy should be given priority whenever required. The rest however of ships of the Indian Navy should not be a perquisite of this yard but should be open to competitive tenders. The existence of other yards in Calcutta and Colombo and of Mazagaon dockyard in Bombay itself should act as a safeguard against monopoly and consequent inflation of charges.

Finance

Indian finance has undergone such remarkable changes during the last few years that some general introduction of the present position is required. Originally there was one budget for the whole of India, the provinces receiving fixed allowances with which to meet their expenses. As the provinces grew in importance and in power it was obvious that these conditions could not continue and there developed a long struggle between the Provinces and the Government of India, the former claiming a larger share of the revenues raised within their borders and greater freedom in the spending of them and

the Government of India, perhaps not unnaturally striving to retain its control. But by degrees the situation was improved into a working compromise. Contracts were made between the Government of India insuring to the provinces adequate and growing funds, an important element in these contracts being the division of certain heads of revenue between the Province and the Government of India, so as to give the Province as the tax collecting agency an incentive to develop revenues to a reasonable extent. Later, the provinces were given the product of certain fixed heads of revenue instead of the

section. The Government of India (p. 9) But when a balance sheet on these lines was drawn it was found that the Government of India was insufficiently provided with money to carry out its responsibilities. The deficiency was 983 lakhs of rupees. It was very difficult to adjust this contribution equitably amongst the provinces concerned because under the various settlements effected there was a wide disparity between the conditions of the various provinces. Ultimately the following decision was arrived at with machinery for the gradual extinction of the provincial contributions. If ever the Government of India was in the happy position to be able to do without the funds

In the financial year 1921-22 contributions shall be paid to the Governor General in Council by the local Governments mentioned below according to the following scale —

Name of Province	Contributions (in lakhs of rupees)
Madras	348
Bombay	58
Bengal	93
United Provinces	240
Punjab	175
Burma	64
Central Provinces and Berar	22
Assam	15

From the financial year 1922-23 onwards a total contribution of 454 lakhs or such smaller sum as may be determined by the Governor General in Council shall be paid to the Governor General in Council by the local Governments mentioned in the preceding rule. When for any year the Governor General in Council determines as the amount of the contribution a smaller sum than that payable for the preceding year a reduction shall be made in the contribution of those local Governments only whose last previous annual contribution exceeds the proportion specified below of the smaller sum so determined as the total contribution and any reduction so made shall be proportionate to such excess —

Madras	17—90ths
Bombay	13—90ths
Bengal	12—90ths
United Provinces	13—90ths
Punjab	9—90ths
Burma	64—90ths
Central Provinces and Berar	5—90ths
Assam	24—90ths

It was from the first recognised by those who took a long view of Indian finance that this arrangement could only be temporary. The allocation of revenues as between the Federal Government and the Provinces created an open sore the Provinces never ceased to protest against

contributions to the central revenues which they maintained were inequitable and impracticable in several cases without reducing the whole standard of the administration. Moreover a superficial examination of these contributions, and their distribution as between Province and Province seemed to indicate astounding inequities. In practice these were not as marked as they seemed for instance although Bombay only contributed Rs 53 lakhs a year and Madras Rs 148 the custodians of the Provincial finances argued that Madras was much better off than Bombay. The point put before the Statutory Commission in 1919 and thereafter pressed on the Government of India was that there could be no peace until these contributions were abolished altogether. This view was accepted and as soon as funds became available the Government of India set about the work. First Bengal was excused its contribution altogether. Then in the financial year 1920-21 substantial remissions were made to all the Provinces in accordance with the principle outlined above. As they did not greatly benefit Bombay and to a lesser extent Burma special contributions were made to the funds of those Provinces. Then in the year 1926-27 no demands were made on the Provinces under this head. The Government of India utilised what it regarded as its permanent surplus revenue largely to reduce the contributions. Then it used its actual budget surplus in order to wipe out the balance. But no assurance was given that this would be a permanent arrangement for all practical purposes it meant that the provincial contributions were lived under the willments of 1919 were wiped off the slate.

But this did not end the discussion. Indeed it was only the first phase. A large issue remains and despite the extinction of the provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either aim at static like land revenue or which are actually declining as with excise where steps are being taken to reduce the consumption of alcohol liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure like those on education and sanitation which fall largely in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high, wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules make to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement it is felt that this does not go far enough and there is still this pressure for some share in the revenues from the taxes on income which, it is believed alone can put the industrial Provinces on a satisfactory basis.

Railway Finance.—The year 1924-25 was marked by another step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (q v) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways. It is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving effect to this recommendation but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance, a definite annual contribution from the railway revenue to the general revenues and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits further if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceed the sum of Rs. 3 crores one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgeting and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

I Recent Indian Finance

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance with a general surplus of revenue over expenditure. All such surpluses save when they were in the nature of windfalls going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 84 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible and Kabul lay open to easy seizure it had been thought worth while to occupy it the effect of this attack was to set a large part of the North-West Frontier afire and to thrust on the Government of India a

series of costly expeditions. When these were completed there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan (q v Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs 100 crores. This led to two results.

Retrenchment and Taxation.—Bowling to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee on the model of the Deddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman the Inchcape Committee. It sat in 1923 and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs 15 crores. Then in the Budget of 1923 it sought for further sources of revenue which would according to the then estimates produce funds which would permanently balance the accounts. The source of these additional funds was the Salt Tax which it was proposed should be doubled from one rupee four annas to two rupees eight annas a maund of 82 pounds. The circumstances were unusual. The Salt Tax is always unpopular in India. The public was so alarmed at the growth of expenditure and the increase in taxation that its representatives in the Legislatures were not disposed to place further funds at the disposal of the Government until the possibilities of economy had been fully explored. Then the first Assembly elected under the Constitution of 1919 was approaching the end of its term of office. That Assembly had voted increased taxes direct and indirect amounting to approximately Rs 89 crores per annum. The members felt that they had done their utmost and that they could not face their constituents after agreeing to a further increase in taxation and that in a most unpopular form. The rise in the Salt Tax was rejected by the Legislative Assembly. It was however accepted by the upper chamber the Council of State, and acting on the advice of his Financial Ministers the Viceroy certified the higher Salt Duty under the exceptional powers reserved for him in the Government of India Act of 1919. The effect of this measure was seen when the next elections were held. It is not open to doubt that this certification of the higher Salt Tax had a powerful influence in returning to the Legislative Assembly towards the end of the year a majority of Swarajists and Independents who were on the whole hostile to the form of Government established in the Act of 1919.

Equilibrium Established—Fortunately financial equilibrium was established and a surplus realised in the Budget of 1923-24. As the Indian Budgets are framed before the financial year has actually expired on the 31st March, there are always adjustments in the accounts. The estimated deficit for 1922-23 was below the actual figure the deficit estimated was Rs 17½ crores the actual deficit owing to reductions in military expenditure was Rs 15.02 crores. The Budget for 1923-24 was framed in the expectation of a surplus of Rs 81 lakhs. The commercial history of the year however did not realise expectations for the recovery of trade was slow. The higher duty on salt did not yield the revenue anticipated and although this is not the official view we maintain that the double duty actually decreased consumption. The revenue fell Rs 5.38 crores below the estimate. On the other hand there was a considerable saving in expenditure aggregating Rs 4.19 crores with the result that the estimated surplus in the Budget was converted into a deficit of Rs 88 lakhs. Against this the Government benefited from a providential windfall. They had at their disposal a sum of Rs 4.78 crores profits from the control of enemy ships belonging to India. After various adjustments this windfall left the Government with a surplus of Rs 2.39 crores which was applied to the reduction of debt.

Statement comparing the actual Revenue and Expenditure of the Central Government

(Imperial Revenue and Expenditure before the Reforms) with the Revised Estimates for each year from 1914-15 to 1925-26

(In thousands of Rupees)

	Revenue	Expenditure	Surplus(+) Deficit(-)
1914-15	76 15 35	78,83,14	-2,67,79
1915-16	80 00 98	81 79,26	-1,78 30

1923-24	1 83 16,33	1,80 77 48	+ 2,39,00
1924-25	1 88,08 92	1,82 35 66	+5 68,26
1925-26	1 33 3,93	1 30 01,80	+3 31 13

II THE PRESENT FINANCIAL POSITION

The financial position disclosed at the end of the year 1924-25 was a strong one. Trade was on the whole good, although cotton suffered from variations in prices and the expenditure was kept down. The actual result was at the close of the year the Government was left with a surplus of Rs 9.10 lakhs.

This clears the way for an examination of the Budget for 1927-28. This too was based on the assumption that it would be a normal year. The revenue was estimated at Rs 124.98 crores the expenditure was placed at Rs 120.26 crores leaving a surplus on the existing basis of taxation of Rs 4.70 crores.

Changes in Taxation—Certain changes in the incidence of taxation were however proposed. The first of these was the abolition of the export duty on hides, which had been condemned by competent authority. The second was the abolition of the export duty on tea but as this was accompanied by an increase in the income tax assessment on profits the actual yield was expected to be about the same. Next it was proposed to reduce the duty on motor cars from 30 to 20 per cent, and on tyres from 30

to 15 per cent. This dealt with a real grievance. No motor car no motor tyre is produced in India and the duty was not therefore protective. Admitting these are commodities which might legitimately pay a contribution to the general revenues there was a strong feeling that the rate of duty was much too high. A minor change was the placing on the free list of rubber seeds and stumps which was done to meet the case of the rubber industry especially in Burma. And finally the abolition of the stamp duty on cheques and on other Bills of Exchange payable on demand. The purpose lying behind this proposal was to develop the banking habit in India. It has long been recognised that the currency difficulties of the Government of India will be reduced as the banking habit is developed and that this growth will not be as rapid as it should be so long as the cheque duty is retained. Then in connection with the general policy of the Government, especially in the direction of establishing a Reserve Bank it is desirable to build up a Bill market and to make Bills as cheap as possible. In the result it was anticipated that the surplus would be reduced to Rs 8.64 crores.

Provincial Contributions—Now this surplus of Rs 3.64 crores was regarded by the Financial Authorities as a recurrent one. It was therefore decided to devote it to the permanent reduction of the Provincial contributions on the fixed scale set out above. The sum was not however large enough to enable the Government to make a clean sweep of these contributions so they decided to draw on the surplus of the previous year to remit the balance. The effect of this policy is shown in the following table—

	(Lakhs.)	
	Recurring remission	Non recurring remission
Madras	1 16	49
Bombay	19	37
Bengal	9	54
U P	99	52
Punjab	60	26
Burma	31	19
C P	8	14
Assam	8	7
TOTAL	3 50	2 58

But even this did not finally meet the case of Bombay so a further special allocation was made to that Province of Rs. 25 lakhs. When all these allocations were made there was left a balance of Rs. 1.01 crores, which was to be kept in reserve to meet any special expenses connected with the establishment of a Reserve Bank and the inauguration of the Gold Bullion Standard.

Ways and Means.—Before proceeding to consider the reception of the Budget there is an important element to be examined what is called the Ways and Means section of the Budget. As this reflects the very large capital commitments of the Government of India it is in some respects more important than the revenue account. Here again a position of great strength is disclosed in the following figures—

	Revised, 1926-27	Budget 1927-28
Liabilities		
Railway Capital Outlay	27 0	25 0
Other capital outlay (including Delhi, Poona and Telegraph, Vizagapatam Harbour)	2 0	2 2
Provincial Governments transactions	8 9	6 4
Discharge of debt (net)	37 0	20 5
	74 9	54 1

	Revised, 1926-27	Budget 1927-28
Resources		
Rupee loan (net)	26 0	27 0
Postal Cash Certificates	6 1	5 4
Other unfunded debt (including Postal Savings Bank)	6 6	6 2
Debt redemption	5 1	5 2
Depreciation and Reserve Funds	6 1	2 7
Exchange (net)	10 4	— 5
Miscellaneous	4 4	— 2 2
Reduction of cash balance	10 2	10 8
	74 9	54 1

Reception of the Budget.—A Budget of this character offered few targets of criticism in itself consequently the rather acid controversy which arose sprang from extraneous influences. It is explained in some detail in the section on Indian currency and exchange that the Royal Commission on this question recommended the stabilisation of the rupee at one shilling and sixpence. There was in some parts of the country strong opposition to this movement and a desire for a reversion to the older ratio of one shilling and fourpence or fifteen rupees to the pound. The Budget was based on the assumption that the rupee would be stabilised at one and six hence the financial authorities were charged with prejudging the issue—with working on this supposition before the Legislature had had an opportunity of expressing its views. The proposal to abolish the export duty on hides was rejected mainly on the ground that the duty gave some protection to the indigenous tanning industry. The Legislature also voted the following reductions in the grants provided for in the Budget—Railway Board Rs. 9 42,902 Executive Council Rs. 59,999 Army Department Rs. 5,39,000. This action needs a little explanation.

The cut in the provision for the Railway Board was the expression of considerable dissatisfaction with the composition and work of that body in the past also a protest against the failure to appoint an Indian Member. The cut in the vote for the Executive Council was a protest against the failure of the Government to expedite the progress of the Indian constitution. The reduction in the Army vote was made to register a protest against the suggestion of the Commander in Chief and to a lesser extent of the Finance Member that military expenditure had been reduced to the lowest possible point. The Governor General therefore in the exercise of his powers under the Government of India Act, decided as essential to the discharge of his responsibility to restore the following amounts—

Demand	Rs.
1 Railway Board	9 42,900
26 Executive Council	59,999
38 Army Department	5,78,000
In the Budget as finally passed, the Net Revenue and Expenditure were estimated as follows—	
	Rs.
Net Revenue	86 67 63 000
Net Expenditure	86 67 63 000

As compared with the Revised Estimate for 1926-27 these figures show a decrease of Rs 93 45 000 in net revenue and expenditure, respectively.

Statement showing the Debt of India outstanding on the 31st March 1924, 31st March 1925, 31st March 1926 and 31st March 1927

* At 1s 4d to the rupee the figures would be —	455.97	486.04	511.80	518.01	506.06

The following reductions were made by the Legislative Assembly in the demands presented to them —

Demand	Amount. Rs
1925-26	
40—Archæology	50 00 000
10-6-27	
1—Railway Board	9 68 000
4—Working Expenses—Administration	20 01 200

Of the demands for the year 1926-27 the Governor General in Council has under Section 67 A(7) of the Government of India Act, decided that the whole amount reduced under Demand No 1 and Rs 20 lakhs out of the amount reduced under Demand No 4 are essential to the discharge of his responsibilities.

3 The estimates of revenue and expenditure now stand as follows —

	Revised 1925-26 Rs	Budget 1926-27 Rs
Revenue	1 31 82 25 000	1 30 42 97 200
Expenditure charged to Revenue	1 30 04 87 000	1 30 37 66 200
Surplus	1 80 88 000	6 31 000

4 As regards the Ways and Means position apart from the increased surplus in 1925-26 due to the abandonment of the proposed

endowment for the Archaeological Fund, the balance at the close of the year in India will be increased owing to the demand for trade remittances to England having been less than anticipated. The amount of remittances from India in the current year to the Home Treasury was estimated at £50 million including £9 million on account of the Paper Currency Reserve. The present estimate is about £3½ millions lower. One of the results of this is that in order to enable the Secretary of State to have an adequate closing balance for 1926-27 it will be necessary to remit home next year a larger amount than previously anticipated. The total remittances required in 1926-27 are now estimated at £29 500 000. The net receipts from Cash Certificates in February 1926 have been unusually high and the total for the year is now expected to be about Rs. 7 crores. The latest information available also indicates the possibility of further reductions in the requirements of Provincial Governments. As a result of these and other changes the closing balance of the year is now estimated at Rs. 2 88 crores in India and £14 49 millions in England.

5 Taking the two years 1925-26 and 1926-27 together the present estimates show an improvement of about Rs. 2½ crores over the earlier estimates presented to the Legislature. The closing balance on the 31st March 1927 is taken as Rs. 1 62 crores in India and £5 64 millions in England.

THE LAND REVENUE

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is Settlement.

There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1793 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years more or less the land in a given district is subjected to a thorough economic survey on

the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition 1911)—He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officers' proceedings and to much greater rapidity in the completion of the Settlements. All the work of the settlement officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become finally binding, and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute whether affecting the interests of the State or of the people. The intention is to alter nothing but to maintain and place on record that which exists.

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord holdings or *Ryotwari* and *Zamindari* tenures. Broadly speaking the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct in *Zamindari* tracts the landlord pays on a rental assessment in the case of the former however there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North in Madras, Bombay, Burma and Assam *ryotwari* tenure is on an individual basis and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the raising period of settlement. Now the actual yield at the time of assessment alone is considered so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by unearned increment." The Government however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity such as canals and railways or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue

The incidence of the revenue charges varies according to the nature of the settlement the class of tenure and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements 50 per cent of the rental in the case of *Zamindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an infinitely signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact and the average rate is everywhere

on the down grade. This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume. It is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted—(1) In *Zamindari* tracts progressive moderation is the key note of the Government's policy and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess. (2) In the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords. (3) In *Ryotwari* tracts the policy of long term settlements is being extended and the proceedings in connection with new settlements simplified and cheapened. (4) Local taxation (of land) as a whole is neither immoderate nor burdensome. (5) Over-assessment is not as alleged a general or widespread source of poverty and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue when they occur to be imposed progressively and gradually and not *per saltum*. (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people. (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants

In regard to the second of the five propositions noted above various Acts have been passed from time to time to protect the interests of tenants against landlords and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act passed at the instance of Lord Curzon embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the *Zamindars* the Bengal cultivator was rack-rented impoverished and oppressed."

Government and Cultivator

While the Government thus interferes between landlord and tenant in the interests of the latter its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to

the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12 it is stated — The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual whereas under a *Zamindari* or kindred system the State would have gained nothing however much cultivation had extended throughout the whole of 30 years lease. On the other hand the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of dis-

tress suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All India accounts. It may be taken roughly at £28 million as compared with £84 million said to have been raised annually by Aurangzeb from a much smaller Empire.

The literature of the subject is considerable. The following should be consulted by readers who require fuller information — Land Revenue Policy of the Indian Government 1902 (Superintendent of Government Printing). Baden Powell's Land Systems of British India. Sir John Strachey's India, Its Administration and Progress 1911 (Macmillan & Co.). M. Joseph Chailley's Administrative Problems of British India* (Macmillan & Co. 1910) and the Annual Administration Reports of the respective Provincial Governments.

EXCISE

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common-place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as a one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit, fermented palm juice, beer made from grain, country brands of rum, brandy, etc. Locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue except in the Madras Presidency and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the *Mhowra*, flower molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured, as libations to their god should be such as had been made by their own hands. The introduction of any system amongst these people had to be worked very cautiously. Gradually as

the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries thus enabling Government to perfect its control by narrowing the limits of supervision and to regularize its taxation by imposing a direct still head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems

The Out-Still System may be taken to include all systems prior to order of development to the imposition of Still-head duty. Briefly stated the stages of development have been — First farms of large tracts. Second farms of smaller areas. Third farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area. Fourth farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the key-note lying in attempts where it has not been possible to work with the fixed duty system in its simplest forms to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District

monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still head duty revenue in the monopoly area being guaranteed to the State during the term of the lease

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations and the conditions of manufacture vend storage and transport, an improvement in the quality of the spirit an improved system of disposal of vend licenses reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption

Since the issue of the report of the Excise Committee 1905-06 no less than 218 000 square miles of territory were transferred from the out-still to the distilling system. In 1905-06 39 per cent of the total excise area and 28 per cent of the population of that area were served by out-stills the proportions in 1912-13 were only 15 and 8 per cent respectively

Excise has now been made over entirely to the Provincial Governments and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21. From that consumption reduced to proof gallons 10 per cent is deducted in the case of shops in Bombay City and 5 per cent elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system

Sap of the date, palmyra, and coconut palms called toddy is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so called brandies and whiskies are distilled from grape juice etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established mostly in the hills, for the manufacture of a light beer for European and Eurasian consump-

tion. The uniform fee of 8 annas per gallon is levied all over India at the time of issue

Foreign liquor is subject to an import duty at the tariff rates which are set out in the Customs Tariff (G. V.) It can only be sold under a license

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda

The base used is the Khowra flower. It is drunk in big towns as a substitute for German spirit and is excised at tariff rates

Drugs—The narcotic products of the hemp plant consumed in India fall under three main categories namely ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately and bhanga or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision storage in Bonded Warehouses payment of a quantitative duty before the retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922

Opium—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills but in some places, chiefly on social and ceremonial occasions it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments; the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent annually in each subsequent year until exports are totally extinguished at the end of 1930

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province

The estimated opium revenue in 1927-28 is Rs 38,83,00,000

SALT

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply, rock salt from the Salt Range and Kohat Mines in the Punjab brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch, and sea salt factories in Bombay Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata some of which are 250 feet long 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Barapara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into

the Bay of Bengal render the manufacture of sea salt difficult and the bulk of the supply, both for Bengal and Burma is imported from Liverpool Germany Aden Bombay and Madras.

Broadly one half of the indigenous salt is manufactured by Government Agency and the remainder under license and excise systems. In the Punjab and Rajputana the salt manufactures are under the control of the Northern India Salt Department a branch of the Commerce and Industry Department. In Madras and Bombay the manufactures are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damão on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs 2-8 per maund of 42 lbs. In 1903 it was reduced to Rs 2. In 1905 to Rs 1-8-0, in 1907 to Rs 1 and in 1910 it was raised to Rs 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs 2-8. In 1924 it was reduced to Rs 1-4-0. The estimated salt revenue in 1926-27 is Rs 7,00,00,000.

CUSTOMS

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent. in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent. but the opinions of Free Traders and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were re-imposed on yarns and cotton fabrics being excluded. Continued financial stringency brought piece goods within the scope of the tariff and after various expedients the demands of Lancashire were satisfied by a general duty of 8½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1910-11, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum, tobacco wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since 1894 was raised to 7½ per cent.

ad valorem except in the case of sugar as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twists and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excise but were over ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Rs 1-8-0 per 100 lbs. In the case of jute the export duty on raw jute was fixed at Rs 2-4-0 per bale of 400 lbs. approximately equivalent to an *ad valorem* duty of 5 per cent. manufactured jute was charged at the rate of Rs. 10 per ton on sackings and Rs 16 per ton on Hessian.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs 2-4-0 per bale of 400 lbs. in the case of raw jute and Rs 10 per ton on sackings and Rs 16 per ton on Hessians these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent to 7½ per cent without any alteration in the Excise, which remained at 3½ per cent. This change was

expected to produce an additional revenue of Rs. 21,000,000. The question of the Excise was left untouched for the reason amongst others, that the Government could not possibly forego the revenue of Rs. 220,000 which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs. 32,87,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent. a special duty was levied on matches of 12 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent. the duties on imported liquors was raised to 5 annas per degree of proof per gallon. the *ad valorem* duty of 7½ per cent. was raised to 20 per cent. In the case of certain articles of luxury the import duty on foreign sugar was increased from 10 to 15 per cent. and the duty on manufactured tobacco was raised by 50 per cent. The Customs duties were further increased in the Budget of 1922-23. The Government proposals in this direction have been described in an early passage. They were to raise the general Customs duty from 11 to 15 per cent., the cotton excise duty from 3½ per cent. to 7½ per cent., the duty on sugar from 15 to 25 per cent. a duty of 5 per cent. on imported yarn a rising duty on machinery iron steel and rail way material from 2½ per cent. to 10 per cent. together with the general duty on articles of luxury from 20 per cent. to 30 per cent. In the course of the passage of the Budget through the Legislature the cotton excise duty was retained at 3½ per cent. the duty on machinery was retained at 2½ per cent. and the duty on cotton piece goods at 11 per cent. the other increases being accepted. In 1925 the Cotton Excise duties were finally abolished. Full details with regard to the customs duty are set out in the section on Indian Customs Tariff (p. v). The estimated revenue from the customs in 1927-28 is Rs. 48,73,87,000.

The Senior Collectors were Covenanted Civilians specially chosen for this duty before the introduction of the Imperial Customs Service in

1906. Since that date, of the five Collectorships at the principal ports (Calcutta, Bombay, Madras, Rangoon and Karachi) three are ordinarily reserved for Members of the I.C.S. (i.e. Covenanted Civilians). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The subordinate staff is recruited entirely in India.

Income Tax

The income tax was first imposed in India in 1860 in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system and the present schedule was consolidated in the Act of 1938. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five ples in the rupee or about 8½d. in the pound on incomes between 500 and 2,000 rupees at the rate of four ples in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income tax schedule was completely revised, raised and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Budget of 1922-23 when the scale was fixed as follows—

RATES OF INCOME-TAX

	Rate.
A. In the case of every individual, every unregistered firm and every undivided Hindu family—	
(1) When the total income is less than Rs. 2,000	Nil
(2) When the total income is Rs. 2,000 or upwards but is less than Rs. 5,000	Five ples in the rupee
(3) When the total income is Rs. 5,000 or upwards but is less than Rs. 10,000	Six ples in the rupee
(4) When the total income is Rs. 10,000 or upwards, but is less than Rs. 20,000	Nine ples in the rupee
(5) When the total income is Rs. 20,000 or upwards but is less than Rs. 30,000	One anna in the rupee
(6) When the total income is Rs. 30,000 or upwards but is less than Rs. 40,000	One anna and three ples in the rupee
(7) When the total income is Rs. 40,000 or upwards	One anna and six ples in the rupee
In the case of every company and every registered firm	whatever
its total income	One anna and six ples in the rupee

RATES OF SUPER-TAX

- In respect of the excess over fifty thousand rupees of total income.—Rate
- (1) In the case of every company One anna in the rupee
 - (2) (a) In the case of every Hindu undivided family—
 - (i) In respect of the first twenty five thousand rupees of the excess ½d.
 - (ii) for every rupee of the next twenty five thousand rupees of such excess One anna in the rupee.
 - (b) In the case of every individual and every unregistered firm for every rupee of the first fifty thousand rupees of such excess One anna in the rupee
 - (c) In the case of every individual, every unregistered firm and every Hindu undivided family—
 - (i) for every rupee of the second fifty thousand rupees of such excess One and a half annas in the rupee
 - (ii) for every rupee of the next fifty thousand rupees of such excess Two annas in the rupee
 - (iii) for every rupee of the next fifty thousand rupees of such excess Two and a half annas in the rupee
 - (iv) for every rupee of the next fifty thousand rupees of such excess Three annas in the rupee.
 - (v) for every rupee of the next fifty thousand rupees of such excess Three and a half annas in the rupee
 - (vi) for every rupee of the next fifty thousand rupees of such excess Four annas in the rupee
 - (vii) for every rupee of the next fifty thousand rupees of such excess Four and a half annas in the rupee
 - (viii) for every rupee of the next fifty thousand rupees of such excess Five annas in the rupee
 - (ix) for every rupee of the next fifty thousand rupees of such excess Five and a half annas in the rupee
 - (x) for every rupee of the remainder of the excess Six annas in the rupee

The head of the Income Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor General in Council. The rest of the Income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is under section 5 (4) subject to the control of the Governor General in Council, but the Governor General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1925-26 is Rs 10 95 05 000

THE INDIAN MINTS

The silver coinage executed for the Government of India during 1925-26 consisted of Rs 20 54 72½ of half rupees and Rs 10 13 750 of quarter rupees coined from silver obtained from melting uncurrent coins

Nickel and Bronze Coinage.—The coinage during 1925-26 consisted of single piece two anna pieces and 34 010 544 nickel one-anna pieces. Bronze coinage consisted of 90,069,400 half piece and piece pieces of the aggregate value of Rs 6 54,970

HISTORY OF THE COINAGE

The Indian mints were closed to the un restricted coinage of silver for the public from the 28th June 1893 and Act VIII of 1893 passed on that date repealed Sections 19 to 26 of the Indian Coinage Act of 1870 which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897 when under arrangements made with the Native States of Bhopal and Kashmir the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees, but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency

Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one-half of the coinage profits should be paid into the reserve the remainder being used for capital expenditure on railways. The Gold Standard Reserve was called into action before the year 1907-08 was out. Sir George Turner, against India, and in March 1908 the Government of India offered bills on the Secretary of State up to half a million sterling while the Secretary of State sold £1,060,000 Consols in order to meet such demands. During April to August, further sterling bills were sold for a total amount of £8,058,000. On a representation by the Government of India, the Secretary of State agreed to defer the application of coinage profits to railway construction until the sterling assets of the Gold Standard Reserve amounted to £25,000,000. On the outbreak of the war in August 1914 the Reserve was drawn upon to meet the demands for sterling remittances and Government offer to sell £1,000,000 of Bills weekly.

Gold

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed was in the year 1891-92.

A Royal proclamation was issued in 1914 establishing a branch of the Royal Mint at Bombay. It stated—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or other wise and (b) the said specimen coins shall be subject to the trial of the pxx under section 12 of the Coinage Act, 1870 so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act 1870. Pending the completion of the arrangements at the Branch Royal Mint power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs 8,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August 1918 and 1,296,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April 1919 owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and sixpence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pias per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or at the option of Government sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and sixpence forty-nine

sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

With the receipt of large consignments of gold the Bombay Mint made special arrangements for the refining of gold by the chlorine process and at the end of the year 1919 20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold. The Refinery turned out 18,62,466 fine tolas of refined gold in 1920-21.

Silver

The weight and fineness of the silver coins are—

	FINE SILVER grains	ALLOY grains	TOTAL grains
Rupee	165	15	180
Half rupee	82½	7½	90
Quarter rupee or 4-anna piece	41½	3½	45
Eighth of a rupee or 2-anna piece	20½	1½	22½

One rupee = 165 grains of fine silver
 One shilling = 80½ grains of fine silver
 One rupee = shillings 2 04/10

Copper and Bronze

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1845. It was as follows—

	Grains
	troy
Double pie or half anna	200
Pice or quarter anna	100
Half pice or one-eighth of an anna	50
Pie being one-third of a pice or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows—

	Standard weight in grains troy	Diameter in millimetres
Pice	75	25.4
Half pice	37½	21.1
Pie	26	17.4

Nickel

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issue. The notification also prescribed the design of the coin, which has a waved edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The desirability of issuing a half anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18 and the four anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920 as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so

much importance and they continue to bulk so largely in all Indian economic questions, that we propose to give here a short summary of the Indian currency system in non technical language

I. THE SILVER STANDARD

Prior to 1893 the Indian currency system was a mono metallic system with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee which was nominally two shillings fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. This total reached a pitch which seriously alarmed the Government which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell whose report is commonly called the *Herschell Report*. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remain unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused and no-one else had the power to coin rupees as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and fourpence. Meantime in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling gold began to accumulate in the Paper Currency Reserve. These rupees having been attained a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II THE NEW STANDARD

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India that the Indian mints should be thrown open to the unrestricted coinage of gold so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues but should be set aside in a special reserve, to be called the

Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately eleven pence halfpenny and they were sold to the public at one and fourpence the profits were considerable. They were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India proposed to accept all the recommendations of the Fowler Committee actually only a portion of them was put in practice. The official rate of exchange was fixed at one and fourpence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt when sovereigns soon came back to the treasury, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India which at the time amounted to

about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State acting on behalf of the Government of India sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasury. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn caused the Indian exchange to become weak in November. This was one of the occasions contemplated in a different form by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy

coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough: there was an insistent demand for the export of gold or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty three thirty seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty nine thirty seconds representing gold export point and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London. It was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation: some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a *limping standard*.

III THE CHAMBERLAIN COMMITTEE

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints: others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India, at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure, at the transfer of a solid block of the Paper Currency Reserve from India to London, at the holding of a portion of the Gold Standard Re-

serve in silver in order to facilitate the coining of rupees and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing taken rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done. It was contended on the other side of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public

opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency, that it was not to the advantage of India to encourage the internal use of gold as currency, that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling, that no limit should be fixed to the amount of the Gold Standard Reserve, one half of which should be held in gold, that the silver

branch of the Gold Standard Reserve should be abolished, that Reserve Councils should be set on demand, that the Paper Currency should be made more elastic, and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt inconclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being not guilty but do not do it again. They gave a passing commendation to the idea of a State Bank. Sir James Begg, the only Indian banker on the Committee, appended a vigorous minute of dissent in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when in excess to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV CURRENCY AND THE WAR

Thereport was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporary recommendations of the Commission the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reserve Councils' £3,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs 8 crores was taken away. There was some lack of confidence in the Note issue and a demand for gold. Notes to the extent of Rs 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium, confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries, a heavy expenditure in India on behalf of the British Government, and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £8 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1918 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the export of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 53 pence on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergency times were to bring exchange under rigid control, confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence.—

Date of Introduction	Minimum Rate for Immediate Telegraphic Transfers
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
18th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

Purchase of Silver—Silver for coining was purchased in large quantities the following table showing the amount acquired by the Government of India in the last five years —

	In open Market (Standard Ounces)	From United States Dollar Reserve (equivalent in Standard Ounces)
1915-16	8 636 000	—
1916-17	124,585 000	—
1917-18	70,928 000	—
1918-19	106 410,000	152 518,000
1919-20 (to 30th November 1919)	14,108 000	60 875 000
Total	324 612 000	213,393 000

The total amount is thus 538 005,000 standard ounces.

Gold and silver were taken under control and measures taken to prevent export and melting. Gold went to a premium and ceased to function as currency. The Note issue was expanded and small Notes of one and two and a half rupees were specially prepared to economise the use of silver rupees. The nature of this expansion is shown below —

Date.	Lakhs of Rupees					Per centage of Total Metallic Reserve to gross Note Circula- tion
	Gross Note Circula- tion.	Composition of Reserve.				
		Silver	Gold.	Securities	Total.	
31st March 1914	66.12	20.53	31.59	14.00	66.12	78.9
„ 1915	61.63	32.34	15.29	14.00	61.63	77.8
1916	67.73	23.67	24.16	20.00	67.78	70.5
1917	86.38	19.22	18.67	48.49	86.38	43.9
1918	99.73	10.70	27.62	61.48	90.79	38.4
„ 1919	153.46	87.89	17.49	93.58	153.46	36.8
30th November 1919	179.67	47.44	32.70	99.53	179.67	44.6

The facilities for the encashment of Notes were reduced. In these ways the Government were able to maintain the broad convertibility of the Note issue and finance the essential trades and

expenditure for the Imperial Government. It often meant sailing very near to the wind, but these measures carried the country through the war.

V THE 1919 COMMITTEE.

The effect of these measures however was to justify the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below —

(5) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(iii) The reduction of the fineness or weight of the rupee the issue of 2 or 3 rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee as expedients that cannot be recommended.

(iii) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(iv) The rise in exchange in so far as it has checked and mitigated the rise in Indian prices has been to the advantage of the country as a whole and it is desirable to secure the continuance of this benefit.

(v) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If contrary to expectation a great and rapid fall in world prices were to take place and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(vi) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(vii) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(viii) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(ix) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(x) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign or in other words at the rate of one rupee for 11.80 016 grains of fine gold both for foreign exchange and for internal circulation.

(xi) If silver rises for more than a brief period above the parity of 2s (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills, (b) abstention from purchase of silver, (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(xii) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs when a trade demand for them exists there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorized to announce, without previous reference to the Secretary of State on each occasion their readiness to sell weekly a stated amount of Reserve Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(xiii) The import and export of gold to and from India should be free from Government control.

(xiv) The statutory minimum for the metal portion of the Paper Currency Reserve should be 40 per cent of the gross circulation.

As regards the fiduciary portion of the reserve the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 20 crores should be held in short-dated securities with not more than one year's maturity issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s to the rupee. The depreciation which will result from this revaluation cannot be made good at once but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(xv) With a view to meeting the seasonal demand for additional currency provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report—The main object of the Committee it will be seen was to secure a stable rate of exchange without impairing the convertibility of the Note issue and without debasing the standard silver rupee in India or substituting another coin of inferior metallic content which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold all other recommendations are subsidiary thereto. But in this they were not unanimous an important member of the Committee Mr. Dadabhai Dalal of Bombay appended a minority report in which he urged the adoption of the following course—

(a) The money standard in India should remain unaltered that is the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents Government should not manufacture silver rupees containing 165 grains fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(h) Reverse drafts on London to be sold only at 1s. 8d.-82d. The proceeds of Reverse drafts to be kept apart from all other Government funds and not to be utilized for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s. 4d.-32d. per rupee.

VL THE TWO SHILLING RUPEE

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling in view of the decline in the value of sterling that it should be linked at the rate of two shillings instead of the standard value, one and fourpence. All other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained and if the rupee were not to be debased it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupees in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field but for the sake of clarity in this narrative we shall concentrate on the main issue, the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarized in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbances of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action there was a sensational fall in the sterling exchange, as measured in dollars the dollar-sterling rate, inasmuch as America was the only free gold market being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence and weak at that. The gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils to take advantage of this high rate of exchange, the market rate jumped up to two shillings eightpence.

Effect of the Rise—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report, "It is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse."

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe which was starved of Indian produce and in urgent need of it had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export of foodstuffs, save to a limited extent in the case of wheat. On the other hand the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled an important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance but they were further handicapped by the variations of the sterling-dollar exchange which at one time took the rate for Reverse Councils to two shillings tenpence half penny. They sold two millions of Reverse Councils a week then five millions then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold—The first definite break from the recommendations of the Currency Committee came at the end of June when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate namely one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always two pence or three pence below the Reverse Council rate. This practice continued until the end of September when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence and it continued to range between these narrow points until the end of the year. The market made its own rate. It made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures—Apart from the effort to stabilise exchange which had such unfortunate results the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918 and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent of the Note issue. The invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further in order to give greater elasticity to the Note issue power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio were generally approved by the commercial public.

Results—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange checked the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan the lack of buying power on the Continent and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces. But they had their origin in the attempt by administrative action artificial and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade, the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand. Importers found themselves loaded up with imported goods bought in the expectation of the continuance of a high rate of exchange delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reserve Councils before abandoning

their effort to stabilise exchange at the new ratio the loss on three—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs 35 crores of rupees. Government sold £55 millions of gold without breaking or seriously affecting the premium on gold. The Secretary of State in the absence of any demand for Council Bills was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII COMMISSION OF 1925 26

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way and proved their ignorance went out of the field and the wholesome policy of leaving Exchange alone to find its natural level followed. Left alone Exchange established itself round about the old ratio of fifteen to one that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India a State Bank in all but name and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home charges when the conditions are favourable. Instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange of its own strength above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative. A resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi Bombay and Calcutta. It sailed for England in February 1926 and resumed its hearings in London and reported on July 1st 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms and they are textually reproduced in order that they may be above question—

- (1) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.
- (2) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.
- (3) The Central Banking functions should be entrusted to a new organisation referred to as the Reserve Bank.
- (4) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.
- (5) The outline of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.
- (6) Subject to the payment of limited dividends and the building up of suitable reserve funds the balance of the profits of the Reserve Bank should be paid over to the Government.
- (7) The Bank should be given the sole right of note issue for a period of (say) 20 years. Not later than five years from the date of the charter becoming operative Government notes should cease to be legal tender except at Government Treasuries.
- (8) The notes of the Bank should be full legal tender and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note.

(12) An obligation should be imposed by statute on the Bank to buy and sell gold with out limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces no limitation being imposed as to the purpose for which the gold is required.

(13) The conditions which are to govern the sale of gold by the Bank should be framed so as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(14) The legal tender quality of the sovereign and the half-sovereign should be removed.

(15) Government should offer on tap savings certificates redeemable in 2 or 5 years in legal tender money or gold at the option of the holder.

(16) The paper currency should cease to be convertible by law into silver coin. It should however be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency and of the Government to supply coin to the Bank on demand.

(17) One rupee notes should be introduced and should be full legal tender.

(18) Notes other than the one rupee note should be legally convertible into legal tender money or into notes of smaller denomination or silver rupees at the option of the currency authority.

(19) No change should be made in the legal tender character of the silver rupee.

(20) The Paper Currency and Gold Standard and Reserve should be amalgamated and the properties and composition of the combined Reserve should be fixed by statute.

(21) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the Reserve subject to a possible temporary reduction with the consent of Government on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the Reserve as soon as possible and to 25 per cent within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one half should be held in India.

(22) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(23) The balance of the Reserve should be held in self liquidating trade bills and Government of India securities. The created securities should be replaced by marketable securities within ten years.

(24) A figure of Rs 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(25) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(26) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free at its discretion to employ such method or methods of remittance as it may find conducive to smooth working.

(27) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(28) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India) as well as the banking reserves in India of all banks operating in India should be centralised in the hands of the Reserve Bank. Section 43 of the Government of India Act should be amended accordingly.

(29) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(30) During the transition period the currency authority (i.e. the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form of which the outline is suggested.

(31) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s 6d.

(32) The stamp duty on bills of exchange and cheques should be abolished. Bill forms in the English language and the vernacular in parallel should be on sale at post offices.

(33) Measures should be taken to promote the development of banking in India.

(34) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent—Whilst all the members of the Commission signed the report one of their number, Sir Purshotandas Thakordas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotandas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that through out the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency and that their efforts were emulated by successive Secretaries of State who had in view something which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshottamdas whilst recognising that the scheme proposed might be the ideal to be attained in process of time thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshottamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio and thus legally to restore the long current legal standard of money payments. This it declined to do and by limiting the supply of currency the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years namely one and fourpence. His conclusions were summarised in the following terms—

I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold which I have emphasised is recognised and steps taken to ensure it the gold bullion standard proposed will be the correct one and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s 6d is accepted and acted upon India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost and affect not only their stability and their progress but in certain cases their very existence. And should nature have in store for India a couple of lean years after the four good harvests that we have had during the period of forced adjustment to a rate of 1s 6d, the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of her people in the currency system recommended.

A Survey.—The official summary of the Report and the summary of the minute of dissent given above do not however convey an idea of the far reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1889. This was done in an article contributed to *The Bankers Magazine* by Sir Stanley Reed which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some retreading of the path laid out in the introductory section but this is unavoidable if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked—

What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist the late Sir Lionel Abraham who described it as a limping standard. The Royal Commission declares that in truth in so far as it amounted to a definite standard at all it was a standard of sterling exchange. Later they show that the automatic working of the exchange standard is thus not adequately provided for in India and a *vor* has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency. Under the Indian system contraction is not and never has been automatic.

However the standard limped along until the third year of the war. The exchange value of the rupee was stable, prices adjusted themselves to the ratio, Indian trade and industry developed. From the narrow standpoint of profit and loss the investment of the reserves instead of keeping them in gold resulted in a considerable gain to the finance estimated in 1925 at £17,000,000. But it had three great disadvantages. It did not inspire public confidence. It placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it, and it left the control of currency to the Government divorced from the control of credit by the Presidency Banks afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment when allowance has been made for all misunderstandings and misapprehensions the fact remains that a large measure of distrust in the present system is justified by its imperfections.

There is I think an inadequate appreciation of the influence on the Indian currency and exchange of the war and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917 when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely it took the former alternative, the price of Council drafts followed the price of silver. The effect of this would have been transitory but for the attempt in 1920 on the advice of the Barington Smith Committee to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event but if the Government had followed silver down as it followed silver up there is no room to doubt that the rupee would have returned to its permanent ratio with no more disturbance than was inevitable under war conditions. However this was not done. The vain effort to stabilise the new ratio was abandoned in September 1920 and the two shilling rupee has since been a legal fiction. Left free from administrative action the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests it has limbed upwards and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report "The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency and those acts are subject to no statutory regulation or control."

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee but the establishment of a standard which would command reasonable confidence in India to link the rupee to that standard and to provide for its statutory control automatic working and stability to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for a Gold Currency—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department but it is known to be the work of the Finance Member Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400s. bars as soon as sufficient gold was available to put a gold coin in circulation under a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees and after a further period also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees or 687 million fine ounces, in ten years, the acquisition in all of £108 millions of gold and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1½ crores.

This scheme is subjected by the Commission to a detailed examination and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain and the absorption by India of this £108 millions of gold in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest and gold prices throughout the world. The reaction on the silver market from the de-thronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China where India still does a large business. Moreover the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs. 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to predicate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in its life. Also that whilst London working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes but that gold should not circulate as money. It must not circulate at first and it need not circulate ever. In breaking adrift from any idea of a sterling exchange or gold exchange standard the Commission were powerfully influenced by two factors—the necessity for safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard. Its experience has been too painful. Proposals to that end would be rejected by the legislature and proving the currency controversy as it is desired to close. The gold bullion standard satisfies all the country's real needs. True it will not give it the gold mint and the gold currency which have long been demanded. It involves the demotion of the sovereign to which a sentimental influence attaches. But whilst it does not do these things it keeps the door open. No one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Paull Blackett's scheme which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point the proposals have India perfectly free to decide through her legislature where a gold currency is worth the expense.

We must however face the obligation which a gold bullion standard imposes on the currency authority in India. Indeed the Commission do not attempt to burke it. The obligation is to convert the currency not merely into foreign exchange, but into metallic gold and it is an obligation that is not as formerly conditional and circumscriptive but absolute and unblinked. Nevertheless it has been undertaken by every other country that has adopted an effective gold standard and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation with the measures of fortification, and at the time which we specify. It is important therefore to examine the reserves and the procedure thereon.

The reserves held for the purpose of maintaining the value of the token currency are two fold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30 1926 (the date taken by the Commission) was as follows—

Paper Currency Reserve	
	Rs Crores
Silver coin	77 0
Silver bullion	7 7
Gold coin and bullion	22 3
Rupee securities	57 1
Sterling securities	21 0
	185 1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee)

The Gold Standard Reserve amounts at present to £40,000,000 invested in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve accumulated from the profits on coining is designed to maintain the external value of the rupee. In practice their action is closely interlocked and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute, that gold and gold securities should form not less than 40 per cent of the whole, with 50 to 60 per cent as the ideal and that the holding of gold which now stands at about 12.8 per cent should be raised to 20 per cent as soon as possible and to 25 per cent in ten years. Generally they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise. An arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission Sir Purnohomdas Thakordas being the only dissenter recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated. It is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence. The Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August 1911.

One principle advanced in Sir Dadabhai Dalal's prophetic minority report in 1910 that the legal standard of money payments should be and usually is regarded as less open to repeal or modification than any other legislative Act will command general acceptance. But when Sir Dadabhai went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver but when it was not lowered as silver fell the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses and inflicted a terrible blow on trade after it was abandoned in September 1920 the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter under the influence of a succession of abundant harvests it recovered. In 1923 it was one shilling and fourpence sterling. In October 1924 one and sixpence sterling and one and four gold. With the rise in the pound to gold parity the rupee reached one and sixpence gold in June 1925 and has remained there.

It is not I think open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920 or if advantage had been taken of its return to one and four the permanent standard might have been re-established without undue disturbance. Sir Pureshotamdas Thakurdas asserts in his minute of dissent that the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed they have presented to us the case in this regard as a *fait accompli* achieved by them not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country.

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India, as it is a violent controversy will rage round this secondary issue obscuring the great merit of the Commission's basic recommendation a true gold standard statutory in its composition and automatic in action with the co-operation of the currency and credit authorities. However we have to deal with facts as we find them. The majority of the Commission base their recommendation on the conviction which has been formed and cumulatively reinforced during the progress of our inquiry that at the present exchange rate of about one shilling and sixpence prices in India have already attained a substantial measure of adjustment with those in the world at large and as a corollary, that any change in the rate would mean a difficult period of readjustment involving widespread economic disturbance which it is most desirable in the interests of the people to avoid and which would in the end be followed by no countervailing advantage. Sir Pureshotamdas Thakurdas in a closely reasoned minute of dissent supported by a wealth of figures avers—and to my mind with conclusive force that the adjustments are far from complete and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian Index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no ratio could be operative for over a year without

inducing this result. But it is clear that the adjustments especially in regard to wages in Western India are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle but is a matter of expediency.

Here it seems to me the decisive factor is the economic consequence of a return to one shilling and sixpence. There is no half way house; the rate must be either the *de facto* one of one and sixpence or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent, with a consequent reduction of real wages by that proportion which would be convulsive disturbance of the foreign trade; there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India because this is an influence which has been overvalued in the past. It is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six; the controversy which must ensue is part of the price to be paid for the effort to re-establish the permanent ratio when it was practicable.

The Currency Authority.—A feature in the Indian currency system little appreciated in Great Britain is the predominance of the Government. The Commission lay special stress on the disabilities this entails. India is perhaps the only country among the great trading countries of the world in which the Government exercises direct control over currency in general and over the note issue in particular. The banking and currency reserves of the country are thus separated. The Government controls the currency. The credit situation is controlled as far as it is controlled at all, by the Imperial Bank.

A volume might be written on this subject and on the controversy the prejudicial and political harm which it involved. However there is no useful purpose to be served by raking amongst these ashes though the curious will find much food for thought in the historical retrospect drawn entirely from official sources which forms the first part of Sir Pureshotamdas Thakurdas's minute of dissent. The Commission propose to establish harmony between these hitherto diverse interests—though there has been a slow working arrangement between the Government and the Imperial Bank of recent years and the Government has developed the note issue with skill and enterprise—by the establishment of a new Reserve Bank. A detailed scheme for the constitution and working of the Bank, understood to be the handiwork of Sir Henry Strakosch is embodied in the Report. The Reserve Bank with a capital of five crores of rupees, is to have the sole right

of the Note Issue, the responsibility for main-
taining the stability of the currency, the cus-
tody of the cash balances of the Government and
the duty of carrying through its remittances.
It is to act generally as a bank of the banks and
its principal function will be to re-discount
bankable bills held by the commercial banks.
Subject to the payment of limited dividends
and the building up of suitable reserve funds,
the balance of the profits is to be paid over to
the Government. In return for making over
the note issue and the reserves, the Government
is to nominate the managing governor and de-
puty managing governor and three members of
the Board—five members from a Board of
fourteen. In order to free the Bank from political
pressure the Commission think it desirable
to provide that no person shall be appointed
President or Vice-President of a Local Board
or shall be nominated as a member of the Central
Board if he is a member of any of the legis-
latures.

The main principle underlying this recom-
mendation is not open to question. It is of para-
mount importance to remove the Indian cur-
rency system from official management and to
link the control of currency with the control of
credit. This *commits the establishment of a*
Central Bank. But it is not the complete lesson
that far from it.

India is sometimes spoken of as the sink for the
precious metals. So long as she chiefly absorbed
silver, the West looked on with benevolent
approval, now she is turning to gold the atti-
tude is different. Indian capital is sometimes
described as inadequate and timid. But critics
do not realise that the banking organisation of
the country is so hopelessly inadequate that
hundreds of millions of people have no secure
refuge for their store of value other than gold and
silver hoarded in their own possession. The
Exchange Bank cling to the seaports. The
indigenous banks follow their example. The
Imperial Bank is the only organisation which can
carry reliable credit facilities into the interior.
The old Presidency Banks were lamentably slow
in exercising this responsibility. The pace has
been quickened and as the price of the free use
of the Government balances the Imperial Bank
was called upon to open a hundred new branches.
The total number of its branches is yet only a
hundred and sixty four and it was stated by a
competent banking authority in evidence
before the Commission that India needed at least
five thousand.

This extension of banking facilities is of trans-
cendental importance. In an address to the
University of Delhi last year Sir Basil Blackett
committed himself to a remarkable statement.

To some it may sound fantastic, in view of this
historic habit—reliance on external capital—to
talk of India's not supplying the whole of her
own capital requirements but also becoming a
lender of capital for the development of other
countries. Yet I believe firmly that given the
necessary development of banking and credit
facilities and goodwill and readiness to profit
by the counsel and assistance of European busi-
nessmen, the time is not very far distant when
India will be doing both these things. India
would seem by nature to be destined to be
a creditor country if only her people will it so.

But Indian resources will not be mobilised
without the vehement development of branch
banks.

As matters stand this work can only be done
by the Imperial Bank, and though it is moving
it is with desperate slowness. There are one or
two features common to most of the hundred
new branches it has opened. They attract
deposits, they facilitate the investment habit,
but they do not pay. To many who are in close
touch with Indian conditions it seems that any
measure which would weaken the capacity of the
Imperial Bank to prosecute this unremunera-
tive but imperatively necessary work by the
diversion of the Government balances to the
Indian Reserve Bank or the diversion of these
balances between the two banks would be a
retrograde measure. There are other consid-
erations. The amount of re-discounting to be done
in India is not large as the Exchange Banks
which finance the export trade re-discount in
London which is always likely to be the cheaper
market. The number of men in India qualified to
act on the discounting of banks is small. Are
there enough to constitute the reliable direc-
torates for two great banking institutions? The
Commission rather glow over these difficulties.
They think that the Reserve Bank will be able to
spare for the Imperial Bank sufficient funds from
the Government balances to enable it to prosecute
the work of opening new branches, also that a
bill market will rapidly develop. But their argu-
ments wear an aspect of special pleading. How-
ever, the issue can be put in a nutshell. India
must have a Central Bank. It is found impos-
sible to develop even as a temporary measure
the Imperial Bank into a Central Bank then there
must be a Reserve Bank on the lines sketched
in the Report. But if a new Reserve Bank is
established, it is essential that provision shall
be made for the Imperial Bank to enjoy the free
use of a sufficient share of the Government
balances to enable it vigorously to develop bank-
ing facilities in the interior and this obligation
should be made compulsory.

The Note Issue—Before the war there
was a considerable and growing circulation of
sovereigns. On the outbreak of hostilities these
disappeared as currency, the actual currency of
India is a token silver rupee and another
token the note convertible into rupees. Ever
since the breakaway from the accepted gold
standard this obligation has imposed serious
difficulties on the currency. It drove it into
the very heavy coinage which followed recovery
from the famine of 1899-1900. It compelled
heavy purchases of silver which invariably rose
in price as the Government came into the
market, and it placed the Indian currency sys-
tem as occurred during the war at the mercy
of the silver market. The maintenance of the
convertibility of the note into silver rupees
of the present fineness is only possible so long
as silver does not rise above 48½ an ounce. The
removal of this anomalous provision the Com-
mission say is an essential step in Indian cur-
rency reform which must be taken sooner or
later. No opportunity for the termination of
this obligatory convertibility is likely to be so
favourable at the present when by making the
notes convertible into gold bars for all purposes,
a more solid right of convertibility is attached

to them than they have ever had since silver ceased to be a reliable standard of value. Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself. It was always convertible on demand, but from increased facilities for the cashment of notes beginning with the introduction of universal notes of small denomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them. There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions from the bulk and weight of the amount of currency required.

The Commission therefore proposes that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank and coincidentally the one-rupee note which had acquired great popularity before it was discontinued on the ground of economy should be re-issued. The legal obligation on the Central Bank will be to give legal tender money either notes of smaller denominations or silver rupees at its option, but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surplus of rupees the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and billion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers Magazine* which we have quoted extensively above. There was a considerable protest strongest in Western India but shared in other parts of the country against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was particularly in Bombay a reluctance to agree to the establishment of the Reserve Bank coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central

Bank, with the functions proposed to be re-allocated to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League with branches in other parts of India whose main efforts were directed to the ratio and to the idea that the legal ratio should be one and four not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 14th the Government of India issued a notification to the following effect—

After considering the report of the Royal Commission on Indian Currency and Finance the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session.

The new Ratio—So far from closing the discussion this notification intensified it. Feeling ran high on the subject of the ratio. Considerable interests in the country being sustained that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten ples per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or at the option of Government sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence fourteen sixths was notified as Government's selling rate for sterling, to meet these obligations.

Although mutterings are still heard and the textile interests of Western India that the depression from which they are suffering is in considerable part the outcome of the new rate exchange was firm for the remainder of the year the fluctuations being of little account. So far as outward signs are conspicuous, the new rate is well established.

The character of the Reserves which are the backbone of the Indian currency system are shown below—

Composition of the Currency Reserve held against the note circulation at the end of each month (In lakhs of rupees)

MONTH.	COIN AND BULLION RESERVE									
	Gross circulation of notes	Silver coin in India	Gold coin and bullion in India	Silver bullion under coinage	Gold coin and bullion in England	Silver bullion in England	Gold coin and bullion in His Majesty's Dominions	Gold coin and bullion in transit between India and England and His Majesty's Dominions	Silver bullion in transit between India and England and His Majesty's Dominions	Standing reserves in England, India, and elsewhere

Statistics etc. regarding the Gold Standard Reserve

The total receipts from profits on coinage interest and discount and profit by exchange up to 31st March, 1927 were as follows —

Profits on coinage—from 1900 to 1927	£ 28 573 806
Interest and discount	23 312 554
Profit by exchange	194 917
	52 081 077

Of this sum £1 123 855 has been used for capital expenditure on railways the remainder out of which £2 886 117 has been transferred to the Paper Currency Reserve in reduction of created Rupee securities and £8 471 738 has been transferred to Revenue has been credited to the Reserve The following table shows the disposal of the sums paid to the Reserve up to 31st March 1927 and the composition of the Reserve on that date —

Summary of transactions	State of Reserve 31st March 1927
Profits on Coinage paid to Gold Standard Reserve—	Sterling Securities held in England (£ estimated value)
Total Profits realized since 1st April 1900	National War Loan 1 996 013
Deduct amount used for Capital Expenditure on Railways	National War Bonds 8 275 843
	Treasury Bonds 2, 167 840
	Treasury Bills 5 810 478
Interest and discount received up to 31st March 1927	
Profit by exchange	38 299 683
Profit through appreciation	Gold deposited at Bank of England 1 730 134
	Cash held in England 183
Profits and Interest paid to Reserve from 1st April 1900 to 31st March 1927	
Deduct—	
Loss on Sale Redemption and Conversion of Securities	
Transferred to Paper Currency Reserve in reduction of created securities	
Transferred to Revenue	
Miscellaneous Charges	
Amount of Reserve on 31st March, 1927	

THE RESERVE BANK

An essential part of the scheme formulated by Currency Commission was the formation of a Reserve Bank to take over the Note Issue custody of the Government resitances and act as a true banker's bank. The Commission pointed out that India was one of the few great countries where the control of currency was divorced from the control of credit and where Government carried out immense financial transactions through its own agency and propose the Reserve Bank as the apex of the new financial system.

The Government accepted these recommendations and in January 1927 introduced a Bill to give effect to the Commission's advice. They proposed a shareholders bank with a commercial directorate tempered by Government nominees, and a new agreement with the Imperial Bank freeing it from some of the restrictions imposed. The Bill was referred to a Select Committee when a marked divergence of opinion was manifested. A majority of the Committee carried recommendations for the transference of a shareholder bank into a State Bank with a strong element of directors selected by the legislatures. This changed Bill was before the legislature in September and was withdrawn by the Government for further consideration. It being understood that the Secretary of State for India objected to the drastic changes made in the original scheme.

These objections to the original scheme have been summarised under the following heads: That a Reserve Bank in charge of the credit and currency should be responsible to the legislature; that only a State Bank would carry the confidence of the people; that a Reserve Bank does not require much capital, and therefore there was no need to create a body of shareholders; and that if a bank with share capital was created there was the risk of it falling under the domination of foreign capitalists or of Indian capitalists in the big cities.

The real ground of objection was the first: the legislature sought to make the Bank responsible to the legislature; that opened the great question whether the Reserve Bank should be commercial or political.

The New Bill. After conferring with the authorities in London the Finance Member published in January 1928 the draft of an entirely new Bill. On the main point it was uncompromising. It provided for a shareholder's bank with a capital of five crores of rupees and it entirely excluded political interest in the management by stipulating that members of the legislatures were precluded from becoming directors. On all other points it sought to meet the objections to the original scheme. The provisions in this respect governed the directorate and the qualifications for shareholders, as these are important they are set out here—

The Shareholders.—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) No amount in excess of twenty thousand rupees shall be issued to any one person or to any two or more persons jointly, and no person shall be allowed to acquire an interest in the share capital of the Bank, whether held in his own right, or held jointly with others, or held partly in his own right and partly jointly with others, to a value in excess of twenty thousand rupees.

(3) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Madras, Rangoon and Delhi and a separate issue of shares shall be made in each of the areas served by these registers as hereinafter defined and shares shall not be transferable from one register to another save in accordance with conditions to be prescribed by the Governor General in Council.

(4) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register or as a holder of an interest in the share capital of a total nominal value exceeding twenty thousand rupees, and no person who is not—

- (a) domiciled in India, or
- (b) a British subject ordinarily resident in India, or

(c) a company registered under the Indian Companies Act 1914 or a society registered under the Co-operative Societies Act 1912, or a scheduled bank or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any of His Majesty's dominions and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share.

Management.—The essential clauses of the Bill relating to the management of the Bank are—

The general superintendence of the affairs and business of the Bank shall be entrusted to a Board of Directors which may exercise all powers and do all such acts and things as may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

Save as expressly provided in this Act—(a) no person may be a Director who is not or has not at some time been—(1) actively engaged in agriculture, commerce, finance or industry, or (2) a director of any company as defined in clause (2) of section 2 of the Indian Companies Act 1913, or of a corporation or company incorporated by or under any law for the time being in force in any place outside British India; and (b) no person may be a Director who is—(i) a government official, or (ii) an officer or employee of any bank, or (iii) a director of any bank other than a registered society as defined in clause (c) of section 2 of the Co-operative Societies Act 1912.

The election or appointment as Director of any person who is a member of the Indian Legislature or of a local Legislature shall be void, unless within one month of the date of his election or appointment he ceases to be such member, and if any Director is elected or nominated as

number of any such Legislature he shall cease to be a Director as from the date of such election or nomination as the case may be.

The Board shall consist of the following Directors namely—(a) a Governor and two Deputy Governors to be appointed by the Governor General in Council after consideration of any recommendation made by the Board in that behalf (b) four Directors to be nominated by the Governor General in Council (c) two Directors to be elected by the Associated Chambers of Commerce (d) two Directors to be elected by the Federation of the Indian Chambers of Commerce (e) one Director representing the interest of agriculture to be elected by provincial co-operative banks holding shares to the nominal value of not less than five thousand rupees (f) eleven Directors to be elected on behalf of the shareholders on the various registers (g) one government official to be nominated by the Governor General in Council

The shareholders registered on the various registers shall elect delegates for the purpose of electing Directors to represent them on the Board and the numbers of delegates shall be as follows namely—(a) for the Bombay register—twenty four members (b) for the Calcutta register—twenty four members (c) for the Madras register—ten members (d) for the Rangoon register—ten members (e) for the Delhi register—twenty four members

The election of delegates for the shareholders on a register shall be held once in every five years at a convenient time before the expiry of the term of office of the retiring Directors for the election of whose successors the delegates are to be elected

(5) Delegates shall hold office for a period of five years

Reception of the Bill—When the Bill was published many of those who were opposed to the original scheme seemed to be chary of committing themselves to an opinion. But the general attitude may be fairly indicated in these terms. By those who accepted the idea of a shareholder's bank the Bill was regarded as a considerable improvement inasmuch as it safeguarded the country against either alien or capitalist control and gave every part of the country and every important interest representation on the directorate. Those who wanted a State or in other terms a political bank stood fast in their opposition and objected the scheme root and branch. There was the further criticism that the original bill having passed through Select Committee and been discussed in the Legislature it was unconstitutional to withdraw it and substitute a fresh measure. The correct procedure they maintained was for the original Bill as amended by the Select Committee and the Legislature to be proceeded with. That was the position on the eve of the meeting of the Legislature early in February 1929.

Agriculture.

As crops depend on the existence of plant food and moisture in the soil, so the character of the agriculture of a country depends largely on its soil and climate. It is true that geographical situation, the character of the people and other considerations have their influence which is not inconsiderable, but the limitations imposed by the nature of the soil and above all by the climate tend to the production of a certain class of agriculture under a certain given set of conditions.

The climate of India, while varying to some extent in degree in most respects is remarkably similar in character throughout the country. The main factors in common are the monsoon, the dry winter and early summer months and the intense heat from March till October. These have the effect of dividing the year into two agricultural seasons the *Kharif* or Monsoon and the *Rabi* or Winter Season each bearing its own distinctive crops. From early June till October abundant rains fall over the greater part of the continent while the winter months are generally dry although North Western India benefits from showers in December and January. The distribution of the rainfall throughout the year which is of considerable importance to agriculture, is none too favourable, but is not quite so bad as is often represented. The rainfall is greatest at what would otherwise be the hottest time of the year viz. mid-summer and when it is most needed. It should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. The distribution of rainfall such as is common in England for example would be of little use to Indian soils.

Soil.—For the purpose of soil classification India may be conveniently divided into two main areas in (1) The Indo Gangetic plains (2) Central and Southern India. The physical features of these two divisions are essentially different. The Indo-Gangetic plains (including the Punjab Sind the United Provinces, Bengal Bihar and Assam) form large level stretches of alluvium of great depth. The top soil varies in texture from sand to clay, the greater part being a light loam porous in texture easily worked and naturally fertile. The great depth of the alluvium tends to keep down the soil temperature. Central and Southern India on the other hand consist of hills and valleys. The higher uplands are too hot and too near the rock to be suitable for agriculture which is mainly practised in the valleys where the soil is deeper and cooler and moisture more plentiful. The main difference between the soils of the two tracts is in texture and while the greater part of the land in Northern India is porous and easily cultivated and moist near to the surface large stretches in Southern and Central India consist of an intractable soil derived from the Deccan trap, sticky in the rains hard and crumbly in the dry weather and holding its moisture at lower levels.

Agricultural Capital and Equipment.—India is a country of small holdings and the vast majority of the people cultivate patches varying in size from one to eight acres. Large holdings are practically unknown, and are mainly

confined to the planting industries. Farming is carried on with a minimum of capital there being practically no outlay on fencing, building, or implements. The accumulation of capital is prevented by the occurrence of famine and the high rate of interest and extravagance of expenditure in marriage celebrations. The organization of co-operative credit which has been taken in hand by Government and which has already proved successful in many provinces will undoubtedly lead to an increase in Agricultural capital.

Equipment.—For power the ryot depends chiefly on cattle which, as a rule, are light and active but possess little hauling power. The necessary till for crops is brought about by frequency of ploughings the result being that the soil is seldom tilled as it should be. This is not chiefly due to want of knowledge on the part of the people but through want of proper equipment. The Indian agriculturist as a rule possesses an intimate though limited knowledge of the essentials of his own business, and fails not only through ignorance but also through lack of ways and means.

Implements. are made of wood although ploughs are usually tipped with iron points, and there is a great similarity in their shape and general design. The introduction of iron ploughs has made much progress in the last few years and many hundred thousands are now in use. The levelling beam is used throughout the greater part of the country in preference to the harrow and roller and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

In the heavier soils of the Deccan trap a cultivating implement consisting of a single blade resembling in shape a Dutch hoe, is much used. Seed drills and drill hoes are in use in parts of Bombay and Madras but throughout the greater part of the country the seed is either broadcast or ploughed in. Hand implements consist of various sizes of hoes the best known of which are the *kodal* or spade with a blade set at an angle towards the labourer who does not use his feet in digging and the *khurpi* or small hand hoe. Of harvesting machinery there is none grain is separated either by treading out with oxen or beating out by hand and winnowing by the agency of the wind.

Cultivation.—Cultivation as its best is distinctly good but in the greater part of the country it has plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people depending largely as it does on thrift and industry. In most places considering the large population cultivation is none too good. Agriculture suffers through lack of organization and equipment. Owing to the necessity of protection against thieves in most parts the people live in villages, many of them at considerable distances from their land. Again holdings, small though they are have become sub-divided by the Indian laws of inheritance without any regard for convenience, although very definite attempts are now being made by some of the Provincial Governments to remedy this evil by new legislation. Preparatory tillage

AGRICULTURAL PRODUCE

The following table shows the area under the principal crops in British India, and their territorial distribution for 1925-26. The down area is always greater than the area of cultivated land owing to double cropping. The figures represent acres —

Province	Rice	Wheat	Barley	Other Food Grains and Pulses	Total Food Grains and Pulses	Oilseeds	Sugar	Cotton	Jute	Total Area sown	Net sown Area after deducting Area sown more than once

* Includes 848 246 acres for which details are not available

generally consists of repeated ploughings followed as seed time approaches by harrowings with the levelling beam. The *Rabi* crops generally receive a more thorough cultivation than the *Kharif*, a finer seed bed being necessary owing to the dryness of the growing season. Manure is generally applied to more valuable crops like sugarcane, cotton tobacco etc. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well done as they might be, and intercultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole and there is little waste involved. On the whole the methods of the ryot if carried out thoroughly would be quite satisfactory but it is doubtful if this could be done with the number and quality of cattle at his disposal.

Irrigation is necessary in order to grow full crops on the land over a large part of the country owing to insufficient rain fall and the vagaries of the monsoon. Canal irrigation has been greatly extended over the Punjab Sind United Provinces and Madras through Government canals which in addition to securing the crops over existing cultivated land have converted large desert tracts into fertile areas. The Punjab and parts of the United Provinces are naturally well suited to canal irrigation owing to the frequency of their rivers. The water is generally taken off at a point a little distance from where the rivers leave the hills and is conducted to the arid plains below. The main canal splits up into diverging branches which again subdivide up into distributaries from which the village channels receive their supplies. Water rates are levied on the matured areas of crops. Government thus bearing a part of the loss in case of failure. Much of the land is supplied by what is termed *flow irrigation*, i.e., the land is directly commanded by the canal water but a great deal has to be lifted from one to three feet the canal running in such cases below the level of the land. Rates for lift irrigation are of course lower than those for flow.

Irrigation canals are generally classed into (1) perennial and (2) inundation canals. Perennial canals, which give supplies in all seasons generally have their headworks near the hills, thus commanding a great range of country. Farther from the hills, owing to the very gradual slopes of the land and the lowness of the rivers in the cold weather perennial irrigation is difficult and inundation canals are resorted to. These canals only give irrigation when the rivers are high. As a rule in Northern India they begin to flow when the rivers rise owing to the melting of the snow on the hills in May and dry up in September.

At the present time the Bombay Presidency possesses the most spectacular irrigation schemes in India—if not in the world. The Lloyd Dam at Bhatgar 180 feet high, will have the greatest cubical contents of any masonry wall in the world. The Wilson Dam at Bhandardara impounding 272 feet of water is far and away the highest dam in India, whilst the Sukkur Barrage in Sind across the Indus will irrigate a desert whose area far exceeds that of any other scheme conceived by engineers.

Irrigation from Wells.—About one quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

The Bombay Government have lately decided to mark time more or less on major irrigation schemes, however, and to concentrate on the construction of new wells and tanks and the repairing of old and dilapidated ones. An official Water Diviner with wide experience has been appointed to locate underground water supplies especially in the dry or famine areas and is meeting with excellent success.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. The system of distribution is the same as that by canal.

Manures.—Feeding of animals for slaughter being practically unknown in India, the amount of farm yard manure generally available in other countries from this source thus does not exist. This is partially if not entirely made up for by the large numbers required for tillage and the amount of cows and buffaloes kept for milk. Unfortunately fuel is very scarce and a greater part of the dung of animals has to be used for burning. Most of the trash from crops is used up for the same purpose and the net return of organic matter to the soil is thus insignificant. In some parts cakes of oil seed are used as manures for valuable crops like tea and sugarcane but in the greater part of the country the only manure applied is the balance of farm yard manure available after fuel supplies have been satisfied. Farm yard manure is particularly effective and its value is thoroughly appreciated but the people have much to learn in the way of storage of bulky manures and the conservation of urine.

Though much of the cultivated land in India is naturally fertile the soil over large areas has been impoverished as a result of its being cropped year after year without manure. Various kinds of natural and artificial manures have been tested on Government farms and a small demand for them created by demonstrating their use in villages. The demand for artificial fertilizers is on the increase, and although a large portion of them goes to tea and coffee plantations, larger quantities are now being applied also to such valuable crops as sugarcane cotton and tobacco. The chief artificial fertilizers now in use are sulphate of ammonia, calcium cyanamide and nitrate of soda.

Rice.—A reference to the crop statistics shows that rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, viz., in Bengal, Bihar and Burma and Madras. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous, differing greatly in qua-

lity and in suitability for various conditions of soil and climate and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon. Broadcasted rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rice grows quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a puddle before the seedlings are transplanted. The land is laid out into small areas with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each and are simply dibbled into the mud at distances of 6 to 12 inches apart. Where available irrigation water is given at frequent intervals and the fields are kept more or less under water until the crop begins to show signs of ripening.

Wheat—Wheat is grown widely throughout Northern India as a winter crop. The United Provinces and the Punjab supplying about two thirds of the total area and probably three quarters of the total output in India. The majority of the varieties grown belong to the species *Triticum Vulgare*. Indian wheats are generally white red and amber coloured and are mostly classed as soft from a commercial point of view. The grains are generally plump and well filled but the samples are spoiled through mixtures of various qualities. Indian wheat is generally adulterated to some extent with barley and largely with dirt from the threshing floor and although there is a good demand in England and the Continent for the surplus produce, prices compare unfavourably with those obtained for Canadian and Australian produce. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing go on up till the end of May. In good years the surplus crop is bought up at once by exporters and no time is lost in putting it on the European market as other supplies are at that time of year scarce. In years of famine the local price is generally sufficiently high to restrict exports.

The Millets—These constitute one of the most important group of crops in the country supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climate and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) tall growing with a large open head and Bajra with a close rat-tail head and thin stem. Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure

usually applied and cultivation is not so thorough as for wheat, the main objective being to produce a fine seed bed. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded. In the case of jowar however very large areas are sown as a *rahi* crop. It is often grown mixed with the summer pulses and other crops in which case thin seedlings are resorted to. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. The produce is consumed in the country.

Pulses are commonly grown throughout India and the grain forms one of the chief foods of the people. Most kinds do well but are subject to failure or shortage of yield owing to a variety of circumstances, among which rain at the time of flowering appears to be one of the most important. They are therefore more suitable to grow as mixed crops especially with cereals and are generally grown as such. Being deep rooted and practically independent of a Nitrogen supply in the soil they withstand drought and form a good alternation in a cereal rotation. The chief crops under this heading are gram, mash, mung and moth, gram forming the main winter pulse crop while the others are grown in the summer. The pulses grow best on land which has had a good deep cultivation. A fine seed bed is not necessary for gram especially the soil should be loose and well aerated. Indian pulses are not largely exported although they are used to some extent in Europe as food for dairy cows.

Cotton is one of the chief exports from India and the crops widely grown in the drier parts of the country. The lint from Indian cotton is generally speaking short and coarse in fibre and unsuited for English mills. Japan and the Continent have in the past been the chief buyers. The crop is grown during the summer months and requires a deep moist soil and light rainfall for its proper growth. Rain immediately after sowing or during the flowering period is injurious. In parts of Central Western and Southern India the seed is sown in lines and the crop receives careful attention but over Northern India it is sown broadcast (often mixed with other crops) and from the date of sowing till the time of picking is practically left to itself. The average yield which does not amount to more than 400 lbs. per acre of seed cotton could doubtless be greatly increased by better cultivation.

Sugarcane—Although India is not naturally as well suited for sugarcane growing as many other tropical countries, some 3½ millions of acres are annually sown. The crop is mostly grown in the submontane tracts of Northern India. The common varieties are thin and hard yielding a low percentage of juice of fair quality, but cane of the highest quality and yield is grown in South India. In India white sugar is not made by the grower who simply boils down the juice and does not remove the molasses. The product called gur or gul is generally sold and consumed as such although in some parts a certain amount of sugar-making is carried on. The profits however, are small owing to the cheapness of imported sugar and there appears to be some danger to the crop if the present taste for gur were to die out. The

† For Calendar Year 1924

question has been taken up by Government and a cane breeding station has been recently opened near Calcutta in Madras with the object of raising seedling canes and otherwise improving the supply of cane sets. A number of sugar factories of a modern type have been set up within recent years in Bihar and the United Provinces and more recently in Bombay. The chief difficulty seems to be the obtaining of a sufficiently large supply of canes to offset the heavy capital charges of the undertakings.

Oilseeds—The crops classified under this heading are chiefly sesamum, linseed and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature—they cover an immense area.

Linseed requires a deep and moist soil and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe. The yield varies greatly from practically nothing up to 500 or 600 lbs. of seed per acre. The seed is mainly exported whole but a certain amount of oil pressing is done in the country.

Sesamum (or Gingelly) is grown mostly in Peninsular India as an autumn or winter crop. The seed is largely exported.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state of development. They are one of the most useful crops in the rotation. They occupy the land for a few months only and owing to their dense growth leave the soil clean and in good condition after their removal. A number of varieties are grown differing from each other in habit of growth, time of ripening and size and quality of seed. The best known are rapeseed and sarson. The crop is generally sown in September or early October and harvested from December to February. The crop is subject to the attack of aphids (green fly) at the time of flowering and sometimes suffers considerable damage from this pest. The seed is subject to injury from rain and great care has to be taken in the drying. The produce is largely exported whole but there is a considerable amount of local oil pressing—the cake being in demand for feeding purposes.

Jute—Two varieties of the plant are cultivated as a crop. *Capularis* and *Qitortus*. Jute growing is confined almost entirely to Eastern Bengal in the Ganges-Brahmaputra Delta. The crop requires a rich moist soil. Owing to river inundation this part of India receives a considerable alluvial deposit every year and the land is thus able to sustain this exhausting crop without manure. The crop is rather delicate when young, but once established requires no attention and grows to a great height (10 to 11 feet). Before ripening the crop is cut and retted in water. After about three weeks submersion the fibre is removed by washing and beating. At the recent high range of prices jute may be considered to have been, for the last few years, the best paying crop in India.

Tobacco is grown here and there all over the country chiefly however in Bengal, Bihar, Bombay, Madras and Burma. Of two varieties cultivated *Nicotiana Tabacum* is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attention necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of say 2 ft. and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. By varying the degree of fermentation of the leaves different qualities of tobacco are obtained. A black tobacco is required for *Hooka* smoking and this is the most common product but a certain amount of yellow leaf is grown for cigar making.

Live-stock consist mainly of cattle, buffaloes and goats. Horses not being used for agricultural purposes. Sheep are of secondary importance.

For draught purposes cattle are in more general use than buffaloes especially in the drier parts of the country but buffaloes are very largely used in the low lying rice tracts. For dairying buffaloes are perhaps more profitable than cows as they give richer milk and more of it but they require more feeding. The poorer people depend largely on the milk of goats of which there are an enormous number throughout India. Cattle breeding is carried on mainly in the non-cultivated tracts in Central and Southern India, southern Punjab and Rajputana where distinct breeds with definite characters have been preserved. The best known draught breeds are Hansi, Nellore, Muntmel, Gujrat, Malvi and the finest milk cows are the Saniwal (Punjab), Gir (Kathiawar) and Sind. Owing however to the encroachment of cultivation on the grazing areas well bred cattle are becoming scarce and some of the breeds are threatened with extinction. Efforts to improve the quality of the cattle in the non-breeding districts by the use of selected bulls have hitherto been frustrated by the promiscuous breeding which goes on in the villages.

The Government of India and all the Provincial Governments have now however turned their attention to the great problem of cattle breeding and have instituted a number of special farms where high class stud animals are kept. In most cases these studs are sent into villages to serve cows free on the one condition that the progeny are not allowed to deteriorate and that details of their history are given to the superintendent of the farm. Cattle-breeding however is naturally a very slow process and so no appreciable improvement in the draught and milch animals of the country can be expected for many years, even though the official and non-official schemes now in operation continue to be as enthusiastically received in the villages as they are at present.

Dairying—Though little noticed dairying forms a very large indigenous industry throughout India. The best known products are native butter (ghae) and cheese (dahl). During recent years a considerable trade in tinned butter has sprung up in Gujrat (Bombay Presidency). While pure ghae and milk can

be procured in the villages in the towns dairy products can scarcely be bought unadulterated. The Government of India have opened an up-to-date Creamery and Butter Factory at Anand and an Institute of Animal Husbandry and Dairying at Bangalore where students are given courses for the Indian Dairy Diploma.

(a) Includes an area of 332 660 acres of the Balipara Frontier tract for which details are not available.

AGRICULTURAL PROGRESS

The Agricultural Departments in India as they now exist may be said to be a creation of the last twenty years. There have for a good many years past been experimental farms under official control, in various parts of India, but they were in the past to a large extent in the hands of amateurs, and the work of the Agricultural Departments with which all the major provinces were provided by about 1884, was in the main confined to the simplification of revenue settlement procedure and the improvement of the land records system. In 1901 the appointment of an Inspector General of Agriculture gave the Imperial Agricultural Department for the first time an expert head and placed the Government of India in a position to enlarge the scope of their own operations and to co-ordinate the work being done on independent lines in various provinces. At that time the staff attached to the Government of India consisted of an Agricultural Chemist and a Cryptogamic Botanist, while trained Deputy Directors of Agriculture were employed only in Madras, Bombay and the United Provinces and the Broomfield Botanist in Madras was the only provincial representative of the more specialised type of appointments. Within the next few years a number of new appointments were made so that by March 1906 there were altogether 20 sanctioned agricultural posts of these, seven were Imperial. Including a number of specialist appointments attached to the Agricultural Research Institute and College the establishment of which at Pusa in Bengal was sanctioned in 1903. A great impetus was given to the development of the Agricultural Departments by the decision of the Government of India in 1905 to set apart a sum of 20 lakhs (£133,000) a year for the development of agricultural experiment, research, demonstration and instruction. Their ultimate aim, as then expressed, was the establishment of an experimental farm in each large tract of country in which the agricultural conditions are approximately homogeneous to be supplemented by numerous small demonstration farms, the creation of an agricultural college teaching up to three years' course in each of the larger provinces, and the provision of an expert staff in connection with these colleges for purposes of research as well as education. The original cost was recognised would largely exceed 20 lakhs a year. The Pusa Research Institute and College alone has cost nearly ±150,000 including equipment. A part of the cost was met from a sum of £20,000 placed at Lord Curzon's disposal by Mr. Phipps, an American visitor to India. This example of munificence has recently been followed by Sir Saseoon J. David who placed the sum of £58,800 at the disposal of the Government of Bombay for the establishment of vernacular agricultural schools and the improvement of agricultural methods in commemoration of the visit of Their Imperial Majesties to India.

Prior to 1921 the policy of agricultural development in India as a whole was guided by the Government of India but with the inception of the Reforms in 1921 agriculture became a

transferred subject and provincial Governments were granted autonomy in respect of the policy of agricultural development in their provinces. The central Government, however, still concerns itself with agricultural problems of all India importance and maintains the following institutions under the administrative control of the Agricultural Adviser to the Government of India—(1) the Agricultural Research Institute Pusa (2) the Imperial Institute of Veterinary Research Muktesar (3) and (4) the Imperial Institute of Animal Husbandry and Dairying, Bangalore and Wallington (5) the Imperial Cattle Breeding Farm Jamal (6) the Creamery at Anand (7) the Imperial Cane Breeding Station Colmahator and (8) the Sugar Bureau Pusa.

The net annual expenditure of the Imperial Department of Agriculture is about Rs. 9,50,000 or about £,00,000 while that of the Provincial Departments of Agriculture is Rs. 78,66,000 or about £,54,600. The total net expenditure of the agricultural departments in India is therefore about £8,15,000 or about one half penny per acre per annum.

Recent Progress—A survey of the results of the activities of the Agricultural Department including the Central Research Institute at Pusa and the Provincial departments in relation to the chief crops of India shows valuable results. Of all the grain crops of India, rice stands first in importance, and its yield is a vital factor in the welfare of the land. The Department is devoting much attention to the evolution and introduction of improved varieties. An area of 150,000 acres is now grown with the heavy yielding races of Indrasail, Dudsar and Katakara in Bengal alone while some of the selected strains are steadily gaining ground in other provinces. The hybridisation of a race of transplanted rice shows promising results.

Wheat is the next important crop. The types evolved by the Agricultural Departments possess high yielding and rust-resisting qualities and good milling and baking properties are becoming very popular all over the land and give satisfactory results even under adverse conditions. Some of the new series of bearded wheats evolved at Pusa for tracts of country where the crop is liable to damage by birds possess equally satisfactory milling and baking qualities and yield as heavily as the popular Pusa wheat (12 and 4).

With a view to meeting India's requirements of refined sugar which are greater than her production the Agricultural Department is vigorously experimenting on high yielding canes. Some of the new varieties evolved at Colmahator Cane Breeding Station are doing remarkably well and Colmahator 210, 213 and 214 the demand for which far exceeds supply have well established their superiority over the old indigenous canes. Experiments are also with the aid of the Indian Sugar Producers' Association, being made with field and factory tests on all the more promising seedlings.

There has recently been a considerable increase in the area under cotton, especially raw cotton, a high ginning quality. The Indian Central Cotton Committee, representative of all branches

of growing manufacturing and trading industries, is co-operating with the Departments of Agriculture in the Provinces and with allied institutions to which it has given grants in aid for the investigation of scientific problems relating to cotton. It has also established a Technological Laboratory including an experimental spinning plant and research laboratory in Bombay. The laboratory will, it is hoped, prove of great value to cotton workers in furnishing accurate information regarding the spinning qualities of new strains. At the instance of the Committee, a Cotton Transport Act has been passed by the Indian Legislature to regulate the transport of raw cotton and thus prevent the adulterations of long-staple crops by the admixture by merchants of coarse varieties before marketing. In accompaniment to this law is another for the control of gins and presses in order to prevent fraudulent malpractices in them.

The Agricultural Department have selected strains of Jute which maintain their superiority over the older varieties used by the cultivators and they are rapidly spreading. Progress has been made in the extraction of fibre from sunn hemp.

The Department has been experimenting in the selection of a tobacco plant which will result in an increase in the output of the better quality of Indian cigars and thus assist home grown tobacco better to hold its own in competition with imported cigars tobacco and cigarettes.

Departmental investigations have meanwhile been conducted in regard to the reclamation of saline lands, the conservation of soil moisture, the movement of nitrates in the soil, the storage of farmyard manure, the efficiency of different methods of green manuring, the solubilisation of mineral phosphates, the control of insect pests and diseases of crops and problems relating to animal nutrition.

Improvements are being attained by the Department in the indigenous milk breeds of cattle by better feeding and selective breeding and by crossing indigenous breeds with the famous milk breeds of Ayrshire and Holstein. Sterilised milk is now being carried over distances up to 1,000 miles and should the experiments being made in this connection prove successful it will open a new vista of possibilities for the dairy industry in India. Much attention is being paid to the question of cattle feeding. For instance extensive trials have been made with different methods of storing silage. Public interest in dairying and cattle breeding appears to be growing throughout India.

The introduction of improved tillage implements from the West has already done much to raise the standard of farming in India and work in this direction is being pressed forward. Thousands of improved implements are now to be seen in the countryside. A great difficulty in the introduction of improved drills, mowing machines, fodder cutters, threshers, winnowing machines, cane mills and so on, suitable to the different needs of various parts of the country is the low purchasing power of the people and the Agricultural Departments in the Provinces have engaged the services of agricultural engineers and adopted other means to encourage and facilitate the desired progress by the invention of

simpler and cheaper implements of the necessary kinds than those imported from overseas.

The past two or three years, however, have seen tremendous strides made in the popularising of modern implements and at the Bombay Presidency Agricultural Show held in Poona in October 1926 (the largest show ever held in Asia) the machinery section alone contained exhibits of farm machinery valued at many lakhs of rupees demonstrating that there is a fast increasing demand for modern implements.

Expansion of Work—It has long been increasingly evident that the agricultural revivalist activities which have thus grown up in the past two decades have reached a stage when their processes need overhauling and reorganisation on broad lines. The achievements of research require better means for their applications and to secure their popular adoption. Agricultural interests have for some years been demanding as much official effort for their improvement as has lately been given by the utilisation of fiscal measures and in other ways for the institution and fostering of Indian industrial ventures. The awakening of popular intelligence during recent years has almost certainly in an important degree prepared the mind of the cultivating classes for a more advanced policy of agricultural improvement than was previously practicable. The Government of India have been aware of the development of this new phase in the situation but post-war financial stringency has prevented their making funds available for its proper development. The financial position has however during the past two years considerably eased and consequently proposals have been formulated for an important expansion of agricultural policy. These were in particular discussed between Lord Reading the then Viceroy of India and the Secretary of State for India during the former's visit to England in 1925. As a result and as anticipated a Royal Commission on Agriculture was appointed on January 4th 1926 with the Marquis of Linlithgow as President and consisting of the following members—

Marquess of Linlithgow

H. Calvert Esq. C.B.E. M.A. I.C.S. Registrar
Co-operative Societies Punjab

Professor N. Ganguli Professor of Agriculture
and Rural Economy Calcutta University

Dr. I. K. Hyder M.A. Professor of Economic
Agriculture University

B. S. Kanet Esq.

Sir R. S. Lawrence K.C.B.

Sir James Mackenzie, K.C.B. I.C.S.

Sir Thomas Middleton K.C.B. I.C.S.

Raja Sri Krishna C. C. N. Deo Raja of
Parlakmedti

Raj Bahadur Sir Ganga Ram Esq. C.B.E. M.V.O.
(Sind Province)

The following are the terms of reference—
General

To examine and report on the present conditions of agriculture and rural economy in British India and to make recommendations for the improvement of agriculture and the promotion of the welfare and prosperity of the rural population.

In particular to investigate—

- (a) the measures now being taken for the promotion of agricultural and veterinary research, experiment, demonstration and education, for the compilation of agricultural statistics, for the introduction of new and better crops and for improvement in agricultural practice, dairy farming and the breeding of stock
- (b) the existing methods of transport and marketing of agricultural produce and stock
- (c) the methods by which agricultural operations are financed and credit afforded to agriculturists
- (d) the main factors affecting rural prosperity and the welfare of the agricultural population to make recommendations.

It will not be within the scope of the Commission's duties to make recommendations regarding the existing system of land ownership and tenancy or of the assessment of land revenue and irrigation charges or the existing division of functions between the Government of India and the local Governments. But the Commission shall be at liberty to suggest means whereby the activities of the Governments in India may best be co-ordinated and to indicate

directions in which the Government of India may usefully supplement the activities of the Governments.

The Commission commenced its sittings on 10th October 1928 and during the latter part of the year heard evidence in the Punjab, Bombay and Madras Presidencies and Bengal. On its return from England in Oct. 1927, it resumed its investigations. It is not anticipated that the report will be available before the middle of 1928.

Another milestone in the history of agriculture in India was the Bombay Presidency Show held at Poona in October 1928 which attracted more than 185,000 people, of whom at least sixty per cent were cultivators. This ambitious scheme of the Bombay Government was made possible by the formation of a fund of 1½ lakhs of rupees and the residue of ₹ lakh has been turned into a Trust Fund to ensure the Show being made an annual one at different centres. The Show was generally pronounced as the largest ever held in Asia, and was visited by representatives from all the provinces and by the Members of the Royal Commission. It is understood that at least two of the other Provinces have decided to hold annual shows on equally as large a scale.

* Issued by the Director of Agriculture, Bengal, the outturn figure includes Nepal.

† Including Indian States.

‡ Rajputana.

Irrigation.

The chief characteristics of the Indian rainfall are its unequal distribution over the country its irregular distribution throughout the seasons and its liability to failure or serious deficiency. The normal annual rainfall varies from 400 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind. The greatest rainfall actually measured at any station in any one year was 905 inches recorded at Cherrapunji in 1881 while at stations in Upper Sind it has been nil. There are thus portions of the country which suffer as much from excessive rainfall as others do from drought.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south east of the peninsula where the heaviest precipitation is received from October 15 to December by far the greater portion of the rainfalls during the south west monsoon, between June and October. During the winter months the rainfall is comparatively small the normal amount varying from half an inch to two inches while the hot weather from March to May or June is practically rainless. Consequently it happens that in one season of the year the greater part of India is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation in another period the same tract becomes a dreary sun-burnt waste. The transition from the latter to the former stage often occurs in a few days. From the agricultural point of view the most unsatisfactory feature of the Indian rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year the greatest recorded being only about seven inches. But if separate tracts are considered extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Scarcity.—Classing a year in which the deficiency is 25 per cent as a dry year and one in which it is 40 per cent as a year of severe drought, the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems of India have been constructed.

Government Works.—The Government irrigation works of India may be divided into two main classes those provided with artificial storage and those dependent throughout the year on the natural supplies of the rivers from which they have their origin. In actual fact practically every irrigation work depends upon storage of one kind or another but in many cases this is provided by nature without man's assistance. In Northern India, upon the Himalayan rivers and in Madras, where the cold weather rains are even heavier than those of the south-west monsoon, the principal non-storage systems are found.

The expedient of storing water in the monsoon for utilization during the subsequent dry weather

has been practised in India from time immemorial. In their simplest form such storage works consist of an earthen embankment constructed across a valley or depression behind which the water collects and those under Government control range from small tanks irrigating only a few acres each to the huge reservoirs recently completed in the Deccan which are capable of storing over 20,000 million cubic feet of water. By gradually escaping water from a work of the latter type a supply can be maintained long after the river on which the reservoir is situated would otherwise be dry and useless.

The Three Classes.—Previously all irrigation works were divided into three classes: Productive, Protective and Minor but during the triennium 1921-24 the method of determining the source from which the funds for the construction of Government works was provided was changed and now all works, whether major or minor for which capital accounts are kept have been re-classified under two heads: Productive and Unproductive with a third class embracing areas irrigated by non-capital works. The main criterion to be satisfied before a work can be classed as productive is that it shall, within ten years of the completion of construction, produce sufficient revenue to cover its working expenses and the interest charges on its capital cost. Most of the largest irrigation systems in India belong to the productive class. The total capital outlay direct and indirect on irrigation and navigation works including works under construction amounted at the end of the year 1925-26 to Rs 99,84 lakhs.

Unproductive works are constructed primarily with a view to the protection of precarious tracts and to guard against the necessity for periodical expenditure on the relief of the population in times of famine. They are financed from the current revenues of India generally from the annual grant for famine relief and insurance and are not directly remunerative. The construction of each such work being separately justified by a comparison of the value of each acre protected (based upon such factors as the probable cost of famine relief, the population of the tract, the area already protected and the minimum area which must be protected in order to tide over a period of severe drought) with the cost of such protection.

Nearly a fifth of the whole area irrigated in India from Government works is effected by minor works for which no capital account is kept.

Growth of Irrigation.—There has during the last fifty years, been a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878-79 the area annually irrigated rose to 19½ million acres at the beginning of the century and to 28 million acres in 1919-20, the record year up to that date. This record was, however, again surpassed in the year 1922-23 when the total area irrigated by all classes of works in India, excluding the Indian States, amounted to 28½ million acres. During the year 1925-26 the total area irrigated by Government works of all classes in British India amounted to some

28.1 million acres which almost approaches the record area of 28½ million acres irrigated in 1922-23 and is nearly a million acres more than in the preceding year. The main increase has been in the class of productive works, which irrigated 4½ million acres in 1878-79 and rose to 19,475,838 acres in 1925-26. The area irrigated by unproductive works at the end of 1925-26 was 2,718,171 acres.

The area irrigated in 1925-26 was largest in the Punjab in which provinces 10,418,000 acres were irrigated during the year. In addition nearly 879,000 acres were irrigated from channels which although drawing their supplies from British canals, lie wholly in the Indian States. The Madras Presidency came next with an area of 7.4 million acres followed by Sind with 3.3 million acres and the United Provinces with nearly 2.8 million.

Capital and Revenue.—The total capital invested in the works has risen from Rs. 42.38 lakhs in 1900-01 to Rs. 90.84 lakhs in 1925-26, an average increase of Rs. 180 lakhs a year. As regards revenue the Government irrigation works of India, taken as a whole yield a return of from 7 to 8 per cent. on the capital invested. In them this is a satisfactory result as Rs. 84.57 lakhs of the total have been spent on unproductive works, which return less than 1 per cent. The capital outlay also includes expenditure on a number of large works under construction which have not yet commenced to earn revenue.

Charges for Water.—The charges for water are levied in different ways in the various provinces. In some notably in Sind, the ordinary land revenue assessment includes also the charge for water. 9/10ths of this assessment being regarded as due to the canals. In others, as in parts of Madras and Bombay different rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also the charge for water. These methods may however be regarded as exceptional. Over the greater part of India water is paid for separately the area actually irrigated is measured and a rate is charged per acre according to the crop grown. Lower rates are often levied in cases where irrigation is by lift, that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have been tried, such as by renting outlets for an

annual sum, or by charging according to the volume of the water used, but these have never been successful. The cultivator fully understands the principle of "No crops no charge" which is now followed as far as possible in canal administration but has no confidence in a system under which his liability for water rate is independent of the area and quality of his crop.

The rates charged vary considerably with the crop grown and are different in each province and often upon the several canals in a single province. Thus in the Punjab they vary from Rs. 7-8-0 to Rs. 12 per acre for sugarcane from Rs. 4 to Rs. 7-8-0 per acre for rice, from Rs. 3-4-0 to Rs. 5-4-0 per acre for wheat, from Rs. 3 to Rs. 4-4-0 per acre for cotton and from Rs. 2 to Rs. 3-4-0 per acre for millets and pulses. No extra charge is made for additional waterings. Practically speaking Government guarantees sufficient water for the crop and gives it as available. If the crop fails to mature or if its yield is much below normal either the whole or part of the irrigation assessment is remitted.

A somewhat different system, the long lease system is in force in parts of Bengal and the Central Provinces under which the cultivators pay a small rate for a term of years whether they take water or not. In these provinces where the normal rainfall is fairly high it is always a question whether irrigation will be necessary at all and if the cultivators have to pay the full rate they are apt to hold off until water becomes absolutely essential and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required, consequently there is no temptation to wait till the last possible moment and the demand is much more evenly distributed throughout the season.

Taken as a whole irrigation is offered on extremely easy terms and the water rates represent only a very small proportion of the extra profit which the cultivator secures owing to the water he receives.

Triennial Comparisons.—The average area irrigated in British India by Government works of all classes during the triennium 1922-23 was nearly 27½ million acres, which is slightly less than in the previous triennium. The areas for each of the three years were 28,50,303 acres in 1922-23, 28,539,390 in the 19-23-4 and 27.2 million in 1924-25. The area irrigated in 19-23 was the highest on record.

The results obtained in each province are given in the table below—

Provinces	Average area irrigated in triennium 1918-21	Average area irrigated in triennium 1922-25
Madras	7,276,257	7,112,061
Bombay (Deccan)	898,575	432,000
Sind	3,040,020	3,000,000
Bengal	1,083,818	88,040
United Provinces	3,501,848	2,800,000
Punjab	9,273,009	10,546,216
Burma	1,451,465	1,993,567
Bihar and Orissa	988,388	880,914
Central Provinces	341,551	435,638
North West Frontier Province	341,809	371,782
Rajputana	20,947	20,643
Baluchistan	24,538	24,297
Total	26,767,800	27,524,297

Productive Works—Taking productive works only a triennial comparison is given in the following table. It will be seen that the average area irrigated by such works during the triennium was over a million acres more than in the previous period.

Provinces	Average area irrigated in previous triennium 1919-21	Average area irrigated in triennium 1921-24
Madras	3 795 814	8,681 945
Bombay Deccan	2 973	2,851
Sind	1 950 811	2 545 065
United Provinces	3 115 207	2 243 989
Punjab	8 480 798	9 714 815
Burma	951 975	1 065 402
Central Provinces	127 374	181 632
North West Frontier Province	204 808	216 814
Total	18 589 760	19 852 514

Taking the productive works as a whole, the capital invested in them was at the end of 1925-26 Rs 64.98 lakhs. The net revenue for the year was Rs 71.2 lakhs giving a return 10.97 per cent as compared with 9 per cent in 1918-19 and 9½ per cent in 1919-20. In considering these figures it must be remembered that the capital invested includes the expenditure upon several works which have only lately come into operation and others which are under

construction which classes at present contribute little or nothing in the way of revenue, moreover only receipts from water rates and a share of the enhanced land revenue due to the introduction of irrigation are credited to the canals, so that the returns include nothing on account of the large addition to the general revenues of the country which follows in the wake of their construction.

Unproductive Works—Turning now to the unproductive works the areas irrigated in the various provinces during the triennium were as below—

Provinces	Average area irrigated in previous triennium 1918-21	Average area irrigated in triennium 1921-24
Madras	281 608	290 654
Bombay Deccan	242 338	268,863
Sind	1 047 293	838 891
Bengal	87 169	79 121
United Provinces	228,418	180,838
Punjab	46 149	66 844
Burma	3 868	6 379
Bihar and Orissa	985 935	958,607

Non-capital Works—The results obtained from the non-capital works are given below —

Provinces	Average area irrigated in previous triennium 1918-21	Average area irrigated in triennium 1921-24
Madras	3 238 835	3 170,388
Bombay Deccan	153 214	1,77,080
Sind	41 941	32 805
Bengal	21,449	21 371
United Provinces	158,223	8 768
Punjab	748,062	684,745
Burma	505,622	559 012
Bihar and Orissa	2 413	1 898
Central Provinces	28,941	47,728
Total	4 898 701	4 712 311

The drop in the area irrigated by non capital works in the United Provinces and Punjab is due to the exclusion of certain works owing to a change having been made in their original classification.

Capital Outlay—The total capital outlay direct and indirect, on irrigation and navigation works including works under construction amounted at the end of 1925-26 to Rs. 99.84

lakhs. The gross revenue for the year was Rs. 11.46 lakhs and the working expenses Rs. 4.06 lakhs the net return on capital was therefore 7.41 per cent. Of the several provinces the return on the capital outlay invested in productive works was highest in the Punjab where the canals yielded 17.2 per cent. In Madras the percentage of return was 12.17 while in the United Provinces a return of 5.39 per cent. was realised.

Irrigated Acreage—A comparison of the acreage of crops matured during 1925-26 by means of Government irrigation systems with the total area under cultivation in the several provinces is given below —

Provinces.	Net area cropped	Area irrigated by Government irrigation works.	Percentage of area irrigated to total cropped area	Capital cost of Government irrigation & Navigation works to end of 1924-25 In lakhs of rupees	Estimated value of crops raised on areas receiving State irrigation In lakhs of rupees

* Exclusive of the value of crops raised on some 3 million acres irrigated by non-capital works

New Works.—Two major works of exceptional importance are now under construction namely the Sukkur Barrage and Canals in Sind and the Sutlej Valley Canals in the Punjab. The Sukkur Barrage, when completed will be the greatest work of its kind in the world, measuring 4,725 feet between the faces of the regulators on either side. The total cost of the scheme is estimated at Rs. 1,836 lakhs of which the barrage accounts for about Rs. 569 lakhs and the canals for Rs. 1,266 lakhs. A gross area of 7½ million acres is commanded, of which 5½ million acres is cultivatable and an annual area of irrigation of 4½ million acres is anticipated, of which 2 million acres represent existing inundation irrigation which will be given an assured supply by the new canals. The ultimate annual net revenue forecasted as obtainable from the project, after paying working expenses is Rs. 194 lakhs, which represents a return of 10½ per cent. on capital. This is the return from water rates alone, but a further large increase in general revenues may safely be reckoned upon from the area of 3 million acres of waste which will be brought under cultivation. There will be increases on this account under practically every head of revenue, such as railways, customs stamps excise and the like not to mention the addition to the country's wealth owing to the production on land at present barren of crops to the value of Rs. 2,500 lakhs per annum.

The Sutlej Valley Works consist of four wells three on the Sutlej and one on the Panjab as the Chenab is called below its junction with the Sutlej with twelve canals taking off from above them. The total area to be irrigated is 5,108,000 acres, or nearly 8,000 square miles. Of this 2,075,000 acres

are perennial and 3,033,000 acres non perennial. Irrigation 1,942,000 acres are in British territory, 2,825,000 acres in Bahawalpur and 341,000 acres in Bikaner.

The total cost of the scheme was estimated at Rs. 1,480 lakhs. Upon this a return of 12½ per cent. is anticipated from water rates alone. But the scheme has another and even more important source of revenue. On the introduction of irrigation no less than 3½ million acres of desert waste, the property of the three parties concerned, at present valueless will become available for colonisation and sale. It is customary in the *pro-forma* accounts of irrigation projects to credit a scheme with the interest on the safe proceeds of Crown waste lands rendered cultivatable by its construction. If this is included, the annual return on the works will amount to nearly 34 per cent. It bids fair indeed, to rival the Lower Chenab Canal the return from which during the past seven years has averaged over 41 per cent.

The Canvey Reservoir project, which will cost over 6 crores of rupees and will extend irrigation to a new area of 801,000 acres, was sanctioned by the Secretary of State in 1925. In Bombay Presidency the Bhandara Dam 270 feet in height was completed at the end of 1925 and the Bhatgar Dam at the end of 1926. The Damodar River (Canal) project was sanctioned in 1921, but has been re-cast in view of the rise in the price of labour. Excellent progress has been made with the Sardar Udh canal in the United Provinces. A comprehensive irrigation programme extending over a period of 14 years has been commenced in the Central Provinces.

WELLS AND TANKS

So far we have dealt only with the great irrigation schemes. They are essentially exotic the products of British rule the real eastern instrument is the well. The most recent figures give thirty per cent. of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth he is more careful in the use of it. Well water exerts at least three times as much duty as canal water. Again owing to the cost of lifting it is generally used for high grade crops. It is estimated that well-irrigated lands produce at least one-third more than canal watered lands. Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems it must be remembered that the spread of canals increases the possibilities of well irrigation by adding through seepage to the store of subsoil water and raising the level.

Varieties of Wells.—Wells in India are of every description. They may be just holes in the ground sunk to subsoil level, used to a year or two and then allowed to fall into decay. These are temporary or *kacha* wells. Or they may be lined with timber or with brick or stone. They vary from the *kacha* well costing a few rupees to the masonry well, which will run into thousands, or in the sandy wastes of Bikaner,

where the water level is three hundred feet below the surface to still more. The means of raising the water vary in equal degree. There is the *puotiah* or weighted lever raising a bucket at the end of a pivoted pole just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the *mot* or leather bag, which is passed over a pulley overhanging the well then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the *mot* is just a leather bag more often it is a self acting arrangement which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity and the ease with which the apparatus can be constructed and repaired by village labour the *mot* is unsurpassed in efficiency. There is also the Persian wheel, an endless chain of earthenware pots running round a wheel. Recently attempts have been made particularly in Madras to substitute mechanical power furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large especially where two or three wells can be linked. Government have systematically encouraged well irrigation by advancing funds for the purpose and exempting well watered lands

from extra assessment due to improvement. These advances termed *takari*, are freely made to approved applicants, the general rate of interest being 6½ per cent. In Madras and Bombay ryots who construct wells or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well, the indigenous instrument of irrigation is the tank. The village or the roadside tank is one of the most conspicuous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakshmi Fife and Whiting in the Bombay Presidency or the Peritar Lake in Travancore holding up from four to seven billion cubic feet of water and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civilisation. Some of these works in Madras are of great size, holding from three to four billion cubic feet, with water spreads of nine miles. The inscriptions of two large tanks in the Chingleput district of Madras which still irrigate from two to four thousand acres are said

to be over 1 100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces including Burma and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zamindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useless inasmuch as the rainfall does not suffice to fill them and they remain dry throughout the season.

Bibliography.—Triennial Review of Irrigation in India 1905-1927. Calcutta, Superintendent of Government Printing. Price One Rupee. The annual irrigation reports in India used to be as arid as the Sahara, consisting of a dull statistical record. They have been greatly improved of recent years and have now assumed a quite satisfactory form. The major review appears once every three years. The first of these triennial reviews was issued in 1922. Between the triennial reviews there is issued a briefer statement recording the progress of each particular year.

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions while when the Northern Hemisphere is turned towards the sun Southern Asia becomes a super heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons.—The all important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence dry fine weather clear skies low humidity and little air movement are the characteristic features of this season. The summer rains come in the provinces of the North West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the middle of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the

year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are—Westerly winds of the temperate zone over the extreme north of India to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which as the season progresses finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, one the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coincide with the damp winds of the retreating summer monsoon, which curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September i.e., the summer monsoon, at the Madras Observatory amounts to 15.38 inches the total rainfall for the three months October to December amounts to 29.48 inches. The other region in which the weather is unsettled during this period of generally settled conditions, is North-west India. This region during January February and part of March is traversed by a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year and in some years no storms at all are recorded. In normal years however in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months,

December to March amounts to 5.26 inches while the total fall for the four months, June to September, is 4.78 inches, showing that the rainfall of the winter is absolutely greater in this region than that of the summer monsoon. These two periods of subsidiary rains are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100°, occur in the Deccan. In April the area of maximum temperature, between 100° and 105° lies over the south of the Central Provinces and Gujarat. In May maximum temperatures varying between 105° and 110° prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures exceeding 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana, the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 125° registered at Jacobabad on June 12th, 1897. During this period of rising temperature and diminishing barometric pressure great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive.

By the time the area of greatest heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole character of the weather changes. During the hot weather period, discussed above the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° south the wind circulation is that of the south-east trades, that is to say from about Lat. 30° 35° south a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropic or beyond. To the north of this circulation, i.e., between the Equator and Lat. 20° to 25° North, there exists a light unsteady circula-

tion the remains of the north-east trades, that is to say about Lat. 20° North there is a north east wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northern progress. At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up the immense circulation of the south east Trades, with its cool moisture laden winds rushes forward becomes linked on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions—the south west monsoon proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land area from Lat. 30° S to Lat. 30° N the southern half being the south-east trades and the northern half the south west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the Indian seas and flows over the Indian land it is highly charged with aqueous vapours.

The current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over India from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma, East Bengal and Assam while another portion curves so south at the head of the Bay and over Bengal and then meeting with the barrier of the Himalayas curves still further and blows as a south-easterly and easterly wind right up the Gangetic plain. The south-west monsoon continues for three and a half to four

months, viz. from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range the total averaging about 100 inches most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujrat Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana and passing onward gives moderate to heavy rain in the Eastern Punjab Eastern Rajputana and the North-west Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The monsoon current over the southern half of the Bay of Bengal blows from south west and is thus directed towards the Tenasserim hills and up the valley of the Irrawaddy to which it gives very heavy to heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then deflected westward by the barrier of the Himalayas and gives general rain over the Gangetic plain and almost daily rain over the lower ranges of the Himalayas from Sikhim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably be light but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras, it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper

Burma, it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India is —

May	2 6 inches.
June	8 3
July	11 9
August	10 5
September	7 2
October	8 2

Cyclonic storms and cyclones are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, viz. May and November but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1877 to 1901 and shows the monthly distribution —

	Jan	Feb	Mar	Apr.	May	June
Bay of Bengal			1	4	18	28
	July	Aug	Sep.	Oct	Nov	Dec
Bay of Bengal	41	36	45	34	22	8
	Jan	Feb	Mar	Apr.	May	June
Arabian Sea					2	15
	July	Aug.	Sep	Oct	Nov	Dec
Arabian Sea	2		1	1	5	

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year but it must be remembered that every year produces variations from the normal and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are —

- (1) Delay in the commencement of the rains over a large part of the country this being most frequent in North Bombay and North west India.
- (2) A prolonged break in July or August or both
- (3) Early termination of the rains, which may occur in any part of the country
- (4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north west of India. This area of fine weather and dry winds extends eastward and southward, the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region; fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

MONSOON OF 1927

The S W Monsoon of the year was not normally vigorous but though feeble in its initial onset, its progress on the whole over the country improved as the season advanced and finally approximated near enough to normal conditions. The distribution however was seriously affected by several storms which, as usual rising off the Bay drew marked concentration of rainfall over certain regions along the tracks of these storms flooding the country (Guzrat, Sind and Rajputana). West thus returned heavy excesses respectively of 46, 40 and 29 per cent over the normals of the season at the expense of precipitation over other portions of the Continent. The Current on the Arabian Sea side was established on the Malabar coast practically about its normal time—27th May—and advancing northwards somewhat tardily confined its activity only to the southern half of the Peninsula for over a week. It reached the Konkan coast on the 15th June and the Bombay coast on the 14th, about a week later than the normal date, and thereafter advanced well in time to Guzrat and into the Deccan and the Central Provinces. Though the pulses continued fairly active over the Peninsula during the rest of the month they were too feeble to penetrate further northwards into Sind and Rajputana and North-west and Central India.

The Bay branch of the current was established and was fairly pronounced in the South and Centre of the Bay about the last week in May and under the stimulus of a small depression it extended well up into Chota Nagpur and Bihar early in June. And further strengthened about the middle of the month by a storm rising off the Orissa coast the current was well helped in its advance past the Central Province into West United Provinces giving fairly widespread rains over the central parts of the Continent. On the whole however indications of the feebleness of this branch also during the month were fully apparent over the whole of its field of activity except in Assam. Thus the total rainfall in June averaged over the plains of India was in defect by 16 per cent. Hyderabad, Central Provinces and Assam however returned fairly large excesses while marked defects were noted all over the tract of the country extending from Bihar and Orissa to the North-West Frontier with the exception of Guzrat.

Conditions in July improved but mainly under the influence of cyclonic circulation. A small depression off the Konkan coast followed by another over west Punjab helped the extension of the Arabian Sea current well into Sind, Rajputana and Punjab, and the rise of other

storms in the Bay, later sustained the activity of the branch during the month. The Bay current likewise struggling feebly to advance along the Gangetic plains into the Punjab was strengthened during the month by no less than three storms rising off the Orissa coast, which following the usual north westerly course determined heavy downpour all along their tracks. The storm of the 2nd July, especially which intensified on its passage as it approached Guzrat, concentrated heavy downpour of rain causing disastrous floods in Guzrat and Kathiawar. While yet a fourth storm off the Bay about the end of the month moving inland and disappearing after a short run over Bihar caused heavy floods in parts of Bihar and Orissa. The rainfall averaged over the plains of India thus gathered for July was in excess by 1 per cent.

During August both branches continued weak their activity being influenced in the main by three Bay disturbances which concentrating the rains on tracks along their courses contributed to the large excesses returned by Rajputana, Central India and United Provinces. West Averaged over the plains of India the month's contribution however remained in defect by 7 per cent.

The severe weakness of the monsoon current of the year was evidenced by its retreat from North-west India early in September. In the Peninsula the retreat was for the time retarded by yet another depression which rising off the Bay and traversing now in the westerly direction crossed the Deccan and merging itself into a low pressure area off the Konkan coast invigorated the Arabian Sea pulses which once again extended the rains into Guzrat and Rajputana. The activity of the Bay current was to the main confined during the month to Upper Burma, Assam, and Bengal influencing to a certain extent Bihar and Orissa also. The total fall for September was 12 per cent in defect though Malabar, Assam and Bengal returned fairly large excesses.

During the month of October the activity of the Bay current was restricted to Burma and Assam in the main. A depression off the Orissa-Ganjam coast early in the month helped to extend the pulses over North-east India. The appearance of the North East Monsoon current about the 20th October confined at first to the extreme south of the Peninsula, determined the final recession of the S W Monsoon of 1927. The total fall for October was 7 per cent in excess. The total fall averaged over the whole of India for the season June to September was 4 per cent in defect.

The following table gives detailed information of the rainfall of the period June to September —

DIVISION	RAINFALL JUNE TO SEPTEMBER			
	Actual	Normal	Departure from Normal	Percentage departure from Normal
	Inches	Inches	Inches	
Punjab	72.9	89.8	— 11.0	— 13
Assam	79.3	61.1	— 18.2	— 30
Bengal	54.0	60.9	— 3.9	— 6
Bihar and Orissa	40.1	45.5	— 5.4	— 12

Mysore	12.0	15.5	— 2.6	— 17
Madras	28.9	26.3	— 2.6	— 10
Mean of India	35.1	39.7	— 1.6	— 4

To the student of Indian administration nothing is more remarkable than the manner in which great problems arise produce a corresponding outburst of official activity to meet them and then fall into the background. This general truth is illustrated by a study of the history of famine in India. For nearly forty years it was the bogey of the Indian administrator. The forecasts of the rains were studied with acute anxiety. The actual progress of the rains was followed with no less anxiety and at the first signs of a bad or poor season the famine relief machinery was furnished up and prepared for any emergency. The reason for this is clear if we examine for a brief space the economic condition of the Indian peasantry. Nearly three quarters of the people are directly dependent on agriculture for their daily bread. Very much of this agriculture is dependent on the seasonal rains for its existence. Immense areas in the Bombay Presidency, Madras, the United Provinces and Central India are in a region of erratic and uncertain rainfall. The rainy season is short and if for any natural reason there is a weakness or absence of the rain-bearing currents then there is either a poor harvest or no harvest at all. In Western lands everyone is acquainted with the difference between a good and a poor season but western countries offer no parallel to India, where in an exceptionally bad year wide tracts of thickly populated land may not produce even a blade of grass. In the old days there were no rail ways to distribute the surplus of one part of India to the districts where the crop had failed. There were often no roads. The irrigation works were few and were themselves generally dependent on the rainfall for their reserves. The people lived from hand to mouth and had no store of food to fall back upon. Nor had they any credit. In the old days then they died. Commencing with the Orissa famine in 1865-67 the Government of India assumed responsibility for the saving of human life in such crises. After the famine of 1899-1900 this responsibility was also shouldered by the Indian States. Stage by stage this responsibility was expressed in the evolution of a remarkable system of famine relief covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is rusting in the official armouries because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall. At the same time the scientific study of the problems of Indian agriculture has raised the capacity of even the "dry" zones. The peasantry has accumulated a certain reserve against the rainless days from the prosperity which accompanied the period of high prices. The rapid spread of the co-operative credit movement has mobilised and strengthened rural credit. The spread of manufacturing enterprise has lightened the pressure on the soil. The relation of famine to the question of Indian administration has therefore changed. In an exceptionally bad year it may create administrative difficulties but the Arab has ceased to be an administrative Rajputana and obliem.

Famine under Native Rule.

Famines were frequent under Native rule and frightful when they came. In 1830 says Sir William Hunter in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants. In 1631 a Dutch merchant reported that only eleven of the 380 families at Svally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died there being none to bury them. In Surat that great and crowded city he could hardly see any living persons but the corpses at the corner of the streets. He twenty together, nobody burying them. Thirty thousand had perished in the town alone. Festivities followed famine. Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. It has come to be seen that whilst railways have checked the old fashioned practice of storing grain in the villages they have made the reserves where they exist available for the whole of India. In India there is now no such thing as a food famine: the country always produces enough food for the whole of the population famine when it comes is a money famine and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines.

The Orissa famine of 1865-67 may be taken as the starting point because that induced to first great and organised effort to combat distress through State agency. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was a little slow in appreciating the need for action but late food was poured into the district in prodigious quantities. Thirty five million units were relieved, a unit is one person supported for one day at a cost 95 lakhs. The mortality was very heavy and it is estimated that a million people or one third of the population died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced India to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900. It is estimated that out of a total population of a million, and a half in Marwar one million emigrated. There was famine in Behar in 1873-74 then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and acted by the desire to secure economy the Government relief programme was not entirely successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved at a cost of Rs. 84 crores. Charitable contributions from Great Britain and the Colonies aggregated Rs. 64 lakhs.

The Famine Codes.

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey elaborated the Famine Codes which amended to meet later experience form the basis of the famine relief system to-day. They recommended (1) that employment should be given on the relief works to the able-bodied at a wage sufficient for support, on the condition of performing a suitable task, and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land owning classes should be assisted by loans and by general suspensions of revenue in proportion to the crop failure. In sending a Famine Code to the provincial governments the Government of India laid down as the cardinal feature of their policy that the famine wage "is the lowest amount sufficient to maintain health under given circumstances. Whilst the duty of Government is to save life it is not bound to maintain the labouring population at its normal level of comfort." Provincial codes were drawn up and were tested by the famine of 1898-97. In that 307,000 square miles were affected with a population of 69,500,000 the numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs. 74 crores revenue was remitted to the extent of Rs. 1½ crore and loans given aggregating Rs. 1½ crore. The charitable relief amounted to about Rs. 1½ crore of which Rs. 1 crore was subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines comparable with it in severity and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission or the people to recover from the shock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900

This famine affected 75,600 square miles with a population of 59,600,000. In the Central Provinces Berar, Bombay, Ajmer and the Hissar district of the Punjab famine was acute. It was intense in Rajputana, Baroda, Central India, Hyderabad and Kathiawar. It was marked by several distinctive features. The rainfall over the whole of India was in extreme defect being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine with a terrible mortality amongst the cattle. The water supply was deficient, and brought a crop of difficulties in its train. These districts like Gujarat where famine had been unknown for so many years that the locality was thought to be famine immune, were affected the people here being softened by prosperity along to their villages in the hope of saving their cattle and came within the

scope of the relief works when it was too late to save life. A very large area in the Indian States was affected and the Marwaris swept from their impoverished land right through Central India like a horde of locusts leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State. Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs. 8½ crores, the Indian States did a great deal to bring their administration into line with that in British India, although actual deaths from starvation were insignificant, the extensive outbreaks of cholera and the devastating epidemic of malaria which followed the advent of the rains induced a famine mortality of approximately a million. The experiences of this famine were collated by the Commission presided over by Sir Antony MacDonnell. This Commission reported that taking the famine period as a whole the relief given was excessive and laid down certain modified lines. The cardinal feature of their policy was moral strategy. Pointing out that if the people were assisted at the start they would help themselves whilst if their condition were allowed to deteriorate it proceeded on a declining scale, they placed in the forefront of their programme the necessity of putting heart into the people. The machinery suggested for this purpose was the prompt and liberal distribution of advance loans, the early suspension of revenue and a policy of prudent boldness starting from the preparation of a large and expansive plan of relief and secured by liberal preparations, constant vigilance and a full enlistment of non-official help. The wage scale was revised, the minimum wage was abolished in the case of able-bodied workers, payments by results were recommended and proposals were made for saving cattle.

The Government of India is now in possession of complete machinery to combat the effects of drought. In ordinary times Government is kept informed of the meteorological conditions and the state of the crops. Programmes of suitable relief works are kept up to date the country is mapped into relief circles, reserves of tools and plant are stocked. If the rains fail, policy is at once declared, non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Relief works are then opened and if labour in considerable quantities is attracted they are converted into relief works on Code principles. Poor houses are opened and gratuitous relief given to the infirm. On the advent of the rains the people are moved from the large works to small works near their villages. Liberal advances are made to agriculturists for the purchase of plough, cattle and seed. When the principal autumn crop is ripe the few remaining works are gradually closed and gratuitous relief ceases. All this time the medical staff is kept in readiness to deal with cholera.

which so often accompanies famine, and malaria, which generally supervenes when the rains break.

Famine Protection

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Famine Commission of 1880 stated that the best and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective. Productive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans. Protective works, which do not pay directly from revenue. In order to guarantee that there should be continuous progress with protective works, the Famine Insurance Grant was instituted in 1875. It was decided to set apart from the general revenue Rs. 11 crores annually or one million sterling. The first charge on this grant is famine relief, the second protective works, the third the avoidance of debt. The chain of protective railways is now practically complete. Great progress is being made with protective irrigation. Acting on the advice of the Irrigation Commission an elaborate programme of protective irrigation works has been constructed particularly in the Bombay Deccan—the most famine-susceptible district in India—and in the Central Provinces.

The Outlook

Such in brief is the official programme and organisation which has been built up out of the experience and practice of the past. Yet everything goes to show that Government activity to save human life will never be wanted in the future on the colossal scale of former times even so recently as 1899-1900. Each succeeding failure of the rains indicates that there has been in silent progress an economic revolution in India. In the year 1918 the rains failed more seriously and over a wider area than during any monsoon in the recent history of India. The deficiency in the rainfall was more marked than in the great famine of 1899. Yet such was the increased resisting power of the people that instead of a demand for State relief from over five millions, the maximum number at any time in receipt of public assistance was never so large as six hundred thousand. The shock to the social life of the community was insignificant, the effects of the drought completely disappeared with the good rains of the following year.

Increased Resisting Power

The causes of this economic change in the conditions of India, whose influence is widespread are many. We can only briefly indicate them here. There is a much greater mobility in Indian labour. Formerly when the rains failed the ryot clung to his village until State relief in one form or another was brought almost to his doors. Now at the first sign of the failure of the rains he girds up his loins and goes in search of employment in one of the industrial centres, where the supply of labour is rarely equal to the demand, or on the constructional works which are always in progress either through State or private agency in the country. Then the ryot

generally commands some store of value often mislabeled a hoard. The balance of exports in favour of India in normal times is approximately £50 millions a year. The gold and silver bullion in which this is largely liquidated is distributed all over the country. In small sums or in ornaments which can be drawn upon in an emergency. The prodigious coining of rupees during the last two years of the war and the continuous absorption of gold by India, represent small diffused savings which take this form owing to the absence of banking institutions and lack of confidence in the banking system. There has been a large extension of irrigation. More than one-third of the land in the Punjab is now under irrigation and in other Provinces particularly in the famine-susceptible tracts of the Bombay Deccan, irrigation works have been constructed which break the shock of a failure of the rains. Then the natural growth of the population has been reduced by plague and famine diseases followed by the great influenza pandemic of 1918-19 which swept off five millions of people. This has not only prevented the increase of congestion, but has brought some areas particularly in the Indian States below their former population-supporting capacity. The increase of railways distributes the resources of the country with ease, the spread of the co-operative credit movement has improved rural credit. Finally there is the considerable development of manufacturing industry which is generally short of labour and helps to absorb the surplus of a famine year. Whilst the Government is completely equipped with a famine code there is no reason to suppose that there will ever recur such an emergency as that of 1899. Famine can now be efficiently met by the liberal distribution of tagavi, the suspension and remission of the land revenue demand, the relief of the aged and others who cannot work, the provision of cheap fodder for the cattle with possibly some assistance in transporting the affected population of the famine-affected tract to the industrial centres.

The increased resisting power of the people was effectively demonstrated during the famine of 1900-21 which was due to the failure of the monsoon towards the end of the year 1900. The distress which appeared in the end of 1900 praisted during the early months of 1901 and regular famine was declared in parts of Madras, Bombay, Central Provinces and Baluchistan. Local distress prevailed also in Bengal, Punjab and Central India. The largest number of persons on relief of all kinds did not exceed 0.40 million which was considerably less than 3% of the total population of the area affected by the failure of the monsoon.

The Indian Famine Trust.

Outside the Government programme there is always scope for private philanthropy especially in the provision of clothes, help for the superior class poor who cannot accept Government aid and in assisting in the rehabilitation of the cultivators when the rains break. At every great famine large sums have been subscribed, particularly in the United Kingdom, for this purpose and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine

Famine Trust

355

The following statement shows the income and expenditure of the Trust during the past six or seven years —

Year	Income	EXPENDITURE							Total expenditure
		Madras	Tanjor	Bombay	Ameri Mirwar	Bihar and Odisha	United Provinces	Bengal	
1911	Rs 1,17,682								Rs
1912	1,43,97			1,48,000					1,38,000
1913	(a) 1,43,97			23,500					23,500
1914	1,21,65						1,00,000		1,00,000
1915	1,22,600						(c) — 38,593		(c) — 38,593

1921	1,20,221						0,000		1,00,000
1922	1,10,825	25,000							25,000
1923	1,22,905	(c) — 2,513							(c) — 2,503
1924	1,32,518	1,50,000	1,00,000						1,93,000
1925	1,21,250	(c) — 179		20,000					20,521
1926	1,28,600			3,00,000	11,000	1,00,000			11,000
1927	1,28,03			(c) — 1,857					1,98,163
		2,02,14	45,000	7,87,666	11,000	1,00,000	3,86,622	1,50,000	15,57,413

(a) Includes a bequest of Rs 20,310

(b) Includes Rs 4,943 refunded from the grant made in 1900 for the maintenance of Rajputana Orphanage

(c) Represents refunds from grants made in previous years

Sir Frederic Gaundett, K.C.B., C.I.E., C.M.S. Auditor-General with the Government of India has been Secretary and Treasurer of the Trust since 1912

land, the Maharaja of Jaipur gave in 1900 a sum of Rs 15 lakhs, in Government securities to be held in trust for the purposes of charitable relief in seasons of general distress. This Trust has now swollen to over Rs. 36 lakhs.

This Trust in a few years became swollen to Rs. 28 10 000 and has ever since been maintained at that figure. The money is invested and the principal never taken for expenditure. The income from it is utilised for relief work as necessary and unexpended balances are temporarily invested so as to make available in years of trouble savings when expenditure is not necessary. The temporary investments—in Government Securities—at the end of 1927 stood at Rs. 6 14 800 and the cash balance at the same time was Rs. 21 323-10-11 so that the total available for expenditure at the commencement of this year was Rs. 6 34 923-10-11.

The whole conditions to meet which the Trust was founded have changed in recent years. This is the result of the improved policy of Government in regard to famine relief and of the difference in the meaning of the word famine in the consequence of the improvement of transport communications and other factors affected by modern progress. An area stricken by failure of seasonal rains now obtains supplies from other

regions in a manner impossible before the development of railways and of modern marketing practice and Government help its people by loans given direct or through Co-operative Societies to tide them over the period of scarcity. The experience of successive visitations of scarcity in different parts of the country also proves that the general economic progress of the people makes them able to meet temporary periods of stress in a manner formerly unimaginable. Famine in the old terrible sense of the term has in fact ceased to occur. This was well illustrated by the events of 1912 when the land suffered from a failure of the rains more general throughout India and worse in degree than any previously recorded by the Meteorological Department but the crisis was born with a minimum of suffering. The demands upon the Famine Trust have consequently so greatly diminished in their original sense that hardly any money is now distributed from it for the relief of famine. In the proper sense of the word resulting from rain failure and expenditure has mainly become grants of assistance to sufferers from floods. The total expenditure upon relief of famine in the old sense has been less than Rs. 2½ lakhs since 1919. The terms of the Trust for fortunately permit of management on lines according with modern needs.

BOY SCOUTS

The Boy Scouts movement initiated in England by Lt Gen. Sir Robert Baden Powell (the Chief Scout) has spread widely in India, both among Europeans and Indians. The Viceroy is Chief Scout of India and the heads of Provinces are Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves.

It is confidently anticipated that in the Boy Scout Movement will be found a natural means of bridging the gulf between the different races existing in India. The movement is non-official, non-military, non-political and non-sectarian. Its attitude towards religion is to encourage every boy to follow the faith he professes. Every boy admitted as a Scout makes a threefold promise to do his best: (1) to be loyal to God and the King; (2) to help others at all times; and (3) to obey the Scout law. The law referred to lays down—

1. That a Scout's honour is to be trusted.
2. That he is loyal to God and the King, his parents, teachers, employers, his comrades, his country and those under him.
3. That he is to be useful and to help others.
4. That he is a friend to all and a brother to every other Scout, no matter to what social class the other belongs.
5. That he is courteous.
6. That he is a friend to animals.
7. That he obeys orders.
8. That he smiles and whistles under all difficulties.
9. That he is thrifty.
10. That he is clean in thought, word and deed.

INDIAN HEAD QUARTERS

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have already been made. India not only specialises itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war the enthusiasm for industrial development which has seized nearly all classes of educated Indians and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process for which sound foundations had been laid before the war is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel coal or oil. These commodities are all difficult to obtain and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Cocha Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer on the other hand, immense possibilities both as regards the quantity available and the cheapness at which the power can be rendered in all parts of India.

Water power schemes pure and simple are generally difficult in India because the power needs to be continuous while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in India. Water therefore must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further hydro-electric schemes can frequently be associated with important irrigation projects, the water being first used to drive the turbines at the generating stations and then distributed over the fields.

The Industrial Commission emphasized the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E. then Chief Engineer, Irrigation Branch, United Provinces to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E. Electrical Adviser to the Government of India. Mr. Barlow died but Mr. Meares issued a preliminary report in September 1919, summarising the present state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr. Meares showed that industries in India now absorb over a million horse power of which only some 285,000 h.p. is supplied by electricity from steam oil or water. The water power so far actually in sight amounts to 1½ million horse-power but this excludes practically all the great rivers, which are at present uninvestigated. Thus the minimum flow of

the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse power for every thousand feet of fall from the Himalayas while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse power in the Irrawaddy and Chindwin rivers given in the report of the London Conjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavla, the Andhra Valley, the Nila Mula and the Koyna Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro Electric Works

The greatest water power undertakings in India—and in some respects the greatest in the world—are the Tata hydro electric schemes recently brought to fruition and constantly undergoing expansion for the supply of power in the city of Bombay. Bombay is after London the most populous city in the British Empire and it is the largest manufacturing town in Asia. Its cotton mills and other factories use over 100,000 horse power of mechanical energy and until a year or two ago this was almost entirely provided by steam generated by coal coming from a distance—mostly Bengal. The Tata Hydro Electric Power Scheme now an accomplished fact marked one of the big steps forward made by India in the history of its industrial development. It was the product of the fertile brain of Mr. David Gostling one of the well known characters of Bombay nearly a generation ago. The exceptional position of the Western Ghats which rise 2,000 feet from sea level which a very short distance of the Arabian Sea and force the monsoon as it sweeps to land to break into torrential rain at the mountain passes was taken full advantage of and the table lands behind the Ghats form a magnificent catchment area to conserve this heavy rainfall. In Mr. Gostling pressed the scheme on the attention of Mr. Jamsetji Tata for years and with persistence collected data which he laid before that pioneer of the larger industries in India. He summoned the aid of experts from England to investigate the plan. The scheme was fully considered for six long years. Meanwhile both Mr. J. N. Tata and Mr. David Gostling passed away but the sons of the former continued the work of their father and on Mr. Gostling's death, Mr. R. B. Joyner's aid was sought to work out the hydraulic side of the undertaking.

The scheme completed a syndicate secured the license from Government and an endeavour was made to enlist the support of financiers of England who tried to impose terms which were not acceptable. Meanwhile the attention of Sir George Clarke (now Lord Sydenham) then Governor of Bombay and an engineer of distinction himself was drawn to the scheme. The interest shown by him drew the attention of Indian Chiefs in the Presidency of Bombay

and outside it to its possibilities funds flowed in and a company with an initial capital of 1,75,00,000 Rupees was started.

The hydro-electric engineering works in connection with the project are situated at and about Lonavla above the Bhor Ghat. The rainfall is stored in three lakes at Lonavla, Waihan and Shiravta whence it is conveyed in masonry canals to the forebay or receiving reservoir. The power house is at Khopoli at the foot of the ghats whither the stored water is conveyed through pipes the fall being one of 1,725 feet. In falling from this height the water develops a pressure of 750 lbs per square inch and with this force drives the turbines or water wheels. The scheme was originally restricted to 30,000 electrical horse power but the Company in view of the increasing demand for power from the Bombay mills decided to extend the works by building the Shiravta Dam and issued further shares bringing the capital to Rs. 8,00,00,000 the capacity of the scheme being increased to more than 40,000 electrical horse power. Issued Capital 7 per cent Preference 8,785 shares fully paid and Ordinary 18,400 out of which 10,000 are fully paid and 8,000 new shares on which Rs. 400 have been called up. There is also a Debiture Loan of Rs. 85 lakhs. The works were formally opened by H. E. the Governor of Bombay on the 26th February 1915. At present there are about 44 mills with motors of the aggregate B. H. P. of 55,000 H. P. in service. In addition to the cotton and flour mills which have contracted to take supply from the Company for a period of ten years an agreement has been completed whereby the Tata Hydro Electric Company and the Andhra Valley Power Supply Company and the Tata Lower Company between them supply the whole of the electric power required by the Bombay Electric Supply and Tramways Company Limited and also the power for the electrification of the Harbour Branch and Bombay Kalyan section of the G. I. P. Railway. There remain many prospective buyers of electrical energy and the completion of the Company's full scheme will not suffice for all such demands. Besides the Bombay cotton mills which alone would require about 100,000 horse power there are for instance tramways with possibilities of suburban extensions. The probable future demand is roughly estimated at about 160,000 H. P. Recently the Company has embarked upon a considerable scheme of extensions these involving the impounding of a fourth lake at Kundley near Lonavla the duplication of the pipeline and the installation of additional machinery at the power house at Khopoli.

Investigations undertaken by Mr. H. P. Gibbs with a view to further developing the electrical supply led to the discovery of a highly promising water storage site in the valley of the Andhra River situated near the present lakes previously overlooked as altogether different treatment and design were required. In this instance the draw off point is 11 miles upstream from the dam and at a level 112 ft. above the lowest river bed level at the dam. The water is taken through a tunnel 8,700 ft. long driven in solid trap rock through the scarp of the ghats of which this pressure pipes are an extension. Seventy feet of the

upper water in the lake can be drawn off comprising 75 per cent of the total amount of water stored both above and below draw off level. A scheme was prepared to be carried out by a separate company and providing for holding up the Andhra River by a Dam, about a third of a mile long and 192 feet high at Juvarewadi. This dam holds up a lake nearly twelve miles long the further end of which approaches the brink of the Ghats at Khand. Here a tunnel a mile and a quarter long carries the water to the surge chamber whence it enters the pipes for a vertical drop of about 1,700 feet to the generating station at Bhilpuri about 17 miles from the generating station at Khopoli. The scheme is designed to yield 100,000 horse power in its full development. A new company to operate the scheme was formed on the 31st August 1914 with an initial capital of Rs. 2,10,00,000 divided into 160,000 Ordinary shares of Rs. 1,000 each and 5,000 Preference shares of Rs. 1,000 each, this being the Andhra Valley Power Supply Company Limited. This Company will pay annually to the Tata Hydro Electric Power Supply Company 15 per cent upon the profits (after making certain deductions) or a sum of Rs. 50,000 whichever shall be the larger sum the intention being that the new company shall pay annually to the Tata Hydro Electric Power Supply Company a minimum sum of Rs. 50,000. Power is being supplied to some thirty factories in Bombay absorbing roughly 40,000 electrical horse power as well as to the Bombay Electric Supply and Tramways Company and to the C. I. L. Railway for the first stage of their electrification scheme.

Just as the Andhra project has been developed as a northward extension of the original scheme so a southward development also originated by Mr. Gibbs and developable on lines similar to those of the Andhra project is now practically completed under the name of the Nila Mula scheme, the name arising from the fact that the valleys of the Nila and Mula rivers are being dammed for the conservation of water for it. A company entitled The Tata Power Co. Ltd. was floated in the autumn of 1919 for the purpose having a capital of Rs. 9 crores divided into 30,000 7½ cumulative preference shares of Rs. 1,000 each and 60,000 shares of Rs. 1,000 each, the first and present issue being of 10,000 preference shares and 35,000 ordinary shares. A lake having an area of sixteen square miles and a catchment area of 112 square miles has been formed at Mulshi by the erection of a masonry dam 410 feet in length and 138 feet in height. At the end of the lake opposite to the site of the dam a tunnel has been cut through the Western Ghats to a total length of 14,000 feet at the further end of which the water enters the pipeline and descends to the turbine power house at Bhira 1,000 feet below. The head of water is sufficient to generate 150,000 electrical horse power at 11,000 volts and after being raised up to 170,000 volts the current is transmitted to the receiving station at Dharavi Bombay through an overhead line approximately 80 miles in length. Five generating units each of 80,000 electrical horse power are being erected, and of these two are already in commercial operation. The power will be absorbed by mills, factories and local area not

yet electrified in Bombay and suburbs as well as by the B. E. & C. I. Railway's suburban service the G. I. P. Railway's electrified service within thirty miles of Bombay and the evergrowing needs of the B. E. & C. I. Company.

Nearly 100 miles southward of this Meers Tata propose to erect two dams in the huge valley of the Koyna river proposed by Mr. A. T. Arnall and developable on lines similar to the two projects by Mr. Gibbs above mentioned partly to supply power to Bombay and partly to develop a great assembly of electro-chemical industries near the power installation. The preliminary investigations for this scheme are still proceeding. The catchment area for the lake will be 846 square miles and there will be a total storage after the rains of 112 600 million cubic feet which will be sufficient to supply a normal load of 350 000 horse power for 4 000 hours per year. The preliminary estimates provided for a capital of Rs 810 lakhs to carry out the scheme.

Mysore Installation

The first hydro-electric scheme undertaken in India or indeed in the East was that on the River Cauvery in Mysore State which was inaugurated, with generating works at Sivasa mudram, in 1902. The Cauvery rises in the British district of Coorg and flows right across Mysore. The first object with which the installation was undertaken was the supply of power to the goldfields at Kolar. These are 92 miles distant from Sivasa mudram and for a long time this was the longest electrical power transmission line in the world. Current is also sent to Bangalore 59 miles away where it is used for both industrial and lighting purposes.

The initial undertaking has constantly been expanded since its inauguration so that its total capacity which was at first 6 000 horse power is now approximately 25 000 h.p. This is the maximum obtainable with the water which the Cauvery affords and therefore with the number of consumers large and small, rapidly increasing the necessity of a completely new installation elsewhere to be operated in parallel with or separately from that at Sivasa mudram has been recognised. Two projects offer themselves. The first would involve the use of the River Shimsha, a tributary of the Cauvery which has natural falls and the second known as the Mekadatu project would have its power house on the Cauvery 25 miles down river from Sivasa mudram and just within the borders of Mysore State adjacent to the Madras Presidency. The head of water available at Sivasa mudram is 400 feet that on the Shimsha 618 feet net which would generate 39 500 h.p. At Mekadatu the Cauvery runs in rapids and a dam and a channel 20 000 feet long with a 22½ feet bed would be necessary. There would be three generating units, each giving an output of 4 000 h.p. Future extensions yielding an additional 8 000 h.p. could be made. The progressive spirit which has marked the management of the works since their inception now characterises the manner in which the problem of further extensions are being considered.

Works in Kashmir

A scheme of much importance from its size but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the country is one installed a few years ago by the Kashmir Darbar utilising the River Jhelum near Baramulla, which lies thirty-four miles north west of Srinagar. The head works of the Jhelum power installation are situated six and a half miles from the power house and the main connection between the two is a great timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the generation of 20 000 electrical horse power. Four pipes 600 feet long lead from the forebay to the power house and from forebay to water wheel there is an effective head of 395 feet. There are four vertical waterwheels each coupled on the same shaft to a 1 600 k.w., 3 phase 2 300 volt 25 period generator running at 500 r.p.m. and each unit is capable of taking a 25 per cent overload which the generator is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15 000 k.w. generating plant being installed within it. Two transmission lines run side by side as far as Baramulla 31 miles distant at which point they terminate. The other continues to Srinagar a further 84 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating cranes for dredging the river and draining the swampy countryside and rendering it available for cultivation but these operations have temporarily been curtailed so that only one dredger is now in operation. The lighting of Baramulla has been taken in hand with satisfactory results and it is expected that the lighting demand will rapidly increase and that a small demand for power will soon spring up. At Srinagar the electric illuminations at the State silk factory where current is supplied not only for driving machinery and for lighting but for heating. The greater part of Srinagar city is now electrically lighted and during the past year a motor load of over 100 k.w. has been connected with the mains motors being hired out to consumers by the Electrical Department. This step was taken with a view to educating the people in the use of electric power and it has been entirely successful.

Recent Progress

Apart from the development of the three projects in the Bombay Presidency the past few years have witnessed comparatively little progress in hydro-electric works. A small plant was completed and put into operation at Naini Tal during 1923 and the erection of another small plant was commenced at Shillong but otherwise there is nothing to record. It is interesting to note however that preliminary investigations are proceeding with a view to the erection of hydro-electric plants in various parts of India. In the tea districts of Kalimpong and Kurseong for example it is proposed to harness a promising water power site and to supply current to an important area in which are situated more than two hundred tea factories.

The Suttie Hydro Electric Project at one time appeared to be one of the most promising propositions in the country but owing to financial considerations it has now been indefinitely shelved. In Southern India a large number of sites have been investigated and of these one on the Pykara river in the Nilgiris and another on the Kallar river on the borders of Travancore have been selected for development if and when the financial considerations can be satisfactorily settled. The Pykara river scheme is of some magnitude and it is estimated that upwards of 50,000 horse power will be available for electro-chemical industries which it is proposed to establish at Calicut on the West Coast. The Kallar river project is very much smaller but it is interesting in being a scheme in which the Government of Madras and the Travancore Darbar will be jointly responsible for the power house will be located on the British side of the river and the current transmitted to and distributed in Travancore State. Finally there is a big combined project of hydro-electricification and irrigation in Hyderabad State. This scheme is still very much in the air but the fact that it is under consideration is worthy of being placed on record in view of the somewhat unusual circumstance

in India, that the tail water from the turbines will be made available for agricultural purposes and not allowed to run to waste.

The fact that the Bombay Electric Supply and Tramways Company has shut down its steam driven generating plant and now takes its supply in bulk from the various Tata companies has been recorded above and it is of more than passing interest to note that the Poona Electric Supply Company has put forward a similar proposition with effect from the time when power is available from the Tata Power Company's installation at Nila Mula. This is a phase of hydro-electric distribution which is quite in its infancy in India but it is possible to foresee the time when every village within a couple of hundred miles of a hydro-electric power station will receive its supply of electric current in bulk thus greatly reducing capital and administrative charges and minimising the price of current to the consumer. It is a system which has become something of a fine art in California where current is transmitted by overhead wires for many hundreds of miles at a pressure of 300,000 volts or double the pressure commonly employed in India for overhead long-distance transmission.

Local Self-Government

No field of the administration of India is likely to be more profoundly affected by the reforms of 1919 than local government. This is one of the subjects transferred to Indian ministers and there are many signs that the power will be freely used for the purpose of experiments in the direction of building up a more and more vigorous local bodies. On the whole the progress of local government in India for the past quarter of a century has been disappointing. The greatest successes have been won in the Presidency towns and particularly in the Municipality of Bombay. The difficulties in the way of progress were manifold. Local government had to be a creation—the devolution of authority, from the Government to the local body and that to a people who for centuries had been accustomed to autocratic administration. Again the powers entrusted to local bodies were insignificant and the financial support was small. There are however many indications that the dry bones of the moribund system are stirring. Inasmuch as this being a transferred subject it is entirely provincial there will be the widest variation between province and province according to the special needs of each. We can indicate here only the broad tendencies with the expression of opinion that this field will be one of the most important in the growth of nation building forces in British India.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation and from the villages are built up the larger administrative entities—tahsils, sub-divisions and districts.

"The typical Indian village has its central residential site with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands consisting of a cultivated area and (very often) grounds for grazing and wood-cutting. The inhabitants of such a village pass their life in the midst of these simple surroundings welded together in a little community with its own organisation and government which differ in character in the various types of villages, its body of old-fashioned customary rules and its little staff of functionaries, artisans and traders. It should be noted however that in certain portions of India, e.g. in the greater part of Assam, in Eastern Bengal and on the west coast of the Madras Presidency the village as here described does not exist the people living in small collections of houses or in separate homesteads. —(*Gazetteer of India*)

The villages above described fall under two main classes viz.—

Types of Villages.—“(1) The sovereignty or *raiyatwari* village which is the prevalent form

outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers though some of the non-cultivated lands may be set apart for a common purpose such as grazing and waste land may be brought under the plough only with the permission of the Revenue authorities and on payment of assessment. The village government vests in a hereditary headman known by an old vernacular name such as *paisa* or *reidsa* who is responsible for law and order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled.

(2) The joint or landlord village the type prevalent in the United Provinces, the Punjab and the Frontier Province. Here the revenue was formerly assessed on the village as a whole, its incidence being distributed by the body of superior proprietors and a certain amount of collective responsibility still as a rule, remains. The village itself is owned by the proprietary body who allow residences to the tenantry, artisans, traders and others. The waste land is allotted to the village, and if wanted for cultivation is partitioned among the shareholders. The village government was originally by the *panchayat* or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities, but the artificial character of this appointment as compared with that which obtains in a *raiyatwari* village is evidenced by the title of its holder, which is generally *landward* a vernacular derivative from the English word *word*. This is the type of village to which the well known description in Sir H. Maine's *Village Communities* is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants or labourers under them.

Village Autonomy.—The Indian villages formerly possessed a large degree of local autonomy since the native dynasties and their local representatives did not as a rule concern themselves with the individual cultivators, but regarded the village as a whole or some large landholder as responsible for the payment of the Government revenues and the maintenance of local order. This autonomy has now disappeared owing to the re-establishment of local civil and criminal courts, the present revenue and police organisation, the increase of communications, the growth of individualism and the operation of the individual *raiyatwari* system which is extending even in the north of India. Nevertheless the village remains the first unit of administration, the principal village functionaries—the headman, the accountant and the village watchman—are largely utilised and paid by Government and there is still a certain amount of common village feeling and interests.

Panchayats.—For some years there was an active propaganda in favour of reviving the village council-tribunal, or *Panchayat* and the Decentralisation Commission of 1908 made the following special recommendations:—

'While therefore, we desire the development of a *panchayat* system, and consider that the objections urged thereto are far from insur-

mountable, we recognise that such a system can only be gradually and tentatively applied and that it is impossible to suggest any uniform and definite method of procedure. We think that a commencement should be made by giving certain limited powers to *Panchayats* in those villages in which circumstances are most favourable by reason of homogeneity, natural intelligence and freedom from internal feuds. These powers might be increased gradually as results warrant and with success here it will become easier to apply the system in other villages. Such a policy which must be the work of many years will require great care and discretion, much patience and judicious discrimination between the circumstances of different villages, and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

This is however still mainly a question of future possibilities and for present purposes it is unnecessary to refer at greater length to the subject of village self-government. Various measures have been passed, but it is too early to say what life they have. The Punjab Government has passed a Village *Panchayat Act* which enables Government to establish in a village, a system of conciliators to whom certain local matters including judicial power both civil and criminal of a minor character may be assigned. In Bihar a Village Administration Act has been passed for the administration of village affairs by villagers themselves in dealing minor civil and criminal cases. Other Governments are taking steps to the same direction.

Municipalities.—The Presidency towns had some form of Municipal administration first under Royal Charters and later under statute from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal which was practically inoperative was followed in 1850 by an Act applying to the whole of India. Under this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage municipal affairs and authorised the levy of various taxes but in most provinces the commissioners were all nominated and from the point of view of self-government these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government in their Resolution of that year introducing the system of provincial finance referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical charity and local public works. New Municipal Acts were passed for the various Provinces between 1871 and 1874 which among other things extended to the elective principle but only in the Central Provinces was popular representation generally and successfully introduced. In 1881 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and

responsibility were conferred on the committees of many towns by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility some items of provincial revenue suited to and capable of development under local management being transferred with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day.

The Present Position—There are some 767 Municipalities in British India with something over 18 million people resident within their limits. Of these municipalities roughly 687 have a population of less than 10,000 persons and the remainder a population of 50,000 and over. As compared with the total population of particular provinces, the proportion resident within municipal limits is largest in Bombay, where it amounts to 10 per cent, and is smallest in Assam, where it amounts to only 1 per cent. In other provinces it varies from 4 to 9 per cent. of the total population. Turning to the composition of the Municipalities, considerably more than half of the total members are elected and there is a steady tendency to increase this proportion. Ex-officio members are only 7 per cent. and nominated 25 per cent. Elected members are almost everywhere in a majority. Taking all municipalities together, the non-officials outnumber the officials by nearly six to one. The functions of municipalities are classified under the heads of *Public Safety, Health, Conservancy and Instruction*. For the discharge of these responsibilities there is a municipal income of Rs. 14.03 crores derived principally from taxation just over one-third coming from municipal property contributions from provincial revenues and miscellaneous sources. Generally speaking, the income of municipalities is small, the four cities of Calcutta, Bombay, Madras and Rangoon together providing nearly 40 per cent. of the total. The heaviest items of this expenditure come under the heads of *Conservancy and Public Works*, which amount to 15 per cent. and 14 per cent. respectively. Water supply comes to 13 per cent., Drainage to 6 per cent. and Education to no more than 8 per cent. In some localities the expenditure on education is considerably in excess of the average. In the Bombay Presidency excluding Bombay City for example the expenditure on education amounts to more than 21 per cent. of the total funds while in the Central Provinces and Berar it is over 17 per cent.

District Boards—The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to district and local Boards. In almost every district of British India save in the provinces of Assam, there is a board subordinate to which are two or more sub-district boards. While in Bengal, Madras and Bihar and Orissa there are also Union Committees. Throughout India at large there are some 221 district boards with 536 sub-district boards and more than 800 Union Committees. This machinery has jurisdiction over a population which was some 218 millions in 1919-20. Leaving aside the Union Committees the

members of the Boards numbered a little over 14,000 in 1922-23 of whom 62 per cent. were elected. As in the case of municipalities the tendency has been throughout India to increase the elected members at the expense of the nominated and the official members. The Boards are practically manned by Indians who constitute 98 per cent. of the whole membership. Only 11 per cent. of the total members of all boards are officials of any kind. The total income of the Boards in 1922 amounted to Rs. 11.32 crores, the average income of each district board being Rs. 5,00,000. The most important item of revenue is provincial rates which represent a proportion of the total income varying from 25 per cent. in Bombay and in the N. W. F. Provinces to 63 per cent. in Bihar and Orissa. The principal objects of expenditure are education which has come remarkably to the front within the last three years and civil works such as roads and bridges. Medical relief is also sharing with education though in a less degree the lion's share of the available revenue.

Improvement Trusts—A notable feature in the recent sanitary history of India is the activity played by the great cities in the direction of actual improvements. In Bombay and Calcutta the Improvement Trusts are continuing their activities which are described in a separate chapter (q.v.). In Bombay the work of the Improvement Trust is being developed by the Bombay Development Directorate. Other cities are beginning to follow the examples of these great cities and Improvement Trusts have been constituted in Calcutta, Lucknow and Allahabad and in the United Provinces and in several of the larger cities of the Provinces of India. Their activities have however been severely curtailed by the financial stress.

Provincial Progress—There was passed in Bengal in 1913 a Village Self Government Act embodying the policy of constituting Union Boards at the earliest possible date for groups of villages throughout the province. The number of these boards continues to increase rising from 1,500 to more than 2,000. Though they are in their infancy as yet many of them show a remarkable aptitude for managing their own affairs.

In Bombay the development of village self government is also proceeding as the result of an Act for constituting and increasing the power of village committees which was passed in 1920 by the Legislative Council. In this Presidency some 75 out of 157 municipalities had a two-thirds elected majority of councillors in the year 1920 and a distinct step forward has been projected by the administration in the direction of liberalizing the constitution of all municipal bodies. The policy of appointing a non-official president has been extended both to district and sub-district boards and a large number of non-officials have also been appointed presidents of sub-districts (*taluka*) boards. In Madras also the institutions of local self government continued to progress in an encouraging manner. The number of district boards in the Presidency was 24 with 682 members. The number of sub-district boards rose from 119 to 121. The total number of Municipal Councils rose from 73 to 80 and the proportion of Indian

to European and Anglo-Indian members further increased. In 1902 there were 54 municipal councils consisting entirely of Indian members as against 41 in the previous year. The average imposition of taxation per head of population is still very low being only about Rs. 2. Nonetheless 28 towns in the Presidency possess a protected water supply and water works schemes are either under execution or in contemplation in a number of others. The number of educational institutions maintained by municipal councils rose to 1,016 which was 99 more than in the previous year while the net educational charges amounted to Rs. 1,41 lakhs.

In the United Provinces the new District Boards which consist of non-official members only with elected non-official chairmen were plunged straight way into financial difficulties. In some cases the necessity for retrenchment was immediate resulting in the curtailment of medical relief and of allotments for the ordinary repairs of roads. Additional taxation has so far not been generally imposed and the Boards are still suffering from inexperience in husbanding public money and obtaining the full value for their expenditure. In the case of Municipal Finance there has been some cause for the better. The new Municipalities have shown a great interest in all forms of civic activity but they are still hampered in their work by political and communal objections. They are reluctant to impose new taxation but a considerable programme of expenditure lies before them. The restoration of municipal roads, the abatement of the dust nuisance and the renewal of water works plant are problems calling almost everywhere for immediate solution. On the whole the position is more hopeful since the rapid progress which was being made towards Municipal insolvency has been arrested.

In the Punjab municipal administration continued to show improvement the general attitude of the members in regard to their responsibility being promising for progress in the future. (Generally speaking the finances are in a more satisfactory position than was the case in previous

years. Expenditure on water-supply schemes is steadily increasing and the capital cost of schemes executed during 1924-25 amounted to over Rs. 11 lakhs as compared with Rs. 11 lakhs in the previous year.

The Acts of considerable importance providing for the creation of improvement trusts for the more effective administration of smaller towns and for the establishment of village panchayats have been passed. Further Municipalities and District Boards have been reconstituted in a more democratic form.

In the Central Provinces the year 1920 witnessed the passing of a Local Self Government Act which will guide into proper channels the undoubted growing interest in public matters. The continued reduction of official members and chairman and the wider power of control given to local bodies will be an incentive to the development of local self government leading to an increased sense of public duty and responsibility. Another very important measure regulating municipalities was passed into law in 1922. Its chief features are the extension of the Municipal franchise, the reduction of official and nominated members, the extension of the powers of Municipal Committees and the relaxation of official control.

In the North West Frontier Province the institution of local self government is somewhat of a foreigner with certain of the municipal committees still in the discharge of their responsibilities and meetings are reported to be infrequent but the attendance of non-official members is gradually increasing. Concerning Municipal administration the Local Government reports that the members continue to take a very great interest in their duties and that their attitude towards the responsibilities imposed upon them is on the whole satisfactory. Communal feeling shows itself in certain localities but in many instances offset by the public spirit and initiative of individual members and there are considerable symptoms of advance in independence of action and in the smooth working of the Committees.

Local Government Statistics

Municipalities.—With this general introduction we can now turn to the statistical results of the working of Local Self Government. The following table gives information as to the constitution of municipal committees, taxation &c. in the chief provinces in 1925-26—

Province.	Population within Municipal Limits	Number of Municipalities	Number of Members of Committee	Classification of Members		Income	Incidents per Head of Population					Expenditure.	
				Official	Non Official		Rate and Taxes	Total Income (excluding Excess and Deficit)	Rs	p	Rs		p
Presidency Towns													
Calcutta	1,077,264	1	90	1	89	358,547.6	16 1 8	20 4 9	2,98,67,889				
Bombay City	1,175,911	1	106	3	103	24,016,077	23 2 10	26 1 1	24,39,86,987				
Madras City	524,401	1	46	1	45	90,50,421	7 10 6	11 8 11	90,46,893

Calcutta Improvement Trust

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas laying out or altering streets providing open spaces for purposes of ventilation or recreation demolishing or constructing buildings and rehousing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must as in the case of the corresponding Bombay body upon which the Calcutta Trust was to a large extent modelled be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1818 owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 80 years have to provide for the housing of 225,000 persons. The population of Calcutta proper which includes all the most crowded areas was 649,995 in 1881 and increased to 801,251 or by 25 per cent by 1901. The corresponding figure according to the 1911 census was 896,087 and this had increased by 1921 to 993,508.

The problem of expansion was difficult because of the peculiar situation of Calcutta which is shut in on one side by the Hooghly and on the other by the Salt Lakes.

Preliminary investigations continued for several years so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a scheme involving the expenditure of Rs. 8,22,00,000, and for special local taxation to this end. It also provided for the appointment of a whole time chairman of the Board of trustees and the membership of the Trust was fixed at eleven.

The following formed the Board of Trustees in 1928: 1927 Mr A. M. C. B. S. C. S. Chairman, Mr J. U. Mukherjee Bar at Law, Off. Chief Executive Officer Calcutta Corporation (*ex-officio*), Babu Sallapati Chatterjee elected by the Corporation of Calcutta under section 7 (1) (a) of the Calcutta Improvement Act 1911, Rai Nalini Nath Seth Bahadur elected by the elected Councillors, Corporation of Calcutta under Section 7 (1) (b) of the Calcutta Improvement Act 1911 as modified by the Amendment Act of 1926, Mr Chandra Chandra Biswas, elected by Councillors other than elected Councillors of the Corporation of Calcutta under Section 7 (1) (c) of the Calcutta Improvement Act 1911 as modified by the Amendment Act of 1926, Mr G. Morgan elected by the Bengal Chamber of Commerce, Babu Hari Sankar Paul, elected by the Bengal National Chamber of Commerce, Mr H. Sudlow, Mr A. Cassels I.C.S. Rai Ram Dey Chokhany Bahadur Lt. Brijoy Prasad Singh Roy appointed by the Local Government.

During the 15 years that it has now been at work, the Trust have decided and partly or entirely carried through several improvement schemes for opening up congested areas laying out or widening streets and providing open spaces.

In Central Calcutta many highly insanitary houses have been done away with and several roads of an improved type laid out the most

important of which is the Central Avenue 100 ft wide which at present extends from London Street to Chowringhee and will shortly be extended to Shambazar on the north.

In the north of the City a park and play ground have been completed and several wide roads driven through that highly congested area. The approaches to the City have also been adequately widened.

The Suburban Areas to the South and South East of Calcutta required greater attention and extensive development schemes were undertaken. Several open spaces and squares have been made in various parts. Insanitary tanks requiring approximately a crore of ft of earth have been filled up. Bessra Road which forms the southern approach to the town has been widened to 150 ft for a length of one mile and 100 ft for a length of another mile. It now gives a most pleasant drive from Chowringhee to Tollygunge. To improve the drainage of this area a 100 ft wide East to West road from Ballygunge Railway Station to Cheli Bridge and for recreation an artificial lake of 16 bighas with adequate grounds are being made.

Lastly for the housing of the displaced population the Trust has undertaken on a large scale the following schemes:—

In the early stages three blocks of chawls were built in Wards Institution Street for persons of the poorer class. It was found, however that the persons displaced preferred to take their compensation and migrate to some place where they could erect *bustis* of their own the class of structures they were accustomed to live in. These chawls were then filled with persons of limited means e.g. School Masters, poor Students, Clerks and persons of the artisan class. As many as 1,00 people are housed in these chawls these buildings in luding land cost Rs. 44,368 and are let at very low rents—ground floor rooms at Rs. 5 per mensem and top floor rooms at Rs. 6 per mensem each room measuring 12 X 12 with a 4 ft verandah in front opening on to a central passage 7 ft wide.

As these chawls failed to attract the people for whom they were meant the Board next tried an experiment in providing sites for *bustees*. Two sites with a lettable area of 16 bighas were acquired within the area of Manikotla Municipality but they failed to attract because they were out of the way and were expensive.

KERRALA TANK LAKE RE-HOUSING SCHEME.—In this scheme 4 detached and 35 semi detached houses were built. The detached houses were sold last year as this scheme never became popular with the class of tenants for whom they were originally intended. Owing to this unpopularity the Board further decided to throw open to tenants of all classes 15 out of the remaining 35 semi detached houses. This change of policy however produced no effect on the letting. It is now under contemplation to make some structural alterations so as to ensure more privacy to persons living in these houses or in the alternative to sell these buildings for what they will fetch

Owing to want of suitable tenants the entire dwellings in herhala Tank Re housing scheme had been sold by private sale shortly after the 31st March 1927.

BOW STREET RE HOUSING SCHEME—Seven blocks of buildings containing one roomed two roomed and three-roomed suits have been con-

structed to re-house Eurasians and Anglo Indians displaced by the operations of the Trust. This scheme has proved a striking success.

PAIKPARA RE HOUSING SCHEME—This scheme has an area of 36 bighas well laid out in 196 building sites. Special facilities are offered to dis-

housed persons for securing land in this scheme.

BOMBAY IMPROVEMENT TRUST

The transfer of the Trust to the Municipality has now been effected by an Act of Legislature called The City of Bombay Improvement Trust Transfer Act 1925 (Bombay Act No. XVI of 1925). By virtue of this Act the powers and duties of the Trustees for the Improvement of the City of Bombay have been transferred and the property and rights belonging to the said Trustees have now been vested in the Municipal Corporation for the City of Bombay which is referred to as the Board. The President of the Corporation being also the President of the Board.

The execution of the powers and the performance of the duties vested in the Board is entrusted to a committee called the Improvements Committee subject to the general control of the Board. The Improvements Committee consists of eighteen members that is to say, fourteen elected members and four nominated members. Of the elected members eleven are elected by the Board, one by the Bombay Chamber of Commerce, one by Indian Merchants Chamber and one by the Millowners Association out of their own bodies respectively. The nominated members are appointed by Government by notification three of them being chosen from among the following—

- (i) The Director of Development, Bombay
- (ii) The Chairman of the Bombay Port Trust
- (iii) The Collector of Bombay and
- (iv) The Executive Engineer, Presidency District,

and the fourth by Government to represent labour from among the members of the Board.

The Municipal Commissioner has the right of being present at a meeting of the Committee and of taking part in the discussions thereat but he shall not vote upon or make any proposition at the meeting. The Chief Officer who is the Chief Executive Officer is appointed by the Board subject to confirmation of Government. He has the same right of being present at a meeting of the Board and of the Committee and of taking part in the discussions thereat as a member of the said Board or Committee but he must not vote upon or make any proposition at such meeting. He exercises general supervision and control over the acts and proceedings of all officers and servants of the Board in matters of executive administration and is directly responsible to the Board.

The specific duties of the Trust are to construct new and widen old streets, open out crowded localities, construct sanitary dwellings including those required for the Bombay City Police. The Trust derives its income from certain Government and Municipal lands vested in the Trust and the schemes it has undertaken.

The Trust receives a contribution from Municipal revenues amounting to a definite share in the general tax receipts—approximating to 1 per cent on assessments and subject to no maximum. Works are financed out of loans raised by the Board. By the close of 1925-26 the Board had raised Rs. 1,24 lakhs by loans and their total capital receipts (including grants of Rs. 54 lakhs received from Government) amounted to Rs. 14.3 lakhs out of which they had spent Rs. 11.3 lakhs on the improvement of Government and Municipal lands temporarily vested in the Trust and Rs. 16.92 lakhs on their acquired estates and office buildings. The Trust have provided in their chawls accommodation for 31,000 persons.

The present Chairman and members of the Improvements Committee are as follows—

(a) Elected by the Board—

Sir Vasantrao Anandrao Dabholkar Kt C.B.F. (Chairman)
Mr K. F. Nariman F.A. LL.B. & L.C.
Dr A. G. Viegas L.M. & S.
Mr Hoosenally M. Babintoolah B.A. M.L.C.
Mr Mirza Ali Mohammed Khan M.A. LL.B.
Mr Naoroji M. Dumasia.
Dr S. S. Batliwala, F.R.S. L.S. & S.
Dr K. E. Dadachanji L.M. & S.
The Honble Sir Phiroze C. Sethna Kt C.B.E.
Mr Sayajee Lakshman Shilam B.A. LL.B.
Mr L. C. Horajman

(b) Elected by the Chamber of Commerce—

Mr Harris T. Corrie

(c) Elected by the Indian Merchants Chamber—

Mr S. B. Billimoria, M.B.E.

(d) Elected by Millowners Association—

Mr C. N. Wadia, C.I.E.

(e) Nominated by Government—

The Director of Development
The Chairman, Bombay Port Trust
The Collector of Bombay
Mr Ganpat Krishnaji Borade
Municipal Commissioner—Mr H. B. Clayton C.I.E. 1928

Chief Officer—Mr R. H. A. Delves, F.R.I.
Secretary and Chief Accountant—Mr Lawasjee Pestonjee Gorwalla B.A. (On leave)
Mr Narayan T. Chawathe (Acting)

Chief Engineer—Mr J. F. Watson, B.E., M.I.C.E. (On leave) Mr T. E. S. Synnersley A.M.I.C.E. (Acting)

Trust Architect—Mr M. Framjee L.O.B. L.M. I.B.A. (Acting)

Land Manager—Mr M. S. Bharucha, L.O.B.
Estate Agent—Mr J. T. Burge, F.R.I.

Bombay Development Scheme.

The Bombay Development Scheme in its widest sense represents concerted attempts by the three local bodies the Municipality the City Improvement Trust and the Port Trust each working in its own sphere, and by the Government to secure the rapid and adequate development of the city and suburbs of Bombay.

The Municipality is developing various areas in the city which will result in providing increased residential and business accommodation. The Mahim scheme will provide main avenue running north to south in addition to the 40 feet road from Worli to Mahim Bazar and a large number of cross roads. It aims at the development of an area in which it may be possible to house, approximately a population of 25,000. Provision has been made for a central park with a frontage on the bay and for a smaller park near the southern end of the area. The main contribution of the Municipality however, towards the general development scheme lies in the great water and drainage projects which it is undertaking and which are essential for the health and well being of the city.

Improvement Trust—The Improvement Trust are developing the north of the Island on a large scale completing their old schemes Dadar Matunga and Elion Matunga and carrying on with the new schemes adopted in 1919 the total area of which amounts to about one ninth of the area of the whole Island. Of the latter the Worli scheme will provide for three classes of people the richer class on the sea face the middle class on the main road, and a large area for the working classes on land reclaimed in the neighbourhood of the mills. At Dharavi the scheme for removing the tanneries and filling in the swamps to the south is in abeyance. The Sewri Wadala scheme is intended almost entirely for the working and lower middle classes and the area included in it will when the contemplated railway connections are made, be within easy access by rail from Victoria Terminus.

Port Trust—The construction of the new cotton depot on the Mazgaon Sewri reclamation has been completed and has released for other purposes the ground now occupied by the Cotton Green.

Programme—The works for which Government are directly responsible are as follows—

(a) The Industrial Housing Scheme providing one room tenements for the working classes to meet an actual existing shortage of accommodation as reported by the Municipal Commissioner in 1919.

(b) The Back Bay Reclamation to reduce congestion in the business area and provide residential accommodation and open spaces in the south of the City.

(c) The development of South Salsette including Frombay partly for residential and partly for industrial purposes.

(d) The provision of other industrial areas at greater distances.

(e) The improvement of communications to the suburban areas.

The question of special measures for the development of Bombay was under the consideration of Government for many years. The

results of the last general survey of the subject are contained in the report of the Bombay Development Committee submitted in May 1914. The war made it impossible then to carry out any large schemes. When the war had come to an end it was found that owing to the large increase in the City's population during the war and the high prices of materials conditions were much worse than before, and that more rapid action was necessary.

Scope of Work—In a speech to the Legislative Council in August 1920, His Excellency the Governor explained that the industrial housing scheme which Government considered essential, would be carried out by them direct instead of being entrusted to the Municipality or the Improvement Trust because of the very heavy liabilities which already rested on those bodies. He introduced a Bill for the levy of a cess of one rupee per bale on cotton imported into Bombay the proceeds of which would be used partly to provide additional revenue for the Municipality in view of its large programme of expenditure, partly to meet the losses anticipated on the housing scheme and partly to assist development schemes in Salsette.

He announced Government's decision to establish a new Development Department and Direct rate which was at once a Department of Government and an executive organisation and was constituted a few months later. Some of the programme of work of the Department has since been completed but the greater part of it has been suspended for the present owing to depression in the land market while the construction of more chawls has been held in abeyance owing to the decrease in population since the census of 1921. The Development Direct rate was therefore abolished in January 1927 and the executive organisation is at the moment under reconstruction. There is still a special branch of the Government Secretariat—the Development Department which deals with development operations.

Personnel—The whole Development Department is in charge of the Honourable Sir Cowasji Jehangir (Jr.) K. I. I. O. B. E.

The Back Bay Reclamation Scheme is in charge of a Chief Engineer assisted by two Deputy Chief Engineers, one for the Dredging section and the other for the Marine Lines (Alaba and Quarry Section).

The technical control over all works other than the Back Bay Scheme was transferred to the Public Works Department towards the end of the year 1926.

The Government of India have appointed a special Audit and Accounts Officer for the Bombay Development Scheme and have authorised his appointment as Deputy Financial Adviser under a Financial Adviser who is an officer of the Finance Department.

R. D. BELL (I.E. I.C.S. Secretary to Government Development Department and Commissioner Bombay Suburban Division and Settlement Commissioner and Director of Land Records Bombay Suburban Division, (also holds the appointment of Land Manager)

H ST C SMITH J P Deputy Secretary to Government Development Department and Assistant Commissioner Bombay Suburban Division

R B VAOHHA, M.A J P Assistant Secretary to Government Development Department

K S FRANK CLE B.A LCE FUB Chief Engineer Back Bay Reclamation Scheme

E M DUGGAN B.Sc A.M Inst C.E Deputy Chief Engineer Reclamation Branch Marine Lines Colaba and Quarry Section

C R BRIMS Deputy Chief Engineer Reclamation Branch, Dredging Section

T HARVEY M.Sc MICE Officer on special duty in connection with the Back Bay Reclamation Scheme (on leave)

G D KUNDAN M.R San I (Lond.) A.M.I.E.S (Glas.) Marine Surveyor

K R DOCTOR F.S.I. L.C.E. A.M.I.E. Personal Assistant to the Land Manager

S M BHARTOHA, B.A Collector Bombay Suburban District and Salsette Development Officer (Also Superintendent Bombay Suburban Survey and Land Records Bombay Suburban Division)

Audit and Finance

C G Freke B.A (Cantab.) I.C.S. Financial Adviser to Government

S M L Bean Deputy Financial Adviser to Government and Audit and Accounts Officer Bombay Development Scheme

Military Lands Scheme

S M L Bean Secretary Board of Control
I C DARE B.A F.R.S.A. F.S.I., A.M.I.E.
M.I.S.R. Executive Engineer

Industrial Housing—In Bombay City apart from some minor schemes affecting Government properties, the work of the Development Department consists of Industrial Housing and the Back Bay Reclamation. There are four housing schemes and Government have decided that till these are fully utilised further new schemes are not to be embarked on the schemes which are now complete are as follows—

- 1 Nalgam—42 chawls
- 2 DeLisle Road—32 chawls
- 3 Worli—121 chawls
- 4 Sewri—12 chawls

Each chawl with two exceptions contains 80 rooms of 160 square feet superficial area. There is a *nahani* in each room and each floor has its own water-supply and modern sanitary conveniences. The areas in which the chawls are situated are conveniently situated near the mills and other factories and are at the same time open and healthy and well provided with open spaces. Out of the 18,534 tenements ready for occupation over 8,000 are occupied. Provision has been made for shops in the chawls and at Worli there is a specially constructed market place. The Bombay Municipality have opened vernacular schools in the chawls at DeLisle Road Nalgam and Worli and the Infant Welfare Society is carrying on welfare work at those chawl centres. A Municipal dispensary will be opened shortly at Worli.

The average economic rent of the chawls works out approximately to Rs 16 per month per tenement but the rents actually charged for rooms let singly are as follows—

	DeLisle Road	Nalgam.	Worli	Sewri
	Rs a	Rs a	Rs a	Rs a
Ground floor rooms	9 8	7 0	5 0	7 0
First floor rooms				
Second floor rooms				
Third floor rooms	9 0	7 0	5 0	7 0

On this basis there will be when the chawls are fully occupied an annual loss of Rs. 16 lakhs most of which is covered by the revenue from the cotton cess. Owing to the large number of vacancies the loss at present is much more than this. The vacancies are mostly at Worli where 78 out of 121 chawls have not been brought into use. At Nalgam there are ten unoccupied chawls and at DeLisle Road three.

To large employers of labour including Government Departments to societies institutions and similar organisations or bodies and to private individuals acting on behalf of any community or section of the public concession rents as under are charged if whole chawls are rented—

Chawl area	Annual rent per chawl Rs
Worli	3,582
Nalgam	5,478
DeLisle Road	7,398

The above rents include charges for main tenance and repairs sweepers and sanitary stores plus municipal taxes which may vary. These rents are equivalent to an inclusive rent of about Rs 4 Rs 5 11-0 and Rs 7 11-0 per room per annum at Worli Nalgam and DeLisle Road respectively. In fixing them a deduction has been made from the usual rents on account of vacancies bad debts and the cost of rent collection. The offer has so far been availed of by the B B & C I Railway Company who have rented five chawls at Worli for housing their employees and by the Bombay Municipality who have taken one whole chawl for housing the employees of the King Edward Memorial Hospital.

As an experimental measure one chawl at DeLisle Road and one chawl at Nalgam have been converted into two and three-roomed tenements.

Salsette—In Salsette the widening and tar macadamising of the surface has been completed

in the greater portion of the Bandra-Andheri Road, and the road has been transferred to the Public Works Department for maintenance. The Malad-Marve Road including the construction of bridge has been completed and transferred to District Local Board while the first section of the Koliwada Bora Road which will afford direct road communication between Bombay and Trombay has also been finished. Quarrying and reclamation works have been carried out at Gilbert Hill Andheri, and progress has been made in town planning schemes. The development scheme at Khar between the Khar Station and the sea known as Khar Model Suburb and a small scheme at Chapel Road Bandra, have been very successful. These two schemes provide for about 863 and 140 building plots respectively. The Khar Scheme has been developed by the aid of a new railway station of the same name; most of the roads are complete, the area is now well built upon and sales of building plots continue steadily. The Chapel Road scheme is quite complete, the roads have been transferred for maintenance to the Municipality and only nine plots are now available for sale.

A small development scheme for an area of about 16 acres in Dandi village has also been worked out and a few plots therein have been sold. All roads in the scheme have been completed and a direct communication between the Bandra railway station and the scheme area has been established by the completion of the Turner Road extension through the Salsette Catholic Co-operative Housing Society's land.

In Trombay the schemes in hand are (i) Trombay North East which is intended to provide for (a) a new municipal slaughter house, tanneries, dye works and other noxious trades which ought to be removed from the City residential areas for the people employed in the tanneries, etc. and (ii) Trombay North West which is intended to provide a residential area for the lower middle class on good land surrounding on three sides the existing Chembur village and extending to the south and east. In Trombay North East development operations have been stopped for a considerable time owing to the curtailment or suspension by the Bombay Municipality and the Bombay Improvement Trust of schemes in Bombay City with which the scheme at Trombay North East was linked. A large portion of the area included in Trombay North East scheme has recently been demarcated.

In Trombay North West the development of an area of 128 acres known as Chembur Garden Suburb to provide about 450 building plots has been worked out in detail. So far about 255 plots have been actually developed by the construction of roads and provision of a piped water supply out of which an area of 144,000 sq. yards has been disposed of. A passenger service between Kurla and Chembur is run by the G. I. P. Railway and it is well patronised especially in the mornings and evenings. As many as 40 trains are run per day. The line has been extended up to Mandala which will serve the new military explosives depot as well as the tannery area.

The Salsette-Trombay Railway runs from Anik to Kurla and then through the Shahr

area lying between the G. I. P. and B. B. & C. I. Railways to Andheri. This railway is now complete as a single line. The main objects of the railway was to bring stone for road-making in Salsette from the quarries in Trombay and to provide a tramway service to open up the areas, through which it passes which are at present without any means of communication. As road making in Salsette is in abeyance owing to the prevailing stagnation in the land market the line is not required for stone traffic at present. Arrangements have been concluded with the G. I. P. Railway for the working and maintenance of the line as a tramway for a period of two years. The line is expected to be opened for traffic in the near future.

The Salsette water-supply scheme obtains water from the Bombay Municipality's Tuli and Vehar mains and supplies it in bulk to the Municipalities of Bandra and Kurla. The Development Department has made its own distribution scheme in the areas of Andheri and neighbourhood. Vile Parle Santa Cruz Juhu Khar Ghatkopar and the two schemes in Trombay described above.

In order to help people of moderate means to become owners of their homes, Government have sanctioned a scheme of financial assistance to intending purchasers of plots in the residential schemes of the Development Directorate. The essential feature of this scheme is that Government will advance at 6 per cent interest a sum equal to three-fourth of the cost of land and half the cost of the building which it is intended to erect. The advance being repayable in instalments spread over a period not exceeding fifteen years. Another scheme for permanent Government servants on slightly easier terms has also been sanctioned. Government have also sanctioned the extension of the benefits of the State Aided Buildings Scheme to Co-operative Housing Societies for building houses on the tenant ownership system. The essential feature of this scheme is that Government will advance to Co-operative Housing Societies which acquire building plots in the estates managed by the Development Department subject to certain conditions, sums to the extent of three-fourth of the value of any plot plus half the estimated cost of the building proposed to be erected on it with interest at 5 1/2 per cent per annum the advance being as in the former cases repayable in instalments spread over a period not exceeding 15 years.

Industrial Town.—The Ambernath Development Scheme aims at creating a new township to establish industries with all modern facilities. During the year no further sites were sold at Ambernath. The approach roads to all existing factories were completed, together with road connecting Ambernath Station with the Kalyan Badliapur Road. Roads for staff bungalows and workmen's quarters have been finished. The existing sewage arrangements are by means of septic tanks but a small activated sludge plant has been installed as an experiment, and if successful, will probably be extended to deal with the sewage of the area. A market to serve the residents of the area has also been provided. The G. I. P. Railway are running a shuttle service between Kalyan and Badliapur.

and are remodelling Ambernath Station to deal with the traffic of the factories. An arterial siding for the factories is also being arranged by the Railway Company.

The water scheme is located at Badlapur 5 miles from Ambernath Station. The works comprise—(a) A barrage across the Ulhas River about 1½ miles from the railway station. (b) A set of Paterson rapid filters to filter three million gallons of water daily. (c) Protection wall for the Ulhas left bank.

The filtered water pumped by electric power transmitted from Ambernath to a reservoir on top of an adjoining hill commanding the factory area. The plant is designed for a supply of three million gallons per day, is capable of extension at a small cost to six million gallons per day. The reservoir has a capacity of about three million gallons. A proposal to supply the Kalyan Municipality and the village of Badlapur with filtered water from the scheme is under consideration.

A small power station supplies electric energy for running the permanent pumping plant at Badlapur and the factories in the area. The plant has been so laid out that it can easily be supplemented should further demands arise in the future.

Military Lands—Arrangements have been made with the Government of India involving the relinquishment by the military authorities of practically all the land they hold in the Fort area. The services displaced are to be reinstated partly at Deolali and partly at Colaba where the military area is to be increased by about 245 acres at the southern end of the Back Bay Reclamation. The Government of India have to pay the Government of Bombay for this land. The cost of new

buildings etc. due to the removal of the mill bary from the Fort is to be covered by the sale of the land to be vacated. A large area of land on the Palton Road Estate (formerly the old Palton Road Lines) has been sold to the Bombay Municipality. A few plots on the estate and another in Carnac Road have also been sold. The plots available for sale in the Mazagon Defence Yard site have all been sold while the small site known as the Old Saluting Battery site situated at Strand Street on the Harbour Face south of the Apollo Bunder was sold to the Port Trust for road widening. The old town barracks in the Fort have been sold to the Bombay Municipality in connection with its Hornby Road Ballard Pier Scheme. New Indian Infantry Lines at Carney Lines near Marine Lines. New Indian Infantry Lines at Deolali the temporary Mechanical Transport Depot at Colaba the married officers quarters at Colaba the Pilot Bunder flats at Colaba and the quarters for the General Officer Commanding Bombay District at Colaba. The new Explosives Depot at Trombay and the new building for Auxiliary Force Headquarters at Marine Lines have been completed. The Bombay Military Lands Scheme is in charge of a Board of Control consisting of the Secretary to Government Development Department and the General Officer Commanding Bombay District. The Audit and Accounts Officer Bombay Development Scheme is also Secretary Board of Control and Financial Adviser and Audit Officer for the Military Lands Scheme. The Staff employed on this scheme do not form part of the Development Department. As military land becomes ready for disposal it is handed over by the military authorities to the Bombay Government and action in regard to its disposal is taken by the Development Department of Government.

RECLAMATION INQUIRY AND REPORT

The progress of the Development scheme came under acute public discussion in 1924 and in particular the Reclamation of Back Bay. There were discussions in the Legislative Council and elsewhere and various committees set up by the Government of Bombay severely criticised the increase in the estimated cost, some indeed the whole financial basis of the Scheme. The Government of India therefore in its supreme capacity set up an over-riding Committee to inquire into the progress and future of the Reclamation.

Chairman—Sir Grimwood Mears, Chief Justice Allahabad High Court.

Members—Sir M. Visvesvaraya, K.C.I.E. D.S.O. M.I.C.E. Sir Frederick Thomas Hopkinson, K.B.E. M.I.C.E. and Mr. S. B. Billimoria, M.B.

Secretary—Mr. B. L. Furbank, C.I.E. I.C.S. The terms of reference of the Committee were—

Firstly to inquire into the history of the inception and conduct of the Back Bay Reclamation Scheme.

Secondly to make recommendations as regards future operations.

The Committee took evidence in India and in England and on December 1st signed a unanimous report which was issued early in 1927. The tenor of this is covered in the following official summary.

The object of the Back Bay Reclamation Scheme was to reclaim from the sea an area of 1,145 acres at an estimated outlay of about Rs. 7½ lakhs. Government were prepared to spend on the scheme up to Rs. 400 lakhs if necessary. A revised estimate for Rs. 70 lakhs was approved within two years of the original sanction and if the scheme is to be completed a second revision of the estimate will be necessary. The total cost will approximate to about 800 lakhs gross exclusive of interest charges. This total sum will be reduced by Rs. 2½ lakhs to be received from the Military authorities and any other subsequent receipts from sale of land. The programme of the reclamation which was to have been completed by 1928-27 has completely broken down. If it is continued under present conditions it cannot be finished for many years to come.

It is believed that land reclaimed cannot in the near future be sold at remunerative prices and care should be exercised not to reclaim land in advance of the demand. The work is being constructed from public loans on which interest and sinking fund charges have to be met and Government are faced with a growing debt.

The difficulties in which the scheme is at present involved arise from—

(1) the unsatisfactory character of the estimates.

- (2) defective organisation
- (3) the failure of the dredging operations and
- (4) the fall in land values

The defects in the various estimates would have been avoided if there had been sufficient and careful preliminary investigation. If an alternative comparative estimate for dry filling had been prepared at the outset and the cost of adequate dredging plant properly investigated, Government might have hesitated to commit themselves to the use of auction dredgers for this scheme. A dredging scheme costing Rs. 400 lakhs was an attractive financial proposition but it might very well be considered to have changed its character when the cost went up to 702 lakhs. Reclamation by dry filling if then practicable might have proved cheaper.

As regards the organisation and arrangements made for the conduct of the scheme, these in themselves were almost unworkable. A reading of clause 3 of the agreement between the Secretary of State in Council and the firm of Misk and Buchanan shows that responsibility was not clearly defined between the Engineers and the Director of Development. Much of the technical work was left to an overworked Chief Engineer or was not done at all. There was no costing system without which it was impossible properly to control expenditure.

Because nobody believed himself responsible for the due execution of the work, unwise decisions were taken and mistakes made such for instance as commencing the construction of the sea wall from both ends, delay in sealing the rubble mound, undertaking dredging operations in Back Bay without consideration of cost, absence of preconcerted programmes to regulate operations etc. All these militated against the success of the scheme and added to its cost.

The inability of the dredger to give the required output has been the chief cause of failure and has had a disastrous effect on the financial prospects of the scheme. The principal reason for the present serious position of the scheme was the ordering of the dredger on estimates and specifications put forward by Messrs. Simons and Company which were not examined with due care, the absence of proper guarantees for the sufficient output of the dredger and the acceptance of a quotation for a dredging plant without any real effort to secure competitive tenders.

The work having been undertaken in anticipation of realising large profits the scheme was subjected to very great criticism when a period of acute trade depression set in with a consequent fall in land values. The trade depression was not a matter which could have been foreseen although caution was necessary in undertaking a scheme of the magnitude at a time when world conditions were unstable. With the disappearance of the prospect of profits public criticism concentrated on the defects of the scheme.

The Future—With regard to future operations the following is a summary of the recommendations which we have made—

- (i) For financial reasons the completion of block 8 is a most urgent work.

- (ii) The foreshore portion along blocks 3, 4, 5 and 6 should be filled in to an average width

of 300 feet seaward of the present shore line and brought up to the ground level of the reclamation. The strip should curve at both ends so as to join on with block 2 at the northern end and block 7 at the southern end. This should be done as speedily as possible.

- (iii) The foreshore strip should be reclaimed with moorum filling.

- (iv) A complete lay-out of the area to be reclaimed should be prepared. The foreshore strip should be developed as soon as completed and blocks 1, 2 and 7 gradually as land is taken up.

The lay-out already prepared for the complete scheme (114½ acres) should be re-examined with the help of a committee and the lay-out of the area now recommended for reclamation should fit in with the lay-out approved for the complete reclamation if ultimately undertaken.

- (v) The Corporation of Bombay should share the cost of development and Government should arrive at an understanding with the Corporation on this point.

- (vi) The results of the work on the Sir George Lloyd and the Colaba during the current season should be verified. If the cost of filling by dredging approximates to that of moorum and the quality of the reclaimed land is satisfactory they might be used for blocks 1 and 2 after block 7 is completed. If not they should be disposed of. Notice should not be given to the staff until this point is decided.

- (vii) The reclamation should be removed from the control of the Development Directorate and carried out in accordance with one or other plans suggested in the report. A small committee including one or two experienced engineers should be constituted to advise Government on matters referred to them.

- (viii) The work should in future as far as possible be carried out by contract agency.

- (ix) Alternative estimates of the cost of the scheme now proposed are submitted. The extension of the 300-foot foreshore strip by additional strips of 400 feet and 300 feet as need arises is contemplated. Blocks 1 and 2, as being the most valuable in the whole project should be completed as soon as practicable. No part of them should be assigned for recreation purposes.

- (x) Detailed revised estimates should be prepared at once. The form of tender issued by the Development Directorate should be revised.

- (xi) Every endeavour should be made to complete the scheme proposed in three or four years. When a demand arises for completing the whole reclamation the work may be carried out by moorum filling exclusively.

Conclusions—Lord Lloyd left England charged by Mr. Montagu to take urgent steps to improve the housing conditions of Bombay. Whilst that did not necessarily imply the undertaking of a reclamation scheme, reclamation had nevertheless been considered for many years to be an integral part of any comprehensive scheme for the betterment of conditions. We are satisfied from the evidence that Mr. Montagu was deeply interested in the Reclamation and wished it to be carried through. We think that Lord Lloyd and the Government of Bombay were justified in accepting Sir George

Buchanan as an expert to report on Mr Kidd's scheme and that having taken the man recommended by the Government of India the proper and prudent course was to treat his opinion as final and authoritative.

Lord Lloyd's letter of 25th May 1919 shows conclusively that he had no predilection for a reclamation scheme and that he was prepared to abandon it at once had Sir George Buchanan reported adversely on it.

Though we are aware that a Governor must necessarily rely upon his advisers for the details of any particular scheme yet having regard to the personal interest displayed by Lord Lloyd as disclosed by his evidence and that of Sir George Buchanan we are surprised that his acute intelligence overlooked the apparent inadequacy of Sir George Buchanan's figures even though he held the belief that the 1911 figures of Mr Kidd were to some extent inflated. In the Report Sir George Buchanan himself gave 241.60 lakhs as the figure which he would have estimated in 1912 and on that basis the work could not have been done by him in 1919 for less than 605 lakhs.

To a lesser extent we are surprised that Lord Lloyd when reading Sir George Buchanan's report did not notice that Sir George Buchanan described the clay as hard whilst Messrs Simons & Co were putting forward an offer for a soft clay dredger.

We do not agree with Lord Lloyd that this was a technical point. The explanation may be a technical one but the discovery of the apparent contradiction between the character of the clay as described by Sir George Buchanan and Messrs Simons & Co needed no technical knowledge. It stood out on the document and was unless satisfactorily explained a contradiction in terms.

We are satisfied that Lord Lloyd acted throughout with the highest motives anxious only to make good his undertaking to Mr Montagu and to benefit the City of Bombay.

Sir George Curtis who is living at Dinard was too ill to attend. He has, however, furnished answers to certain questions which were sent to him. Although he was the Member in Charge during the inception of the scheme he has not been able at this distance of time to give us any information of value and he cannot enlighten us at all as to the reason why no one in the Government of Bombay queried the varying descriptions of clay or compared the estimates of Mr Kidd and Sir George Buchanan with reference to 1912 and 1919 prices.

The Estimates.—We cannot understand how Sir George Buchanan's figures found acceptance in Bombay and Delhi even with the addition of some 10 per cent. It was common knowledge that prices of plant material and labour when taken collectively had gone up at least 2½ times in the period between 1912 and 1919. The 1912 figure of Mr Kidd—22½ lakhs—had been accepted both by the Government of Bombay and the Government of India as a fair figure. If that was the belief then 367.61 lakhs was a manifest underestimate and proper scrutiny would infallibly have demonstrated it. When Sir George Buchanan was being questioned on these two sets of figures by the Committee and the rise in prices and the

inevitable inferences arising from them, he preferred not to answer the questions.

The failure of the Government of Bombay and the Government of India and in particular the failure of Sir Sidney Crookshank to notice the varying descriptions of clay contained in (a) Mr Kidd's Report (b) Sir George Buchanan's Report (c) Messrs Simons & Co's letter of 12th September 1919 and the 'general conditions' enclosed with that letter are regrettable.

The reports of Mr Kidd and of Sir George Buchanan were not studied with due and proper care by the Bombay Government and the Government of India respectively.

The Government of Bombay ought to have approached the Port Trust and the Royal Indian Marine for permission to dredge in the Harbour before deciding on dredging as the mode of reclamation.

We consider that Sir George Buchanan ought to have made far more extended and careful local investigations. These occupied him for less than a fortnight in May 1919.

He knew that the Port Trust had had difficulties with the dredgers Kalu and Jinga built by Messrs. Simons & Co. He ought to have made specific inquiries about this but he did not do so. Mr Messent the engineer to the Port Trust gave him at some time the pamphlet entitled 'Some results of the working of the Jinga and Kalu'. A table of figures in that document showed that the average of both vessels was 112½ cubic yards per hour as compared with 2,000 cubic yards per hour guaranteed and achieved on test. So little attention did Sir George Buchanan pay to this document that at first he said he had never seen it and knew nothing of the figures. A few days later he informed the Committee that he had found a copy of the document and that as it bore Mr Messent's initials he no doubt got it from him.

In his letter of 25th July 1919 to Messrs. Simons and Company he wanted your guarantee that the plant will do the work required. He did not get it. He wanted also a dredger with a minimum capacity of 2,000 cubic yards of clay per hour. He did not get it. On the contrary he ultimately accepted a specification in which these two most necessary stipulations were omitted.

Not having studied Mr Messent's publication he held the unfounded belief (which a careful reading of Mr Messent's document would have dissipated) that the results of the work of the Kalu and Jinga justified him in specifying the same output per hour on test for the Sir George Lloyd.

The Dredger.—Messrs. Simons and Company through their representative Mr McMurray were well aware that hard clay existed in Bombay Harbour. Partly for that reason they refused a test on site. They suggested a dredger designed for soft clay but gave no guarantee that it would do the required work or give a minimum output of 2,000 cubic yards per hour. In drafting their offer of 12th September 1919 we think they were more concerned in protecting themselves than in supplying a dredger fit for the known purpose for which it was going to be used. Accepting

Mr. McMurray's own account of the interviews of July and August 1919 we disapprove of his attitude and that of his firm. Sir George Buchanan accepted any conditions they made because he had the fixed belief that the harbour reclamation was in all respects the same problem as the Sewri and because of his erroneous belief in the capacity of the Kalu and Jhnga.

The capacity of the dredger was much too low and a guarantee of an output of soft clay at the rate of 2,000 cubic yards per hour on test meant infallibly an output under ordinary working conditions of much less. The position seems ultimately to have been appreciated by Sir George Buchanan who in his report of 15th December 1924 thought it

improbable with the class of material now being taken from the harbour that the Sir George Lloyd will do her estimated output of five million cubic yards per annum. In the same report he said "If we get two-thirds of the total output we shall be doing well."

Having regard to the great initial outlay and the need for speedy realisation the time within which the work would be completed was an element of the highest importance.

We are convinced that no crew, however skilful and diligent, ever can or will get any thing like five million cubic yards of material from the Harbour in any one season by the agency of the Sir George Lloyd. In a deep bed of soft clay they probably would get from time to time material at the rate of 2,000 cubic yards per hour. The first two reasons given by Mr. Halcrow in his report and set out in the body of this document are conclusive against the possibility of any continuous happening of this kind. The material on the average is too stiff the depth of material uncertain the bed of the sea uneven with upcropping rock, stones and moorum the capacity of the dredger too low.

Whilst we are of opinion that the Sir George Lloyd would under test conditions have delivered 2,000 cubic yards of soft clay per hour and therefore conformed to the building contract of we are of opinion that the Colaba did not do so and that she was structurally weak. In our view she ought to have been stiff enough to take any variation in load without sustaining damage by vibration.

In November 1919 Sir George Buchanan being in ignorance of the quality and characteristics of the silt or mud and clay in the harbour ought as a measure of prudence to have advised the Government of Bombay that no decision should be come to treat the reclamation as a dredging problem until check borings had been taken to ascertain the density, depth and resistance of the silt or mud and clay in various parts of the harbour and also that it was essential to ascertain by experiment whether the material obtained from the bed of the sea would dry out when deposited in an area under reclamation. Certainty on these points could have been arrived at by December, 1919 and the check borings were all the more necessary as Messrs. Simons had at this time definitely refused a test at Bombay.

With regard to the order of the dredger we consider Sir George Buchanan committed grave errors of judgment. The principal cause of

the failure of the dredging operations arose, in our opinion, from the fact that Sir George Buchanan did not take the trouble to ascertain the working records of the Kalu and Jhnga.

And believing that they had done extraordinarily good work was of opinion that vessels of a slightly increased horse-power of the same type would be adequate for the work. A most serious mistake in connection with the order of the dredger was the assumption that a machine capable of dredging 2,000 cubic yards on a short test would be capable of averaging that quantity during a whole season.

The Wall.—The building of the sea wall at both ends simultaneously was disastrous. Though the suggestion emanated from the Government of Bombay who must therefore take the greater part of the responsibility we are of opinion that Sir George Buchanan should have advised against it and resisted it, and should in the circumstances of the sale of Block 8 to the Military have prepared a programme for the building of the wall and the commencement of the Reclamation from the Colaba end only.

Moreover the building of the sea wall from both ends simultaneously prevented the continuance of the original and sensible plan which was to shut in an area as soon as possible and pump into it with the least possible delay.

We are quite unable to accept the theory set up by Sir George Buchanan that the phrases soft clay and stiff clay as used by him connoted the same density of material. Also we cannot accept his explanation that where he uses the words hard clay or closely compacted clay or other equivalent phrase he meant not that it was hard in its position in the harbour but that it was of a character which would become hard when pumped into the reclamation.

The firm of Messrs. Melk and Buchanan did not prepare proper programmes of work nor adhere to any fixed programme. The reason of their indecision with regard to the dredging was due partly to the limitation of area by the Port Trust and Royal Indian Marine (for which neither the firm nor Sir George Buchanan can be held accountable) but principally to the fact that having no certain belief in the quality of the material in the harbour, they were unable to formulate proper and precise future plans.

Sir George Buchanan did not realise that he was the expert to whom from first to last the Government looked for advice and assistance. He did not appreciate that when he found causes for complaint it was his duty to require them to be remedied and in virtue of his responsibility for supervision to see that they were remedied. In his evidence he ascribed to himself a position of no power weight or importance and he allowed his opinion to be disregarded. We think that this was an entire misconception of his position and he never ought to have allowed his advice to be set on one side. On such occasions as this happened he should at once have realised his duty to the Government of Bombay and assisted them by making the facts known to them, and we can have no doubt that Lord Lloyd and Sir Leslie Wilson would have welcomed information and would have given all help and encouragement.

to Sir George Buchanan in any effort made by him to advance the work.

Responsibility—The agreement of the 17th March 1921 between the firm of Molk and Buchanan and the Secretary of State for India in Council was an unhappily framed document. Clause 8 gave Sir Lawless Hepper the opportunity of saying that as the Resident Engineer had to carry out the details of the work in accordance with the firm's instructions that therefore the firm were responsible for the due execution of the works. On the other hand Sir George Buchanan naturally pointed to the sentence also in Clause 8 that the Resident Engineer should be subject to the control of the Director of Development. From this arose a mutual misunderstanding. Thus from the outset neither Sir George Buchanan nor Sir Lawless Hepper seemed to have a very clearly defined idea of their respective duties. Later when the disaster was threatening the enterprise each relied upon his interpretation of the agreement. Sir Lawless Hepper when giving evidence insisted before us that Sir George Buchanan was entirely responsible for the due execution of the works as if he were in fact a contractor who had undertaken them. On the other hand Sir George Buchanan contended that that responsibility lay with Sir Lawless Hepper pointing out that he it was who had control of the Resident Engineer and that his firm has no power of dismissal over any of the staff. On the strict construction of the agreement we incline to the opinion that Sir George Buchanan is right although there are statements of his to be found in his correspondence which would bear the interpretation that he did regard his firm as responsible for the actual carrying out of the works.

If the Government of Bombay intended to make Sir George Buchanan a firm responsible for the execution of the works nothing was easier than to say so in plain and simple words and as a necessary corollary to put the Resident Engineer entirely under the control of his firm including the power of appointment and the power of dismissal. The provision that the Government of Bombay should pay the Resident Engineer would not have detracted from a provision that the firm should be responsible for the due execution of the work nor from the legal position that the Resident Engineer would have been the servant and agent of Sir George Buchanan. In that way the position of Sir George Buchanan and Sir Lawless Hepper would have been perfectly clearly defined.

The reports of the Development Directorate drafted by Sir Lawless Hepper cannot be justified. They did not present a true picture of the progress of the work and concealed material circumstances.

We are of opinion that Sir Lawless Hepper had so much work in connection with the other Development Schemes that even if he had appreciated his responsibility for the execution of the works he could only have carried out that duty as regards the Reclamation by neglecting other duties relating to the other schemes.

Mr Lewis was not a specialist in sea works and dredging. Sir George Buchanan ought not to have nominated him. He was however,

greatly handicapped by the necessity of preparing a detailed project estimate and this so absorbed his energies that he was unable to devote himself fully to supervising and pushing on the work. Very shortly after he became Resident Engineer we are satisfied that he was in ill health which became manifest and disabled him in 1922. It is most regrettable that he was allowed (contrary to Sir George Buchanan's advice) to remain at his post till July 1924.

We are of opinion that Mr Elgee, Mr O'Rourke and Mr Speira have done their best on all occasions to promote the interests of the Reclamation and that the quarry, constructional and dredging staff have done their duty.

It has been put forward that the Reclamation of Back Bay would by providing more land in the business and residential area in some way relieve housing conditions of the poorer classes. That in our opinion is too remote for serious consideration but has Back Bay proved to be the financial success which was anticipated the advantage to all classes of persons in the City and throughout the Presidency would have been that there would have been available immense sums of money to be used for any purpose pleasing the Legislative Council. The consistent anticipation of profits had no doubt considerable weight in causing the reclamation of Back Bay to be accepted as an integral and necessary part of any comprehensive plan of development.

Action on the Report—Having regard to the recommendations made by the Marine Committee and in accordance with the wishes of the Legislative Council Government have decided for the present to continue future operations in connection with the Back Bay Reclamation Scheme to the reclamation and development of blocks Nos. 1, 2 and 7 and reclamation of block No. 8 (undveloped) with a marine drive along the existing foreshore connecting blocks 2 and 7. The area under reclamation has thus been reduced from 114½ to 55½ acres. A representative committee has also been constituted with a view to advise Government on all important matters connected with the reclamation. A layout plan in respect of the blocks which are proposed to be reclaimed has been prepared and is now before another committee specially appointed for the purpose. A revised detailed estimate in respect of the reduced scheme is also under preparation. The dredger "Kala" in conjunction with the intermediate pumping station "Jinga" will be commissioned to work in connection with block No. 1 from October 1927. The dredging on this block will be continued up to May 1928, and resumed in October 1928 if necessary. The entire work of murrum topping on block No. 8 has been given on contract and proposals for letting out the remaining work on contract basis is under consideration. At the request of the Military authorities, an area of about 24 acres in block No. 4 has been prepared in advance of the rest of the block and was handed over in 1927. The remaining portion of block No. 8 is expected to be transferred to them by May 1928 at the latest. The programme of reclamation, as at present contemplated is expected to be completed by 1931-1932.

The Indian Ports.

The administration of the affairs of the major ports (*Calcutta, Bombay, Madras, Karachi, Rangoon and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers but their proceedings are subject in a greater degree than those of municipal bodies to the control of Government. At all the ports the European members constitute the majority and the Board for Rangoon consists mainly of European members.

The income, expenditure and capital debt according to the latest figures obtainable from the Department of Commercial Intelligence and Statistics (India) of the six principal ports

managed by Trusts (Aden is excluded from the tables) are shown in the following table —

	Income	Expenditure	Capital Debt
	Rs	Rs	Rs
Calcutta	121 27 748	916 44 101	17 76 31 194
Bombay	2 97 27 130	2 90 16 84	22 60 68 406
Madras	351 481	30 89 982	1 41 14 721
Karachi	89 02 5	64 01 619	4 35 24 000
Rangoon	6 88 3	71 39 78	3 78 90 182
Chittagong	7 24 06	4 67 688	9 68 21 2

CALCUTTA

The Commissioners for the Port of Calcutta are as follows —

Appointed by Government —

Mr S C Stuart Williams M.L.C. Chairman

Mr T H Elderton Deputy Chairman and Secretary

Elected by the Bengal Chamber of Commerce —

Mr B J G Fuchs (Messrs Alexander Arbuthnot & Co.), Mr J Y Philip M.L.C. (Messrs Kilburn & Co.), Mr R B Wilson C.I.F. M.L.C. (Messrs Berkmyre Brothers), Mr H C Edmondson (Messrs Turner Morrison & Co.), Hon Mr J W A. Bell (Messrs Mackinnon Mackenzie & Co.), Mr J A Tassie (Messrs James Finlay & Co.)

Elected by the Calcutta Trades Association —
Mr J H Wiggett M.B.E. (Messrs T. B. Thomson & Co.)

Elected by the Bengal National Chamber of Commerce — Mr J G Banerjee, Raj A. Banerjee, Bahadur (Messrs Lehar Firebricks & Pottery Ltd.), Mr Nolini Ranjan Sarkar M.L.C. (The Hindustani Co-operative Insurance Society Ltd.)

Elected by the Indian Chamber of Commerce —
Mr D. A. Lulkar (The Sindia Steam Navigation Co. Ltd.)

Elected by the Municipal Corporation of Calcutta — Dr Naradina Nath Law M.A.B.L. P.R.S. P.L.D.

Nominated by Government — Mr L. Greenham (Agent Bengal Nagpur Railway), Mr G. L. Colvin C.B. C.M.G. D.S.O. (Agent, East Indian Rly), Mr N. Pearce (Agent, Eastern Bengal Rly), Mr G. S. Hardy I.C.S. (Collector of Customs) and Capt L. W. R. T. Turbett, R.N.

The principal officers of the Trust are —

Traffic Manager — Mr W. A. Burns

Chief Accountant — Mr N. G. Lark O.A.

Chief Engineer — Mr J. McGlashan M. Inst. C.E.

Deputy Conservator — Commander E. A. Constable R.N.

Medical Officer — Lt.-Col. H. B. Steen M.B.

Consulting Engineer and London Agent — Mr J. Angus M. Inst. C.E.

The traffic figures and the income of the Trust for the last thirteen years are as follows —

Year	Docks			Jetties	Nett tonnage of shipping entering the Port	Income
	General Export	Coal Export	Imports	Imports		
	Tons	Tons				Rs.
1914-15	922,659	2,823,305	700,133	917,978	3,714,344	1 44 50 349

The revenue of the Trust in 1926-27 amounted to Rs 2,78,72,330. The expenditure amounted to Rs 2,90,10,467. The result of the year's working was a deficit of Rs 11,47,082 which has been met from the Revenue Reserve Fund, the balance of which at the close of the year amounted to Rs 67,42,148. The aggregate capital expenditure during the year was Rs 1,80,491. The total debt of the Trust at the end of the year amounted to Rs 22,51,777.

The trade of the Port of Bombay during the last official year aggregated 245 crores in value.

The following statement shows the number of steam and square-rigged vessels which during recent years have entered the docks or been berthed at the harbour walls and paid dues.

excluding those which have remained for unloading and loading in the harbour stream —

Year	Number	Tonnage
1911-12	1,519	2,67,913
1912-13	1,566	2,92,006
1913-14	1,599	3,13,559
1914-15	1,880	4,41,035
1915-16	1,794	3,89,721
1916-17	2,112	5,03,522
1917-18	2,069	4,74,578
1918-19	2,058	4,52,846

1926-27	1,842	4,38,312

The two dry docks were occupied during the year 1926-27 by 177 vessels the total tonnage amounting to 625,808 tons which was less than the previous year by 88,170 tons.

KARACHI

The members of the Board of Trustees of the Port of Karachi are as follows —

Chairman — J B S Thubron CIE

Appointed by Government — H H Hood (Collector of Customs Karachi) A F Lockwood (Divisional Superintendent North Western Railway) Captain C H Peck DSO, MC, RA (DAQMG and Independent Brigade Area) Mr Ayub Khan Bar-at-Law

Elected by the Karachi Chamber of Commerce — H C Whitehouse (Traus & Co) E A Pearson (Forbes Forbes Campbell & Co Ltd) W M Petrie (Hall Brothers) J J Flockhart (Mackinnon Mackenzie & Co)

Elected by the Karachi Indian Merchants Association — Harchandral Vishindas CIE M.L.A. (Vice-Chairman) Isherdas A Mallik

Elected by the Buyers & Shippers Chamber — Jamshed N R Mehta, Haridas Lalji

Elected by the Karachi Municipality — Tikam Das Wadhmal, M A (Dixon) Bar-at-Law

The principal officers of the Trust are —

Secretary & Traffic Manager — T S Downie CBE

Port Officer — Capt J F Vibart CBE RIM

(Chief Assistant) — R A Inghet BA OA

(Chief Engineer) — W J Shepherd Barron M Inst CE

Deputy (Chief Engineer) — H A L French M Inst CE

(Chief Storekeeper) — Vacant

The Revenue receipts and expenditure of the Port of Karachi for the year 1926-27 were as under —

Revenue receipts (excluding the Port Fund Account) Rs 60,12,430 Revenue Expenditure Rs 58,91,621 Surplus Rs 2,20,809 Reserve Fund Rs 45,20,500

The number of vessels which entered the Port during the year 1926-27 exclusive of vessels put back and fishing boats was 3,023 with a tonnage of 2,842,713 against 3,265 with a tonnage of 2,842,461 in 1925-26. 880 steamers of all kinds entered the Port with a tonnage of 2,256,969 against 868 and 2,209,406 respectively in the previous year. Of the above 880 were of British nationality.

Imports including coal landed at the ship wharves during the year totalled 600,805 tons against 607,448 in the previous year. Total shipments from the ship wharves were 590,118 tons in 1926-27 against 678,089 tons in 1925-26.

MADRAS

The following gentlemen are the Trustees of the Port of Madras —

Officials — Sir Bradford Leslie Kt CBE M Inst CE M.I.E.E. (Chairman and Chief Engineer) T A Stewart JCS (Collector of Customs) and Capt C B Campbell DSO MVO RIM, (Presidency Port Officer)

Non-Officials — (1) Nominated by Government — A A Biggs M Inst CE P Rothera CBE (2) Representing Chamber of Commerce Madras — H F P Pearson R D Denniston, G W Chambers Sir James Simpson Kt (3) Representing Southern India Chamber of Commerce Madras — M R Ry Diwan Bahadur Govindoo Chathoorboodoo Caru, V Venkateswara Sastrulu Garu (4) Representing Madras Trades Association — J Mackenzie Smith F G Luker (5) Representing Southern India Ship and Hide Merchants Association — M Mohamed Ismail Sahib Bahadur Representing Madras Peacocks Merchants Association — M R Ry Bahadur Sahib B Papayya Chetty Garu

Principal Officers are — Dy Chief Engineer W Fife M Inst CE M Inst E Mechanical Engineer T W Muir Assistant Mechanical Engineer S W White Assistant Engineer M Nagabhushanam Executive Engineer M R P Rao Bahadur K Ganapati Kudwa Avargal, BA BOM Assistant Engineer M R Ry V Dayawanda Kamath Avargal BA BOM Traffic Manager J G Lord Assistant Traffic Managers F W Stooke and James Channer Chief Accountant, S Narayana Iyer MA Manager and Accountant M P Ry Bahadur Sahib B Beshayya Avargal Office Manager J L Pluto

The receipts during the year of the Port Trust in Revenue account from all sources were Rs 87,39,864 as against Rs 12,561 in 1925-26 and the gross expenditure out of revenue was Rs 83,08,074. During the year 795 vessels with an aggregate tonnage of 2,609,955 tons called at the port against last year's figure of 770 vessels of 2,462,297 tons.

RANGOON

The personnel of the Commissioners for the Port of Rangoon is comprised of seventeen members—

Appointed by Government—Mr J A Cherry C.I.F. (Chairman), Captain C R Goad R.N.M. (Principal Port Officer), Messrs W Keay and W T Henry M.L.C.

Ex-officio—Messrs A E Boyd (Collector of Customs), J E Houlday B.A. L.S. M.L.C. (Chairman Rangoon Development Trust) and J R D Glasfitt C.I.F. M.L.C. (Agent Burma Railways).

Elected by the Burma Chamber of Commerce—Messrs J R Turner (Vice Chairman), C Woodhouse, R B Howison and A F Donaldson.

Elected by the Rangoon Trades Association—Mr J F Gibson.

Elected by the Chinese Chamber of Commerce—Khang Peng Chons M.L.C.

Elected by the Burma Indian Chamber of Commerce—Messrs Ranchordas H Gandhi and A Chandoo.

Elected by the Small Vessel Owners Association—U Thwin.

Elected by the Rangoon Municipal Corporation—U Ba Pe M.L.C.

Principal officers are—

Secretary—Mr H Leonard.

Chief Accountant—Mr D H James A.C.A.

Chief Engineer—Mr E C Mervin M.I.E.E.

Deputy Conservator—Mr H N Gilbert.

Traffic Manager—Mr H Cooper.

The receipts and expenditure on revenue account for the Port of Rangoon in 1926-27 were—

Receipts Rs 79,84,162

Expenditure Rs 76,89,552

The capital debt of the Port at the end of the year was Rs 4,74,000. The balance (including in statements at cost) at the credit of the different sinking funds on 31st March 1927 was Rs 1,48,917.

The total sea borne trade of Rangoon during the year 1926-27 was 4,984,344 tons of which 1,474,773 tons were imports, 3,01 ton exports and 1,484 tons transshipment. The tonnage of goods passed over the Commisshours premises during the year amounted to 3,142,443 tons. The total number of steamers (excluding Government vessels) entering the Port was 1,448 with a total net registered tonnage of 7,412,564 being a decrease of 6 steamers and 30,730 tons in net tonnage below that of 1925-26.

CHITTAGONG

Chittagong in Eastern Bengal lying on the right bank of the river Karnaphuli at a distance of 12 miles from the sea, was already an important port in the sixteenth century when the Portuguese gave it the name of Porto Grande.

The construction of the Assam Bengal Railway has facilitated the transport of trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet.

The chief exports are tea and jute and imports—piece goods, salt, oil and machinery.

FOREIGN TRADE 1926-27 Rs (in lakhs)

Imports 164.22

Exports 774.48

COASTING TRADE 1926-27 Rs (in lakhs)

Imports 341.16

Exports 137.06

Port Commissioners—M C McAlpin C.I.F. is Chairman, G H W Davis, I.C.S. Vice Chairman, R J Bliss V.D. M.E. Chairman, B A F C Gray, A R Lalsham V.D. Rai Upendra Lal Ray Bahadur B.L. Moulvi Abdul Haq Dubash.

Port Officer and Secretary to the Port Commissioners—Commander C R Bluet R.N.M.

Port Engineer—F J Green B.Sc. A.M.I.C.E. &c.

Vessels of 25 feet draught can be accommodated during the greater part of the year at four jetties which are fitted with modern equipment and capable of quick despatch.

VIZAGAPATAM HARBOUR PROJECT

The question of creating a harbour at Vizagapatam to supply an outlet for a large area of fertile country adjacent to the East Coast of India hitherto undeveloped with considerable mineral resources and without suitable access to the outside world was first formulated by the Bengal Nagpur Railway Company. That the creation of such a port would have a beneficial influence on this area was unquestioned for it is pointed out that Vizagapatam lying as it does in front of the only practicable gap in the barrier of the Eastern Ghats is formed by nature to be the outlet of the Central Provinces from which a considerable amount of trade has taken this route in the past even with the imperfect communications hitherto available. A necessary complement of the scheme is the construction of the proposed railway from Parvatipuram to Balpur

which with the existing coast line of the Bengal Nagpur Railway would make a large and rich area tributary to the proposed port and obviate the long and expensive circuit by Calcutta. A link would also be supplied in the most direct route to Panaroon from Europe by way of Bombay while from an imperial point of view the possible provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. The lofty projecting head land of the Dolphin's Nose would fit it pointed out offer facilities for this purpose as well as for protecting the entrance to the Port from the effects of south and south westerly gales.

The Government of India have with the approval of the Secretary of State and the

Legislative Assembly sanctioned the construction of the new railway line from Raipur to Parvaidpur and the work is in progress. They have also decided to develop the port of Vizagapatam under their direct control and the port has accordingly been declared to be a major port.

The scheme for the construction and development of the Harbour will be carried out in sections. At present the first section only has been sanctioned and consists of a wharf 1,500 feet long capable of taking 3 or 4 steamers according to their length with moorings for two vessels in the harbour plus accommodation at the oil jetty for 1 oil tanker or oil burning steamer. The wharf will afford a depth of 30 feet below low water ordinary spring tides and the entrance channel through the creek to the harbour will also be dredged to the same depth. In the first section also goods facilities are provided for in the form of a large transit shed with some 1,000 square feet of floor space with necessary allway sidings and electric cranes and passenger traffic is provided for by means of a dharmasala, a waiting room and the necessary customs examination sheds. On the south side of the creek away from the Harbour an oil depot is also to be established where oil tankers can come alongside to fill storage tanks in the depot.

The estimated cost of the first section is Rs. 19½ lakhs, approximately and the time required to complete this will depend on the period that the dredging and reclamation work will take but it is anticipated that it will be

possible to berth ships in the new harbour in about 4 years time.

The work is being carried out by a staff of Engineers under the direct charge of an Engineer in Chief who comes under the administrative charge of the Agent Bengal Nagpur Railway who is *ex-officio* administrative officer for the development scheme. An advisory committee consisting of the above mentioned officers and representatives of the Local Government, the Vizagapatam Port Administration and the commercial interests concerned has also been constituted to advise in the development of the Harbour.

Good progress has been made with the initial portion of the development scheme. Most of the land has been acquired. A marine survey to investigate the sand travel and formation of the bar has been completed. Detailed designs have been prepared for the wharf wall etc. and preliminary work on the quay wall has been taken in hand. Schemes for sewage and town planning have been prepared in consultation with the municipality and a malaria survey of the suburban area has been completed. Arrangements have also been made with the municipality for the supply of water to the Harbour area during construction.

A rock breaker and dipper have been obtained and employed on dredging work with satisfactory results. A suction dredger was also delivered at Vizagapatam towards the end of the year 1928-29.

Education

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which while to one it will appear as a blunder based on an initial error easily avoidable to another it stands out as a symbol of sincerity and honest endeavour on the part of a far sighted race of rulers whose aim has been to guide a people alien in sentiments and prejudices into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. Government local bodies and private persons of learning have in the past devoted their limited funds to meeting the demands of those who perceived the benefits of education rather than to cultivating a desire for education where it did not exist. The result is that the structure has become top-heavy. The lower classes are largely illiterate while the middle classes who constitute the bulk of the *middle classes* are in point of numbers at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has eventually assumed contains corresponding defects. There have however in recent years been strong movements leading to the passing of Primary Education Acts in several Provinces in favour of the expansion of primary education among the masses.

The Introduction of Western Learning
—In the early days of its dominion in India the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government and to interfere as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lakh of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Sanskrit and Arabic. In the following year the Court of Directors instructed the Governor General to leave the Hindus to the practice of usage long established among them, of giving instruction in their own homes and to encourage them in the exercise and cultivation of their talents by the stimulus of honorary marks of distinction and in some cases by grants of pecuniary assistance.

It was from sources other than Government that the desire for western knowledge arose in India. In 1816, David Hare an English watchmaker in Calcutta joined hands with the enlightened Brahmin Mohan Roy to institute the Hindu College for the promotion of western secular learning. The new institution was distrusted both by Christian missionaries and by orthodox Hindus but its influence grew apace. Fifteen years later the Committee of Public Instruction in Bengal reported

that a taste for English had been widely disseminated and that independent schools conducted by young men reared in the Hindu College were springing up in every direction. In Bombay the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach the principles and practice of medical science in strict accordance with the mode adopted in Europe. Many pronounced the failure of the undertaking to be inevitable for under the Hind custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madhusudan Gupta who, with a few courageous pupils, began the dissection of a human body. From that time onward Indians of the highest castes have devoted themselves with enthusiasm and with success to the study of medicine in all its branches.

Another impetus to the introduction of western learning was the devotion of Christian missionaries. The humanitarian spirit, which had been kindled in England by Wesley Lurke and Wilberforce influenced action also in India. Carey Marshman and Ward opened the first missionary College at Serampore in 1818 and twelve years later Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching and by the foundation of his school and College in Calcutta. In Madras, the missionaries had been still earlier in the field for as early as in 1787 a small group of missionary schools were being directed by Mr Schwarz. The Madras Christian College was opened in 1837. In Bombay the Wilson School (afterwards College) was founded in 1834.

Lord W. Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks the somewhat tardy acceptance by Government of the new policy. Government then determined while observing a neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of western learning to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected still less that the development of the vernaculars should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the press was established in 1835. English was substituted for Persian as the language of the Courts in 1837 and in 1841 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India and though the Muhammadans still held aloof the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need of improving the instructional level of their co-religionists and in many of the provinces of India a great impulse towards educational advance among the Muhammadan community is now noticeable.

Statement of Educational Progress in British India

* High schools include vernacular high schools also. In some provinces the figure for 1922-23 are not strictly comparable with those of the preceding years. † Title excludes expenditure on European Education in the United Provinces, Assam and the North West Frontier Province. The total expenditure actually amounted to Rs 19,04,04,036.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country. For this purpose Departments of Public Instructions were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835 whereby most of the available public funds had been expended upon a few Government schools and colleges and instituted a policy of grants-in-aid to private institutions.

Such a system as this placed in all its degrees under efficient inspection. Beginning from the humblest elementary institution and ending with the university test of a liberal education would impart life and energy to education in India and lead to a gradual but steady extension of its benefits to all classes of people. Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affixing type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis. It did much through the agency of its Colleges to develop backward places. It accelerated the conversion of Indians to a zeal for western education and it cost little at a time when money was scarce. On the other hand the new universities were not corporations of scholars, but corporations of administrators. They did not deal directly with the training of men but with the examination of candidates. They were not concerned with learning except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses. Their teachers were denied that freedom which teachers should enjoy and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests as such, should become the sole tests qualifying for public posts, they also recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions; they recommended the establishment of university chairs for advanced study. They were aware of the dangers of a too literary course of instruction. They hoped that the system of education would rouse the people of India to develop the vast resources of their country and gradually but certainly confer upon them all the advantages which accompany the healthy increase of wealth and commerce. The encouragement of the grant-in-aid system was

advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government at within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time an unworkable system of dual control grew up whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions. There can be little wonder that under such a system of neglect and short-sightedness evils crept in which are now being removed gradually by the establishment of independent Boards of Intermediate Education charged with the administration of the high school and intermediate stages of education.

The Reforms of 1902

In 1902, the Universities Commission was appointed by Lord Curzon's Government and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities and on the part of the universities over the schools and colleges. The Chancellors of the Universities were empowered to nominate 80 per cent of the ordinary members of the Senates and to approve the election of the remainder. The Government retained the power of cancelling an appointment and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments subject to Government sanction for these objects but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined so that universities were precluded from any connexion with institutions lying outside those boundaries. Neither the Commission nor the Government dismissed the fundamental problems of university organisation but dealt only with the immediate difficulties of the Indian system. They did not inquire whether the affiliating system could be replaced by any other mode of organisation, nor whether all schools might be placed under some public authority which would be representative of the universities and of the departments. They assumed the permanent validity of the existing system, its main features, and set themselves only to improve and to strengthen it.

Recent Developments

Since the passing of the Universities Act of 1904 there has been a considerable expansion of the educational system. The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India.

(a) STUDENTS

Year	In Recognized Institutions			In All Institutions (Recognized and Unrecognized)		
	Males	Girls	Total	Males	Girls	Total

1925-26	14 14 96 311	22 77 92 532

In 1925-26 the total expenditure on education in British India amounted to Rs. 22,77,92,632 of which 4.8 per cent came from Government funds, 14.3 per cent from Board funds, 21.6 per cent from fees and 16.3 per cent from other sources. In spite of this marked advance there is much less way to make up, as in the last census report the literate population of India was only 72 per thousand males and females per thousand 18

and valuable comment on the state of education in India. Although the statistical returns show more than 8 millions of pupils at school it will be seen that over 78 per cent of those are in the lower primary stage and it may be safely deducted that over 60 per cent of those at school never become literate. Of course the total number of pupils at school is not a safe criterion of the state of education and a sounder standard of comparison would be that number multiplied by the average period spent at school.

The following table provides an interesting

CLASSIFICATION OF PUPILS BY AGE AND STAGES OF INSTRUCTION IN 1921-22

* Revised figures.

Primary Education—The primary schools are mainly under the direction of the local boards and municipalities. In 1911 the late Mr G K Gokhale pleaded in the Imperial Legislative Council for a modified system of compulsory primary education but Government was unable to accept the proposal mainly for financial reasons. In recent years eight provincial legislatures have passed Primary Education Acts authorising the introduction of compulsory education by local option. Bombay led the way in this matter by a private Bill which was passed into law in February 1918. The other private Bills which followed were those of Bihar and Orissa passed in February 1918 of Bengal passed in May 1919 and of the United Provinces passed in June 1919. Of the Government measures the Punjab Act was passed in April 1919, the Central Provinces Act in May 1920, the Madras Act in December 1920 and the Assam Act in 1925. The City of Bombay Primary Education Act of 1920 extends generally the provisions of the 1918 Act to the Bombay Corporation also enabling it to introduce free compulsory education ward by ward. Not content with this the Bombay legislature passed a new Act in 1923 to provide for compulsory elementary education and to make better provision for the management and control of primary education in the Bombay Presidency. The Bombay and the United Provinces Acts apply only to municipalities the Bengal Primary Education Act applies in the first instance to municipalities but is capable of extension to rural areas. Bombay is included within the scope of the Punjab Bihar and Orissa and Bengal Acts

while the Central Provinces Act is capable of extension to girls and the remaining Acts are applicable to both sexes. The United Provinces legislature passed a second Primary Education Act in 1926 and the United Provinces District Boards Primary Education Act. It allows the District Boards to introduce compulsion within their areas. All the Acts are drafted on very similar lines. If a local body at a special meeting convened for the purpose decides by a two-thirds majority in favour of the introduction of compulsion in any part of the area under its control it may then submit to Government for approval a scheme to give effect to its decision. The scheme must be within the means of the local body to carry out with reasonable financial assistance from Government. Ordinarily the age limits of compulsion are from six to ten years though provision is made for prolonging the period. Provision is also made in all the Acts for the exemption of particular classes and communities and for special exemption from attendance in cases of bodily infirmity. Walking distance to a school is generally defined as one mile from the child's home. The employment of children, who should be at school is strictly forbidden and a small fine is imposed for non compliance with an attendance order. The Acts generally provide that subject to the sanction of the local Government education where compulsory shall be free. Such in brief are the ordinary provisions of the various provincial Education Acts. Local bodies have not however shown as yet any great alacrity in availing themselves of the opportunity afforded them by these Acts as is testified by the following table —

Province	Date of Act	AREAS UNDER COMPULSION *	
		Municipalities and Urban Areas	District Boards and Rural Areas
1 Bombay	February 1918 (For the City of Bombay only) 1920		
2 Bihar and Orissa	February 1919	1	2
3 Punjab	April 1919	42	451
4 Bengal	May 1919		
5 United Provinces	June 1919 & 1926	23	
6 Central Provinces	May 1920	3	65
7 Madras	December 1920	20	4
8 Delhi	(Punjab Act applied) 1925	In certain wards of the Delhi Municipality	

N.B.—The above table does not include areas for which schemes of compulsory primary education are under consideration or have been sanctioned but not yet introduced. It includes, on the other hand, areas in which such schemes have been partially introduced.

* Individual school areas.

(1) Provincial subsidies to District Boards and Municipalities were Rs. 84,613-4 and Rs. 4,31,880 respectively.

* Includes intermediate and 2nd grade colleges of the m. t. p. e.

The poverty of local bodies is usually the cause assigned to their diffidence to introduce compulsory education to any appreciable extent.

On the 31st March 1926 there were 183,164 recognised primary schools in British India containing 7,799,076 scholars. (The latter figure does not include scholars reading in the primary classes of secondary schools.) The total direct expenditure on primary schools during the year 1925-26 amounted to Rs. 835,58,298.

Secondary and High School Education

—The policy of Government is to maintain a small number of high schools which are to be regarded as models for private enterprise and to aid private institutions. In 1911-12 there were 1,219 high schools for boys in India and in 1925-26 the number had risen to 2,896; the number of scholars in the former year being 390,881 and in the latter year 714,655. Some attempts have been made to give a greater bias towards a more practical form of instruction in these schools. The Commission of 1882 suggested that there should be two sides in secondary schools, one leading to the entrance examination of the universities, the other of a more practical character. Intended to fit youths for commercial and other non-literary pursuits. Some years later what were called B and C classes were started in some schools in Bengal but as they did not lead to a university course, they have not been successful. In more recent years the Government of India have advocated the institution of a school final examination in which the more practical subjects may be included. Efforts have also been made to improve the conduct of the matriculation and to emphasise the importance of oral tests and of school records. In Madras this examination which was placed under the direction of a Board representative of the University and of Government proved somewhat cumbersome and certain modifications were made in the United Provinces and the Central Provinces the control of secondary education has been made over to special Boards created for this purpose. Similarly the Administration of Delhi has established a Board of Secondary Education for that province. In the Punjab and in Bombay the school leaving examination is conducted by Boards. But the main difficulty has not yet been touched. The University which recognises the schools has no money wherewith to improve them and the Department of Public Instruction which allots the Government grants has no responsibility for the recognition of schools and no connexion whatever with the private unaided schools. This dual authority and this division of responsibility have had unhappy effects. The standard of the schools also is very low so that the matriculates are often unable to benefit by the college courses. In some provinces an endeavour has been made to raise the standard of the schools by withdrawing from the University the intermediate classes and by placing them in a number of the better schools in the State.

There are schools for Europeans and Anglo-Indians which are placed under the control of special inspectors for European Schools. The education of the domiciled community has proved to be a perplexing problem, and in 1912 a

conference was summoned at Simla to consider the matter. The difficulty is that European Schools are very remote from the general system of education in India.

Medium of instruction in public schools

—The position of English as a foreign language and as a medium of instruction in public schools was discussed by a representative conference which met at Simla in 1917 under the Chairmanship of Sir Sankaran Nair, the then Education Member. Although it was generally conceded that the teaching of school subjects through a medium which was imperfectly understood led to cramming and memorising of text books, the use of English medium was defended by some on the ground that it improved the knowledge of English. The result of the conference was therefore inconclusive. Some local authorities have since then approved of a scheme providing for the recognition of local vernaculars as media of instruction and examination in certain subjects.

Boy Scout Movement—A happy development in recent years has been the spread of the boy scout movement in public schools.

Medical Inspection—Arrangements have been made for medical inspection of scholars.

Intermediate Colleges—One important part of the Calcutta University Commission's recommendations has been accepted by the Government of the United Provinces and the Government of India and incorporated in the Acts establishing the Lucknow Darca and Aligarh Muslim Universities and reconstituting that of Allahabad, namely the separation of the intermediate classes from the sphere of university work and of the two top classes of high schools from the rest of the school classes. The separated classes have been combined together and the control over them has been transferred from the University to a Board of Secondary and Intermediate Education. Such a Board was constituted for the Dacca University area by a notification of the Government of Bengal in 1921. It contains twenty-two members of whom seven are elected by the University. The United Provinces Board was constituted by an Act passed in the same year. It consists of some forty members of whom approximately one-quarter represent the universities in the Province. The Intermediate Examination Board of the Aligarh Muslim University was brought into existence by an Ordinance framed in 1921. It is composed of eight members.

Professional and Technical Education

—There are 40 Medical Colleges and schools with 9,116 students, 14 Law Colleges and schools with 8,355 students and twenty Agricultural Colleges and schools containing 1,094 students. A research institute in agriculture was started by Lord Curzon at Pusa in Bihar which has done valuable work. Conferences have been held at Pusa, Simla and Poona with the object of providing a suitable training in agriculture. There are twenty-one training colleges for secondary teachers in various parts of India with about 1,094 scholars and normal schools for the training of vernacular teachers. There are 158 commercial

colleges and schools with 8 257 scholars. The most important among them is the Sydenham College of Commerce in Bombay. Industrial institutions are dotted about India some maintained by Government others by municipalities or local boards and others by private bodies. The most important are the Victoria Jubilee Technical Institute in Bombay The Indian Institute of Science at Bangalore the product of generous donations by the Tata family. The tendency in recent years has been to place these institutions under the control of the Departments of Industries. In addition to a number of engineering schools there are Engineering Colleges at Roorkee Sibpur Poona, Madras Rangoon Patna and Benares each of

which except that at Roorkee is affiliated to a university. There are also a number of engineering schools. They had 3 482 scholars on their rolls on the 31st March 1926. The engineering colleges maintain a high standard and great pressure for admission is reported from several provinces. There are schools of art in the larger towns where not only architecture and the fine arts are studied but also practical crafts like pottery and iron work. There are two forest colleges at Dehra Dun and Coimbatore with 119 scholars in all. A Technical Institute is in existence at Cawnpore and a Mining school at Dhanbad there are three colleges for veterinary training containing 272 students.

Universities

There are sixteen universities in India namely :—

No.	University	Dates of Acts	Territorial jurisdiction
1	CALCUTTA	1857, 1904, 1905 & 1921	Bengal and Assam and certain adjacent Indian States
2	MADRAS	1867 1904 1905 and 1923	The Presidency of Madras excluding the Telugu country and Coorg and certain Indian States.
3	BOMBAY	1857 1904 & 1905	The Presidency of Bombay and certain Indian States (Baroda, &c.)
4	PUNJAB	1882 1904 & 1905	The Punjab the North-West Frontier Province Baluchistan and adjacent Indian States (Kashmir Patiala &c.)
5	ALLAHABAD	1887, 1904 1905 and 1921	The United Provinces Ajmere, Mewara and adjacent States
6	BENARES HINDU	Oct 1915	Benares District
7	MYSORE	July 1916	Mysore State
8	PATNA	Sept 1917 and 1923	Bihar & Orissa and adjacent Indian States
9	ORMISSA	1918	Hyderabad
10	DACC	April 1920	Radius of 5 miles
11	ALIGARH MUSLIM	Sept 1920	Radius of 10 miles.
12	RANGOON	Oct 1920 and 1921	Burma.
13	LUCKNOW	Nov 1920	Local
14	DELHI	March 1922	Delhi
15	NAAGPUR	June 1923	The Central Provinces and Berar
16	ANDHRA *	Jan 1923	The Telugu Country of the Madras Presidency

* Actually established after 1920 26

The foregoing statement mentions the universities incorporated by law for the time being in force. The first University in India that of Calcutta was founded in 1857. Between 1857 and 1887 four new Universities at Bombay Madras Lahore and Allahabad were added. These five universities were all of the affiliating type. They consisted of groups of colleges situated sometimes several hundred miles apart

and bound together by a legally constituted central organisation which determined the qualifications for admission prescribed the courses of study conducted the examinations and exercised a mild form of control over the affiliated colleges. There was nothing under the system to limit the number of institutions affiliated to a University and for thirty years i.e. from 1887 to 1917, the growing demand for

university education was met not by the creation of new universities but by enlarging the size of the constituent college and by increasing their number. By 1917 this inflation had been carried on so far that the composition of the original five universities stood as follows —

University	Colleges	Scholars
Calcutta	58	18 618
Bombay	17	8 001
Madras	53	10 216
Punjab	24	6 558
Allahabad	38	7 807

It had become obvious that further expansion on the same lines was no longer possible without a serious loss of efficiency and the Government of India had recognised in their resolution of 1913 the necessity of creating new local teaching and residential universities in addition to the existing affiliating universities. The development of this policy was accelerated by the strength of communal feeling and the growth of local and provincial patriotism leading to the establishment of a number of teaching universities. The new type of universities has since been strongly advocated by the Calcutta University Commission which has offered constructive proposals as to the lines to be followed in university reform. A detailed account of the old and new Universities is given below.

The Universities of Calcutta, Bombay and the Punjab—These three Universities alone still retain their old form as measures for their reorganisation are still under consideration. On the 27th March 1911 an amending Act was passed by which the Governor General ceased to be the Chancellor of the Calcutta University and now the head of the provincial government is the Chancellor of each of the older universities. The Vice Chancellor is nominated by the Government concerned. The executive body is the Syndicate which is now organised so as to include a larger educational element. Over this body the Vice-Chancellor presides, all other members being elected by the Faculties except the Director of Public Instruction who is a member *ex-officio*. The secretarial work is under the direction of the Registrar. The legislative body is the Senate which consists of from 75 to 100 members 80 per cent of whom are nominated by the Chancellor the rest being elected by the Senate or by its Faculties or by the body of registered graduates. The Senate is divided into Faculties which are in most cases those of Arts, Science, Law, Medicine, and Engineering. There is an oriental faculty in the Punjab University alone. There are also Boards of Studies whose duties are to recommend textbooks or books which represent the standard of knowledge required in the various examinations. The newer universities differ considerably from the older universities in constitution.

Apart from the general tightening up of university control over its colleges, the chief feature

of university development since the passing of the Act of 1904 has been participation by the universities in post-graduate teaching and research. In Madras a small number of university professors have been appointed in the Punjab the services of a certain number of temporary professors from overseas have been engaged. In Bombay a certain number of college professors and others have delivered lectures to post graduate students under the auspices of the University. But the most notable advance has been made in Calcutta owing to the energy of the late Sir Asutosh Mookerjee and to the liberality of Sir Tarak Nath Talit and of Sir Raah Bihari Ghosh. In 1918 a committee was appointed to investigate the matter in accordance with its report new regulations have been passed by the Senate whereby all post graduate teaching and research in Arts and Science in Calcutta is now conducted directly by the University though many of the college teachers have been invited to take part in the work. Post-graduate councils in Arts and Science have also been constituted which comprised all the teachers engaged in the work and a very small number of additional numbers appointed by the Senate.

The University of Madras—This is one of the older universities. It has recently been reconstituted the reconstituted University while functioning as teaching and residential University in so far as the city of Madras is concerned continues to exercise its jurisdiction over its affiliated colleges which remain affiliated to it. The administration of the University is in the hands of a Senate which has been so constituted as to include both those who are educationists and those who are connected with the actual business and commercial life. A large elective element has been introduced in its composition Government control over the details of administration has been decentralised. The affairs of the University are managed by the Senate through a body called the Syndicate while the Academic Council another new body has charge of the academic matters. The affiliated colleges have been entrusted to the care of a new organisation called the Council of Affiliated Colleges. In accordance with the recommendations of the Calcutta University Commission the Intermediate Examination (certificate) has been made the admission test to the courses of the University. The Governor General of India has been associated with the University as its Visitor with certain emergency powers. The Governor of Madras continues a Chancellor. The Vice Chancellor is an elected whole time officer.

The University of Allahabad—This is another old University which has undergone reorganisation. In 1911 an Act was passed with a view to establishing a unitary teaching and residential University at Allahabad while enabling the University to continue to exercise due control over the quality and character of the teaching given in its name by colleges affiliated to the University at Allahabad. The Governor-General is Visitor and the Governor of the United Provinces Chancellor. The Vice Chancellor is a whole-time officer. There is a Court, an Executive Council, an Academic Council, a Committee of References dealing with expenditure only, a Council of Associated Colleges &c.

The Mysore University was constituted under Regulation V of 1916 for the better encouragement and organisation of education in the State. His Highness the Maharaja is the Chancellor. The University is very similar in its constitution to the older Indian universities, having a Senate of not less than fifty and not more than sixty members but, unlike the older universities it gives seats on the Senate to the university professors *ex-officio*. It departs from existing practice by centralising university instruction in Mysore and Bangalore and by conducting the work of the first year of the old college course in a few specially selected high schools. This University has been recognised by the Government of India as a University incorporated by law for the time being in force that is to say its examinations and degrees have been accorded the status of the corresponding examinations and degrees of a University established by law in British India.

The Patna University—Much thought has also been given to the evolution of a new type of university which will run abreast of the old Patna university which was constituted in 1917. In most of its features a university of the old type but certain innovations have been made. The Chancellor who is the Governor of the province may annul any proceeding of the University which is not in conformity with the Act and the Regulations. In the Senate the application of the elective principle has been extended by increasing both the proportion of the elected Fellows and the categories of electing bodies and the Senate includes representatives of the teaching staff and of the graduate teachers of recognised schools. Further all colleges are given statutory representation on the Senate in the persons of their principals. The Syndicate is the ultimate authority in academic matters subject to the proviso that any six of its members have the power to refer such matters to the Senate for review. The Vice-Chancellor is appointed by the local Government. In addition to other duties, he has the power to inspect all colleges of the University. The colleges affiliated to the University are of two kinds: colleges of the University whose buildings are situated within a specified area, and external colleges whose buildings are situated in one of the four following towns: Munshiganj, Bhagalpur, Onitack and Hazaribagh.

The Osmania University Hyderabad—The Osmania University was established under a Charter promulgated with a *Nizam* of His Exalted Highness the Nizam dated the 2nd September 1919. The fundamental principle underlying the working of the University is that Urdu forms the medium of education although a knowledge of English as a language is compulsory in the case of all students. There is a Bureau of Translation attached to the University which produces text books required for college classes. The constitution of the University consists of a Council, a Senate, a Syndicate, Faculties and Boards of Studies. There is a Chancellor and a Vice-Chancellor both *ex-officio* officers. The executive government of the University including general supervision and control over colleges is vested in the Council which is the highest authority and which performs the function assigned to Government

in the case of British Indian Universities. The University possesses at present only one constituent college viz the Osmania University College which was opened in 1919. The Osmania University has been recognised by the Government of India as a University incorporated by law for the time being in force that is to say its examinations and degrees have been accorded the status of the corresponding examinations and degrees of a University established by law in British India.

The Hindu University Benares—The creation of the Hindu University Benares forms a landmark in the history of the Indian university system. The university is not designed to meet the needs of our province alone but to draw students from all parts of India.

It has no monopoly, no privilege. Its energies are not diffused by the necessity of super-vising distant colleges nor is its vitality impaired by the entanglement of administrative duties other than those of organising its own teaching. It is therefore the first Indian university which is primarily a seat of learning and not an administrative organisation. Its constitution is therefore very different from those of the other Indian universities. A dividing line is made between administrative matters entrusted to a large body called the Court, with an executive committee called the Council and academy matters entrusted primarily to a Senate, with an executive body called the Syndicate. The Court which is the supreme governing body besides its administrative powers, has the right to review the acts of the Senate except where the Senate has acted in accordance with the Act, statutes and regulations. With a solitary exception it is composed entirely of Hindus. The Senate has the entire charge of the organisation of instruction in the University and the colleges the course of study and the examination and discipline of students and the conferment of ordinary and honorary degrees. This university can recognise schools all over India.

The University of Dacca—With the modification of the Partition of Bengal in 1911 Dacca ceased to be the capital of the separate province of Eastern Bengal and Assam. Shortly afterwards the Government of India decided to establish a university of Dacca and the Government of Bengal appointed a committee to frame a scheme for the new University. The committee was instructed that the University should be of the teaching and residential and not of the federal type and that it should be a self-contained organism unconnected with any colleges outside the limits of the city of Dacca. The committee which was presided over by the late Mr. R. (afterwards Sir Robert) Nathan presented its report later in the year. The report is of great value and in it certain new principles are enunciated. Great emphasis was attached to physical training, and education and also to the tutorial guidance of the students. The University was to be very largely a State institution and practically all its teachers and those of its colleges were to be Government servants. Though the colleges were to be separate units, each with its separate staff and buildings they were to be linked together and with the University by a

* Includes Intermediate and grade Colleges of the new type.

close form of co-operation. The executive body to be called the Council was to have very considerable powers, subject to the sanction of Government. The Council which was to be a large and representative body was to be the legislative authority subject to the control of Government, and in other respects an advisory authority. The total cost of the full scheme was estimated at 53 lakhs but deducting certain sums which were available from other sources the net cost was put down at nearly 40 lakhs exclusive of recurring charges. These were expected to involve a net total of about 65 lakhs annually. Before the scheme thus elaborated (which had received the Secretary of State's sanction) could be taken in hand the war broke out. The Act constituting the University was passed in April 1920 and Mr. L. (now Sir) P. J. Hartog, C.I.E. was appointed the first Vice-Chancellor.

The Aligarh Muslim University—It was the aim of Sir Syed Ahmed Khan years ago to place the benefits of a liberal education within the reach of the Muhammadan community. And in 1875 a school was opened which three years later was converted into the Muhammadan Anglo Oriental College, Aligarh. The movement in favour of transforming this college into a teaching and residential university started as early as the end of the last century. In 1911 during the visit of His Majesty the King Emperor to India His Highness the Aga Khan made an appeal which resulted in the collection of large subscriptions. A draft constitution was drawn up and a consultative committee was formed. But the draft constitution was not approved by the Secretary of State, and on the question of the right of affiliating colleges outside Aligarh in particular there was a sharp difference of opinion. Government laid down as in the case of the Hindu University that the university should not have the power of affiliating Moslem institutions in other parts of India.

On October 15th 1915 a meeting of the Moslem University Association was held at Aligarh under the presidency of the P. M. (now Maharaja) of Mahmudabad when it was proposed that the meeting recommends the Moslem University Foundation Committee the acceptance of the Moslem University on the lines of the Hindu University. It was evident at the meeting that a large number of Indian Moslems were not prepared to accept a constitution for their university similar to that of the Hindu University.

In April 1917 at a meeting of the Foundation Committee the following resolution was passed—

That this meeting of the Moslem University Foundation Committee hereby resolves with reference to the letter of the Government of India Education Department dated Delhi 17th February 1917 D.O. No. 66 that the Committee is prepared to accept the best University on the lines of the Hindu University. It further authorises the Regulation Committee appointed at its Lucknow meeting with the President and Honorary Secretary of the Moslem University Association as its *ex-officio* members, to take necessary steps in consultation with the Hon. the Education Member for

the introduction of the Moslem University Bill in the Imperial Legislative Council.

The bill referred to above was ultimately introduced into the Council and was passed in September 1920. The Act came into force on December 1st 1920.

The University of Rangoon—Plans for a university in Burma had been under consideration for some years. After his arrival in Burma the then Lieutenant-Governor Sir Harcourt Butler thought that on general grounds and with some reference to the needs of the province the Rangoon University might usefully be of a more practical type than any yet attempted in India with courses in arts and science pure and applied, technology, medicine, engineering, agriculture, law, forestry, veterinary science and training, commerce and architecture. It might perhaps combine with university instruction practical studies at the Chief Court the Pasteur Institute and the hospitals, and also at the Museum which the local Government was committed to build as soon as funds were available. It is possible in Burma to a greater extent than in any of the older and more advanced provinces in India to concentrate the intellectual energies of the province in one immediate neighbourhood and to develop a really many-sided university. An Act to establish a teaching and residential college at Rangoon was passed on the 24th October 1920. This Act however did not find favour with a section of Burmese and was consequently amended in 1923. The amending Act introduced greater popular and representative elements in the composition of the Council and invested the reformed Council with greater discretionary powers in matters affecting public interest such as the question of admitting affiliation of *myethari* colleges or of admitting more colleges to the status of constituent colleges. In short it rendered the University more suited to the needs and aspirations of the province. The University authorities are the Chancellor, Vice-Chancellor, the Council (with an executive committee) and the Senate. The Council is the supreme administrative body while the Senate is an academic body with entire control of studies, examination and discipline. The Governor General as Visitor has the right to cause inspection to be made.

The Lucknow University—The foundation of this University may primarily be ascribed to the patriotism of the people of Oudh. It is a unitary teaching and residential University incorporated by an Act passed in 1920. The University authorities are (1) the Court with powers of making statutes, (2) the Executive Council which administers the property of the University and appoints examiners, (3) the Academic Council which controls the teaching and advises the Executive Council on all academic matters, (4) a Committee of Reference (a Sub-committee of the Court) deals with items of new expenditure only. The Governor General as Visitor has the same power as in the case of the Rangoon University and other new or reorganised universities.

The Delhi University—The Delhi University was created by an Act passed in 1922. The University depends for its existence mainly on the generosity of the Government of India who occupy the position of a local Govern-

* Excludes "Arts and Science" departments of teaching universities, but includes Intermediate and 2nd Grade Colleges of the new type.
 † Excludes Intermediate Colleges of new type.

ment in relation to it. It is a unitary teaching and residential University designed on the model recommended by the Calcutta University Commission for the Dacca University possessing at present three constituent colleges. The Act provides for two schemes—a provincial and a permanent one. Under the provisional scheme which is in force at present the constituent colleges remain with their hostels etc. in their existing buildings. They also retain intermediate classes. But there have been instituted so far as possible and desirable, common classes for graduate teaching. The matriculation examination is the admission test to the University courses. The permanent scheme contemplates that the existing colleges in Delhi City would become intermediate institutions and that degree classes would be conducted in new buildings to be built in Imperial Delhi. There would be halls and hostels where students would receive tutorial instruction. The Intermediate Examination of an Indian University or an equivalent examination, would become the admission test to the University. The Governor-General is the *ex officio* Chancellor. There is a Pro-Chancellor, a Vice-Chancellor and a Rector. The principal governing bodies of the University are a Court, an Executive Council and an Academic Council.

The Nagpur University—This University was created by an Act passed in 1923. Its constitution follows the recommendations of the Calcutta University Commission and the provisions in other University Acts in so far as they are applicable to local conditions. In particular the recommendations of the Calcutta University Commission have been adopted in the matter of the appointment of the Chancellor and the Vice-Chancellor and of their

powers and duties, the composition and functions of the Court, the Executive and Academic Councils, and the relations of the University with Government. The University Act provides in the first instance for a University of an examining and affiliating type in which the existence of the colleges is preserved as the unit of instruction both in the University centre of Nagpur and in other places which contain colleges admitted to the privileges of the University. The Act is so framed as to permit of a gradual development of the University into a managing and teaching body which may supplement or entirely replace collegiate by University instruction either by taking over the management of existing colleges or by instituting and maintaining its own colleges.

Andhra University—In January 1926 the Governor General accorded his assent to an Act passed by the Madras Legislative Council incorporating a new University in the Madras Presidency. The new University is called the Andhra University and is of an affiliating type and all colleges located in the Telugu country whether first or second grade professional or technical have become affiliated colleges. The university endeavours to develop scientific and technical education with special reference to the industries of the Telugu districts. It appoints its own teaching staff and will ultimately build control and maintain colleges, laboratories and hostels of its own. The Act contemplates the possibility of a rapid development in the study of Telugu in the use of the vernacular as the medium of instruction and examination and also aims at the ultimate establishment of more than one unitary and residential university in the Telugu districts. The headquarters of the university have been located at Bezawada.

The following statement mentions the normal admission tests to the various Indian Universities—

Name of University	Tests	Remarks.
1 CALCUTTA	The Matriculation Examination of the Calcutta University	
2 MADRAS	The School leaving Certificate Examination of Madras at present ultimately an Intermediate Examination	
3 BOMBAY	The School leaving Examination of the Bombay Joint Examination Board or the Matriculation Examination of the Bombay University	
4 PUNJAB	The Matriculation Examination of the Punjab University	
5 ALLAHABAD	The Intermediate Examination of the United Provinces Board of High School and Intermediate Education	
6 BENARES HINDU	The Admission Examination of the Benares Hindu University	This is equivalent to the Matriculation Examination of an Indian University
7 MYSORE	The Entrance Examination of the Mysore University	This is equivalent to the first year examination of an Indian University. Three years are spent for a degree

Name of University	Tests	Remarks
8. PATNA	The Matriculation Examination of the Patna University	This is approximately equivalent to the Matriculation Examination of an Indian University
9. OSMANIA	The Matriculation Examination of the Osmania University	
10. ALIGARH MUSLIM	An Intermediate Examination	
11. BANGALORE	The Anglo-Vernacular or English or European High School Examination	
12. LUCKNOW	The Intermediate Examination of an Indian University	Do
13. DACCA	Do	
14. DELHI	The Matriculation Examination of an Indian University at present ultimately an Intermediate Examination	
15. NAGPUR	The Final Examination held under the Central Provinces High School Education Act 1922	
16. ANDHRA UNIVERSITY	The School leaving Certificate Examination	

University Training Corps.—An interesting development in the corporated life of the Universities has been the foundation of University Corps attached to the Indian Defence Force. Such Corps are now in existence at the various University centres in British India.

The Prince of Wales Royal Indian Military College Dehra Dun—A Royal Military College has been established at Dehra Dun. The aim of this institution is to provide education on the lines of an English public school for the sons of Indian gentlemen both civil and military up to the standard required for the passing of the entrance examination of the Royal Military College Sandhurst.

Administration—The educational services are divided into (a) the Indian Educational Service, (b) the Provincial Educational Service, (c) the Subordinate Educational Service.

(a) **The Indian Educational Service** which comprises officers performing inspection and tutorial work is subdivided into two branches—one for men and the other for women. Appointments to both branches were originally made by the Secretary of State for India in Council but since May 1924 recruitment has been suspended and no further appointments will be made to this service. Each local Government will find its own recruits. All officers belonging to this service come under the special leave and pension rules. Under the recommendations made by the Lee Commission members of non Asiatic domicile are entitled to four free passages 1st class B. P. & O. during their service and to overs as pay in sterling.

(b) **Indian Educational Service (Men's Branch)**—There is a time scale of pay rising from Rs 400 by annual increments of Rs 50 to Rs 1,250 a month. There are two selection grades—one for 15 per cent of the cadre on Rs 1,250-50-1,500 a month and the other for 5 per cent on Rs 1,500-100-1,750 a month. Officers of non Indian domicile receive overseas pay in addition ranging from Rs 150 to Rs 250 a month. The principals of first grade colleges receive duty allowances of Rs 100 or Rs 350 a month. Allowances of Rs 150 a month are also granted to the Assistant Directors of Public Instruction and to other officers holding similar administrative appointments. There is one Director of Public Instruction in each province. The posts of Director are treated as prize posts for the members of the I.E.S. Their pay varies from Rs 1,500-50-1,750 a month in the North West Frontier Provinces to Rs 2,500-100-3,000 in the Presidencies of Madras, Bombay and Bengal. In some provinces the Directors have been made *ex-officio* Secretary, Deputy Secretary or Under Secretary in the local Education Departments.

(c) **Indian Educational Service (Women's Branch)**—The organisation and conditions of service are similar to those in the Men's Branch. The pay is Rs 400-25-550 a month with a selection grade of Rs 900-25-950-50-1,050 a month for 20 per cent of the cadre. In cases where the provincial cadre is very small one member of the service is eligible for a selection grade post irrespective of the percentage maximum. Officers of non Indian domicile are in addition granted overseas pay ranging from Rs 100 to Rs 150 a month. The principals of first grade colleges for women and ladies holding other administrative posts as the Deputy Directresses of Public Instruction are eligible for a duty allowance of Rs 100 a month.

(d) **Stoppage of Recruitment to the I.E.S.**—As a result of the Report of the Royal Com-

mission on the Superior Civil Services in India 1924, further recruitment to the I.E.S. was stopped with effect from May 1924. Under the scheme of the organisation of the new superior educational services all the existing posts in the Indian Educational Service will be merged into new provincial cadres which will contain special appointments not less in number than those in existence on the 9th March 1922. On the constitution by local Governments or their new superior services on particular appointments will be reserved for members of the Indian Educational Service as at present.

(e) **The Provincial Educational Service**—This service also consists of two branches one intended for men and the other for women. The service comprises posts more or less similar to those borne on the cadre of the Indian Educational Service but of secondary importance. Candidates are recruited in India by local Governments. They are invariably graduates of Indian universities and natives of the province concerned.

(f) **Provincial Educational Service (Men's Branch)**—The minimum and maximum pay has been fixed at Rs 200 and Rs 500 a month respectively and local Governments have been empowered to settle grading within these limits.

(g) **Provincial Educational Service (Women's Branch)**—The minimum pay is Rs 200 a month and the maximum pay Rs 500 a month. As in the case of the Men's Branch local Governments are competent to fix grading within these figures.

(h) **The Subordinate Educational Service**—This service is meant for posts of minor importance. Each province has its own rate of pay. For example in the Punjab the maximum pay of S.E.S. officers is Rs 250 a month.

Department of Education, Health and Lands of the Government of India—In 1910 a Department of Education was established in the Government of India with an office of its own and a Member to represent it in the Executive Council. The first Member was Sir Harcourt Butler. In 1923 the activities of the Department were widened in the interests of economy by absorption in it of the Department of Revenue and Agriculture. The enlarged Department has been designated the Department of Education, Health and Lands. Sir Muhammad Habibullah and Mr J. W. Bhoré are the present Member and Secretary respectively. The Department possesses an educational adviser styled Educational Commissioner. The present Educational Commissioner is Mr B. Jitichallos C.I.E. M.A.

Calcutta University Commission—The Report of the Calcutta University Commission was published in August 1919 and in the following January the Government of India issued a Resolution summarising the main features of the Report and the recommendations of the Commissioners.

The Government of India drew special attention to the following points in the Report—

(i) High schools fail to give that breadth of training which the development of the country and new exigencies of employment demand.

- (6) The Intermediate section of University education should be recognized as part of school education and should be separated from the University organisation.

- (7) The defects of the present system of affiliated colleges may be mitigated by the establishment of a strong central teaching body the incorporation of unitary universities (as occasion arises) a modification of the administrative machinery which will admit of fuller representation of local interests and supervision of different classes of institutions by several appropriately constituted bodies.

The Commission gave detailed suggestions for the reorganisation of the Calcutta University for the control of secondary and intermediate education in Bengal and for the establishment of a unitary teaching University in Dacca. These measures concerned only Bengal but it was generally recognised that some of the criticism made by the Commissioners admit of a wider application. Committees were consequently appointed by the Universities of Madras Bombay Patna and the Punjab to consider the findings of the Commission. In the United Provinces two committees were appointed one to prepare a scheme for a unitary teaching University at Lucknow the second to consider measures for the reorganisation of the Allahabad University and the creation of a Board to control secondary and intermediate education.

In Bengal the first outcome of the Commission's Report was the passing of the Dacca University Act in the Imperial Legislative Council in March 1920 mentioned in detail elsewhere. A scheme for the reorganisation of the Calcutta University is under consideration.

The Reforms Act—The Reforms Act of 1919 has altered the conditions of educational administration in India. Education is now a transferred subject in the Governors' provinces and is in each such Province under the charge of a Minister. There are however some exceptions to this new order of thing. The education of Europeans is a Provincial reserved subject for it is not within the charge of the Minister of Education and to the Government of India are still reserved matters relating to Universities like Aligarh Benares and Delhi and all such new universities as may be declared by the Governor-General in Council to be central subjects. The Government of India are also in charge of the Chiefs' Colleges and of all institutions maintained by the Governor-General in Council for the benefit of members of His Majesty's Forces or of other public servants or of the children of such members or servants.

Chiefs' Colleges—For the education of the sons and relatives of the Chiefs and Princes of India whose families rule over one-third of the Indian continent five Chiefs' Colleges are maintained as—

- (i) Mayo College Ameer, for Rajputana Chiefs
- (ii) Dule College Indore for Central India Chiefs
- (iii) Aitchison College, Lahore for Punjab Chiefs
- (iv) Rajkumar College, Rajkote for Kathiwar Chiefs and

- (v) Rajkumar College Raipur for Central Provinces and Bihar and Orissa Chiefs

In point of buildings staffs and organization these institutions approach English Public Schools. Students are prepared for a diploma examination conducted by the Government of India. The diploma is regarded as equivalent to the matriculation certificate of an Indian University. A further course of University standard called the Higher Diploma is conducted at the Mayo College. The examination for this Diploma is also held by the Government of India. Its standard is roughly equivalent to that of the B.A. diploma of an Indian University.

Inter University Board—The idea put forward by the Indian Universities Conference in May 1924 for the constitution of a central agency in India took practical shape and an Inter University Board came into being during 1925. Twelve out of fifteen universities joined the Board. Its functions are—

- (a) to act as an inter university organisation and a bureau of information
- (b) to facilitate the exchange of professors
- (c) to serve as an authorised channel of communication and facilitate the co-ordination of university work
- (d) to assist Indian universities in obtaining recognition for their degrees diplomas and examinations in other countries

(e) to appoint or recommend where necessary a common representative or representatives of India at Imperial or International conferences on higher education.

(f) to act as an appointments bureau for Indian universities.

(g) to fulfil such other duties as may be assigned to it from time to time by the Indian Universities.

Each member University has to make a fixed annual contribution towards the expenses of the Board.

The meetings of the Board are held yearly. The Board consists of one representative of each of the member Universities and one representative of the Government of India.

Indigenous Education—Of the 1,05,14,221 scholars being educated in India 6,11,118 are classed as attending private or unrecognised institutions. Some of these institutions are of importance. The Gurukul near Hardwar and Sir Rahimnagar Nath Tagore's school at Bolpur have attained some fame. Mr. Gandhi's school at Ahmedabad has attracted attention and the numerous monastery schools of Burma are well known. Connected with every big Mosque in northern India there is some educational organisation and the schools attached to the Fatehpuri and Golden Mosques at Delhi and the Dar ul Uloom Deoband are noted.

These institutions generally have a religious or national atmosphere and are possibly destined to play an important part in the future of India.

Indian students in the United Kingdom—There were about 1,400 Indians studying in the United Kingdom in 1925. 60 of these 60 were at the time of writing at the London University 18% at Edinburgh 11% at Cambridge and 6% at Oxford the rest were studying at provincial Universities or receiving technical training.

The Co-operative Movement.

The Need—More than seventy per cent. of the vast population of India subsist on agriculture and the majority of these millions generally live under present conditions from hand to mouth. The ryot's occupation is healthy and productive and he is proverbially honest and straightforward in his dealings except when years of famine and hardship make him at times crafty and recalcitrant. Owing to his poverty combined with want of education and consequent lack of foresight he has to incur heavy debts to meet occasional expenses for current seasonal purposes, the improvement of his land or for ceremonial objects and he has therefore to seek the assistance of the local money lender known as the Sowkar or the Mahajan. The rates of interest on such advances though varying from province to province and even in different parts of a province are generally very high. In addition to charging excessive rates the Sowkar extorts money under various pretexts and oftentimes from the needy borrower bonds for amounts in excess of those actually advanced. One of the chief causes of the ryot's poverty is that owing to the absence of security and his short-sightedness due to want of education he did not as a rule collect and lay by his savings but frittered away his small earnings in extra vague and unproductive expenditure on the purchase of trinkets and ornaments and on marriage and other ceremonies. Tradition says that he hoarded gold under the round with the likelihood that on his death the money was lost to his family for good. This absence of thrift and the habit of dependence in case of difficulty on the Government or on the Sowkar are the bane of his life. There is besides a general absence of ideals or desire for progress. A co-operative society changes all this inasmuch as it provides him with a suitable institution in which to lay by his savings and teaches him the valuable lesson of self help through the sense of responsibility he feels in being its member. Thus the chronic poverty and indebtedness of the Indian agriculturist afford a very good field for the introduction of co-operative methods especially as his work is of a productive character likely to enable him to earn a better living under circumstances more favourable than they are at present.

Genesis of the Movement—The question of improving rural credit by the establishment of agricultural banks was first taken up in the early nineties when Sir W. Wedderburn with the assistance of the late Mr. Justice V. G. Ranade prepared a scheme of agricultural banks which was approved of by Lord Ripon's Government but was not sanctioned by the Secretary of State. The matter was not again taken up until about fifteen years later when Lord Wellesley's Government in Madras deputed Mr. F. A. (now Sir Frederick) Nicholson to report on the advisability of starting agricultural or land banks in the Presidency for the financing of the agricultural industry. There was in existence in Madras an indigenous system of banking available for persons of small means. This institution

called the Nidhi corresponded in some respects to the provident funds and friendly societies in European countries. Though these Nidhis provided cheap capital to agriculturists the spirit of co-operation was lacking in them. Sir Frederick submitted an exhaustive report to Government suggesting that the formation of co-operative societies afforded an excellent means for relieving rural indebtedness. Unfortunately the report was not received favourably either by the non-official public or by the Government of Madras and no action was taken on the recommendations made in it. The next few years saw two of the worst famines from which India had ever suffered and in 1901 Lord Curzon appointed a Commission to report on the measures to be adopted in future to protect the ryot from the ravages of famines and to relieve distress. The Commission laid stress on the proper working of the Agricultural Loans and the Land Improvement Loans Acts under which *loans* advances are made by Government to *cultivators*. This system was given a long trial in the years previous to the great famines as well as during the years succeeding the 1899-1900 famine. But it is acknowledged on all hands that the system has not been successful in solving the problem of rural stagnation as it is clear that it is not sufficient for obtaining cheap capital alone which will rebate the agriculturist and relieve him from his debts but the provision of capital combined with the inculcation of habits of thrift and self help. This Commission also recommended that the principal means of raising famines was by strengthening the moral backbone of the agriculturist and it expressed the view that the introduction of co-operation in rural areas might be useful in securing this end.

Co-operative Credit Societies Act—These recommendations induced Lord Curzon to appoint a Committee with Sir Edward Law at its head to investigate the question and a report was submitted to Government recommending that co-operative societies were worthy of every encouragement and of a prolonged trial. Sir Anthony (now Lord) Macdonell and others were at the same time making experiments on similar lines in the United Provinces and the Punjab with satisfactory results. All these activities however took an organised shape only when Lord Curzon's Government introduced in the Imperial Legislative Council a Bill to provide for the constitution and control of co-operative credit societies. The main provisions of the Bill which became the Co-operative Credit Societies Act (14 X of 1904) were—

(1) That any ten persons living in the same village or town or belonging to the same class or caste might be registered as a co-operative society for the encouragement of thrift and self help among the members.

(2) The main business of a society was to raise funds by deposits from members and loans from non members, Government and other co-operative societies and to distribute the money thus obtained in loans to members or with the special permission of the Registrar to other co-operative credit societies.

(3) The organization and control of co-operative credit societies in every Presidency were put under the charge of a special Government officer called the Registrar of Co-operative Credit Societies.

(4) The accounts of every society were to be audited by the Registrar or by a member of his staff free of charge.

(5) The liability of a member of a rural society was to be unlimited.

(6) No dividends were to be paid from the profits of a rural society but the profits were to be carried at the end of the year to the reserve fund although when this fund had grown beyond certain limits fixed under the bye-laws a bonus might be distributed to the members.

(7) In urban societies no dividend was payable until one-fourth of the profits in a year were carried to the reserve fund.

Soon after the passing of the Act the local Governments in all the Presidencies and major provinces appointed Registrars with full powers to organise, register and supervise societies. In the early stages of the working of this Act Government loans were freely given and the response to the organising work of the Registrars was gradual and steady throughout most parts of the country.

Co-operative Societies Act—As co-operation progressed in the country defects were noted in the Co-operative Credit Societies Act and these were brought to the attention of Government by the Conference of the Registrars which were for some years held annually. In two directions the need for improved legislation was especially felt. In the first place the success of credit societies had led to the introduction of co-operative societies for distribution and for purposes other than credit for which no legislative protection could be secured under the then existing law and secondly the need for a free supply of capital and for an improved system of supervision had led to the formation of various central agencies to finance and supervise primary credit societies and these central agencies ran all the risks attendant on a status unprotected by legislation. The Government of India recognising the desirability for removing these defects decided to amend the old Act and a Bill embodying the essential alterations proposed was introduced in the Imperial Legislative Council and after a few amendments it emerged from the Council as the Co-operative Societies Act (II of 1912) replacing Act X of 1904. The outstanding features of the new Act were as under—

(a) It authorised the formation of societies for purposes other than credit which was possible under the old Act only with the special permission of the Local Government (This extension of co-operation to purposes other than credit marks an important stage in its development in India.)

(b) It defined in precise terms the objects for which co-operative societies could be organised.

(c) It removed the arbitrary division of societies into rural and urban and substituted

a more scientific division in accordance with the form of liability adopted.

(d) It facilitated the growth of central agencies by insisting on limited liability by means of a special clause about the registration of a society one of whose members is a registered society.

(e) It empowered Local Governments to frame rules and alter bye-laws so as to put restrictions on the dividends to be declared by societies and allowed to societies with unlimited liability the discretion to sanction distribution of profits to their members according to principles laid down by the Local Governments.

(f) It allowed societies with the permission of the Registrar to contribute from their net profits after the reserve fund was provided for amounts up to 10 per cent of their remaining profits to any charitable purpose as defined in the Charitable Endowments Act (This kept the movement in touch with local life by permitting societies to lend assistance to local educational and charitable institutions.)

(g) It prohibited the use of the word co-operative as part of the title of any business concern except a registered society.

Composition of the Capital of Agricultural Societies

—On the organization of agricultural credit was necessarily concentrated the attention of the promoters for it presented a far more important and far more difficult problem than urban credit. There was a great variety of types among the agricultural societies started in different provinces and some Registrars adopted the "Balfour" and some the "Lusatti" methods in their entirety. The commonest type as yet was in the Punjab, Burma and the United Provinces—and now extended practically all over India—is the unlimited liability society with a small fee for membership and a share capital the share payments to be made in annual instalments. In some places the bye-laws insist on compulsory deposits from members before entitling them to enjoy the full privileges of membership. The system in Bombay and some parts of the Central Provinces is different there being no share capital but only a division fee. Part of the working capital is raised by deposits from members and other local sympathisers but the bulk of it in all provinces is obtained by loans from central and other co-operative societies. In all the Provinces the Government set apart in the initial stages every year a certain sum to be advanced as loans to newly started co-operative societies usually up to an amount equal to the deposits from members raised by a society before aid in the form of direct money does to agricultural credit societies has now become an exception rather than the rule and this withdrawal in no way hampers the development of the movement on account of the rapid increase of co-operative financing agencies and the growth of public confidence in the primary societies. Out of a total working capital of 28 crores 27 crores were shares, 34 crores reserves, 14 crores deposits of members, 14 crore deposits from non-members and societies and 14 crores loans from central societies in Bombay since 1913 Government place at the disposal of the Provincial Bank an allotment

for distribution as advances to agriculturists under the Land Improvement Loans Act such advances to be made through the primary societies and the central banks to which these are affiliated.

Constitution of Agricultural Credit Societies.—The typical agricultural credit society in India corresponds to the 'Raiffeisen society' the management being gratuitous, the profits indivisible and the area of work limited. In the Punjab the United Provinces and Burma where shares form an integral part of the system, the distribution as dividend of a portion of the profits after ten years working is permitted under certain restrictions although in the Punjab the tendency now is to make the profits wholly indivisible and the shares non-withdrawable. In several parts of the country there are villages where a few literate agriculturists may be found but many of these are hardly fit enough to undertake the responsible work of a secretary being practically ignorant of account keeping. In such villages either the village school master or the village accountant is appointed secretary. In some places where a suitable person is not available on the low pay a single society can afford neighbouring societies are grouped together with a whole-time well paid secretary. In the Central Provinces, especially and to a certain extent in Bihar and Orissa, Bengal and the United Provinces, the accounts are written up by group secretaries, clerks or Moharrirs controlled more or less by the inspecting staff of central banks to which societies are affiliated. As the work of societies develops the need for trained secretaries is being felt more keenly for it is now realised that the function of a secretary does not consist merely in writing the accounts correctly. With a view to meet the demand for trained secretaries training classes have been organized in Bombay in the Punjab, in Burma and elsewhere during the last few years and efforts have been made to provide education in co-operation through the new educational and propagandist associations which have been started in some of the major provinces. Arrangements have also been devised in some provinces to educate the members of managing committees in the principles of the movement through peripatetic instructors and courses of simple lectures delivered at central villages. In Burma the system of guaranteeing unions has been utilized to promote co-operative education among rural workers.

Internal Management of Societies.—The managing committee of a society consists of five to nine members the chairman being usually one of the leading persons in the village. The daily work is carried on by the secretary but the managing committee supervises this and has alone the power to admit new members, to receive deposits to arrange for outside loans, to grant loans to members and to take notice of defaulters. The practice is now growing of fixing the normal credit of every member once or twice in the year at a general meeting and the committee can sanction loans only within the limits so fixed. The accounts of the society are kept by the secretary and in the necessary forms, papers, and books are

usually supplied from the Registrar's office or the central organizations referred to above to simplify the work of the secretary. The books are kept according to the rules framed by the Local Governments and are open to inspection by important local officials and the Registrar and his staff. The accounts are audited at least once a year by the auditors working under the Registrars of Co-operative Societies and the societies are inspected from time to time by honorary or paid inspectors. In Burma and Madras the inspection is carried out by unions while in the United Provinces Bihar and Orissa, Ajmere-Merwara and Bengal the responsibility for supervision rests mainly with the central banks. In the Central Provinces the inspection is controlled by the Provincial Federation working through the central banks. In Bombay supervision is exercised partly by unions partly by central banks and partly by honorary organizers. In the Punjab while paid for by societies the inspecting staff works under the direct orders of the Provincial Union with the Registrar as its principal.

The supreme seat of authority in co-operative societies is the entire body of members assembled in general meetings at which every member has one vote and one only. At the annual general meeting held at the close of the co-operative year the accounts are submitted, the balance-sheet passed and the managing committees with the chairman and secretaries are elected. The general meeting fixes in some provinces the borrowing limit of individual members, lays down the maximum amount up to which the managing committee may borrow during the ensuing year, dismisses members for misconduct or serious default and settles the rates of interest for loans and deposits. All the net profits of a society are annually carried to the reserve fund which is indivisible that is incapable of distribution as dividend or bonus which cannot be drawn upon without the sanction of the Registrar and which must be invested in such a manner as the rules framed under the Act may prescribe. It is intended to meet unforeseen losses and to serve as an asset or security in borrowings. Except in the Central Provinces and Madras and to some extent in a few other provinces the reserve funds of primary societies are generally utilised as an addition to their working capital unless they have considerable outside deposits and have to make special arrangements in respect of fluid resources to cover such borrowings.

Main defects.—The main defects of primary societies may be summarized. The most prominent is the evil of unpunctuality. The percentage of over dues to total outstandings was a little over 18 for all the provinces and States but was as high as 30 in one province. These arrears are due more to easy going ways of life and the narrowness of margin between income and expenditure than to recalcitrancy. Next is the frequent apathy of the members in the work of the societies owing to their lack of education and an absence of higher ideals. The general body very often leaves affairs wholly to the discretion of the committee and the committee transfers its powers to the chairman, secretary or some other member. Then there is the

objectionable practice of making book adjustments and taking bonus loans. A grave defect is the inability of the societies to act as real banks accepting for deposit money when presented meeting withdrawals of such savings deposits or temporary surplus funds without delay and granting loans on demand according to actual requirements. In many a society activity is displayed only twice in the year, once during the cultivation season when loans are advanced and again after harvest time when recoveries are made. In several provinces members have to wait for weeks before they can get funds for agricultural operations and as such operation must be proceeded with resort to the money lender is not an uncommon. With the approval of natural credits in advance and the provision of banking facilities through the opening of branches of district banks or the starting of central banks for smaller areas this defect is now being gradually remedied. To provide for members who want large loans on the security of land for clearance of debt or agricultural improvement separate land mortgage societies have been started in the Punjab and may be found necessary in other Provinces where large amounts are required by agriculturists on the security of their landed property. To provide finance the Punjab Provincial Bank after entering into an agreement has issued long term debentures bearing interest 6 per cent to the extent of Rs. 6 lakhs. A similar scheme for land mortgage banks for a group of villages has also been accepted in Madras where the local Government have agreed to the subscribe to half the capital required if the other half is raised locally. Few have as yet commenced working but the system does not seem to have found favour and the revision of the scheme is under consideration. It is proposed in Burma to have for the work of land mortgage credit a separate organization distinct from the organization for co-operative credit. In Bombay the assistance asked for from the State for the scheme of co-operative land mortgage banks is the recognition of the land mortgage banks debentures as trustee securities and a Government guarantee for payment of interest. The Government of Bombay have approved of the starting of three societies for land mortgage credit but in the initial stages of finance will be provided for these bodies by the existing Bombay Provincial Bank. The debentures issued by which in accordance with its agreement with the Secretary of State will be purchased by the Government to the extent of Rs. 6 lakhs. As the law in many provinces place a limitation on the amount of loan that can be advanced to an individual and financing agencies are often unable to make long term advances societies cannot be said everywhere to have supplanted the money lender.

Non Agricultural Credit Societies.—Non agricultural credit societies have grown up in towns and cities as part of a movement for improving the economic condition of persons engaged in handicrafts and cottage industries of artisans and small traders members of particular castes and employees of big firms and Government departments. These societies have usually a limited liability. This is due partly to the absence

of any assets in real property among their members but mainly to the field of their work not being compact as is the case with agricultural societies where every member may be expected to know every other member. Their constitution is based on the Schnitzel Delitsch model. In most societies the management is honorary though sometimes when the sphere of a society's work is extended a paid staff is employed. There is in all societies a substantial share capital payments being made in monthly instalments and the rest of the working capital is obtained by local deposits from members and others. Loans from co-operative banks and societies usually form only a meagre proportion of the capital. At the end of the year 1925-26 out of a total working capital of nearly nine crores only 80 lakhs were held from central banks.

At the end of every year one fourth of the net profits must be carried to the reserve fund and the balance may be distributed as dividend or bonus. There are a few drawbacks in the working of these societies. The most serious of these complaints are that the spirit of co-operation is lacking in many non-agricultural societies that there is too great a desire to go in for profit making and dividends and a growing tendency to make the societies close preserves once they have started running on profitable lines. The rates of interest on loans are at times higher than they ought to be and the men at the head of the societies are loth to admit new members who are in need of loans for fear of the latter cutting down the profits.

Included in this group are communal societies and societies of employees of firms, railway companies and Government offices. There are again in Bombay and Burma a few societies organized on the lines of the People's Banks of Italy to assist small traders and artisans in towns and there are also some societies comprising members of particular communities. The larger banks in Bombay and Burma open current accounts grant cash credits and overdrafts and issue or discount local bills of exchange. In Bombay during the last few years some of the urban peoples banks have also begun to finance traders on the security of goods including agricultural produce and this line of work is expected to develop considerably in course of time. These banks give promise of developing a truly non capitalist system of banking run for the people and by the people providing for the person of small means those modern banking facilities which have so largely assisted in developing trade and industries in other countries. Some of the larger non agricultural societies after meeting the needs of their members have large balances on hand which they were allowed with the previous sanction of the Registrar, to advance to smaller primary societies. This practice is however being now discontinued and the surpluses of all primary societies are being concentrated in their central banks through which all finance is provided.

With the growth of industries and the development of cities an important labouring class has grown up in big industrial towns and this class is as deeply indebted and as badly remunerated as the agriculturists

ultimately are Co-operation, if introduced, among people of this class provides opportunities of organization for common ends besides being the means of their economic regeneration. Systematic efforts have been made, however, only in a few centres elsewhere. Within co-operation has so far been confined more or less to middle class people. The first experiment among backward classes was initiated in Bombay under the auspices of an organization known as the Debt Redemption Committee. Considerable work in this direction has also been done in Madras through social workers and the Labour Department, particularly among the depressed classes and among the low paid employees of municipal bodies. The Social Service League of Bombay and the Y M C A in several other centres have lately started a large number of credit societies among factory workers and the formation of co-operative credit societies for workers in factories has come to be recognized as an essential feature of every well-considered scheme of industrial welfare work.

Loans advanced.—The total amount of loans advanced to members by agricultural and non-agricultural societies during the year 1925-26 was Rs. 10,98,49 0/8 and Rs. 6 58,24,485 respectively. Loans are mostly given on the security of two co-members. Under the Act societies are allowed, subject to certain conditions, to advance loans on the hypothecation of moveable or immovable property and there is nothing unco-operative in this so long as personal security which is the central principle of co-operation is given and the borrower's property is recognized as only a secondary or collateral protection. Mortgages are taken occasionally especially as security for long term loans or loans for large amounts. Agricultural credit societies are not permitted to grant advances on the security of moveable property without the special sanction of the Registrar, owing to the difficulty likely to be experienced in valuing such property and keeping it in safe custody. Recently however in Madras, Bombay and Burma the practice has grown up of granting short-term advances against agricultural produce to be kept in possession by the societies or by some central organization on their behalf. The system of advances on the specific security of crops in the fields has also been introduced in some provinces. Loans for agricultural purposes are made repayable at harvest time while two or three annual instalments are allowed for repayment of advances taken for purchase of bullocks, carts, implements or for ceremonial or domestic expenses. The repayment of loans for liquidation of previous debt or for land improvement or purchase and installation of agricultural machinery is spread over a longer period extending from five to ten years.

It is impossible to insist on the restriction of loans to productive objects and there are circumstances under which unproductive loans are permissible and even advisable. What should be and generally is borne in mind is that precautions are taken by societies that the expenditure is inevitable and that it is not excessive in amount. The chief objects of the loans advanced are cultivation expenses, purchase of live-stock, fodder, seed, manure and agricultural implements,

payment of rent, revenue or irrigation dues, land improvement and sinking of wells, purchase of new lands, repayment of debt or redemption of mortgaged land and personal maintenance in times of scarcity in agricultural societies and for purchase of raw materials for industries or trade for house building, for education or medical relief and for food and other necessities of life in non-agricultural societies. The rates of interest vary from 9½ per cent. in Madras and Bombay to 12½ in the Punjab and 16 in almost all the other major provinces both for agricultural and non-agricultural societies. Rates of lending by central banks vary from about 7 or 8 per cent. in Madras and Bombay, to 9 in the Punjab, 10 in Burma and about 12 in all the other major provinces. An unsatisfactory feature of the co-operative system in some of the provinces is the laxity and unpunctuality in the matter of repayment of loans by members and a general apathy in the matter on the part of societies. As co-operation is both financially and educationally a failure unless punctuality in repayment is ensured no efforts are spared by organizers to educate societies in this respect. The Co-operative Societies Act grants to societies priority of claim over other creditors (except the State or the landlord) to enforce any outstanding demand due to the societies from members or past members upon the crops or other agricultural produce and upon the cattle, fodder or agricultural implements in cases where loans have been advanced for the purposes specified. Law courts have ruled that the claim is not valid unless a decree is obtained by a society in its favour in advance. To carry out the intention of the framers of the legislation it is proposed to convert this claim into a lien and thus get over the legal difficulty and this has already been done under the Bombay Co-operative Societies Act, 1925. Most local Government have also framed rules under the Act enabling the Registrar to refer disputed claims to arbitration and to enforce the awards of the arbitrator in the same manner as decrees of the Civil Court. Under the rules in some provinces, and according to the new Act in Bombay sums due under awards of arbitrators are under certain conditions made recoverable according to the procedure allowed for the recovery of arrears of land revenue. The Local Governments of Bengal and Bihar and Orissa were the first to adopt enactments enabling the contributions levied by the liquidator of a cancelled society to be collected in the same manner as arrears of land revenue on an application being made in that behalf by the Registrar of Co-operative Societies. Legislation on similar lines has since then been adopted in almost all other provinces.

The Financing of Agricultural Societies.—As soon as the initial stage of the movement passed, a very urgent problem had to be faced. This was to finance agricultural societies the number of which was growing rapidly. And the problem was solved in different provinces according to the special conditions and the stages of development the movement had attained. In Madras a central bank which lent to co-operative societies all over the Presidency was started without Government aid as early as in 1907. This was followed by the starting of banks at district head-quarters.

ters. In other Presidencies, district and taluka banks were established making good the deficiency in the local capital of the societies within their respective areas of operations and in some places joint stock banks were persuaded to make advances to agricultural societies direct or through the medium of local central banks. A large number of prosperous non-agricultural societies, as stated above, could afford to make temporary advances to agricultural societies out of their surplus funds. Government aid was also freely given in a few Provinces, although with the progress of the movement this aid was discontinued. In Bombay, there was no movement to start local financing agencies and the slow increase in the number of societies made it difficult for central banks with a restricted area of operations to work successfully. Accordingly, the Bombay Central Co-operative Bank was founded in 1911, with the object of financing co-operative societies throughout the Presidency. Later on local central banks came to be started and have taken over from the central bank at Bombay the work of financing societies in the various districts. The bank at Bombay has, therefore, assumed the functions and even the name of a Provincial Bank. It confines its dealings with primary societies to those areas where central banks are not likely to be established in the near future or where special local circumstances favour direct relations with a strong financial organization. For areas served by it, the Provincial Bank has opened fifteen branches and ten branches have been started by five of the district central banks.

The Madras Central Bank referred to above has also been converted into a Provincial Bank working through the district banks. A Provincial Bank with central banks and societies affiliated to it is in existence in Upper Burma, and this Bank finances primary societies either through the affiliated local banks of which, however, the majority are new and with resources undeveloped, or through the guaranteeing unions composed of societies. An Apex Bank was started in the Central Provinces in 1915 to form a link between the district banks in the Province and the joint stock banks with branches in the province. It led to the establishment of a Provincial Bank with a similar constitution to Bihar and Orissa. A Provincial Bank composed of central banks as shareholders has been started in Bengal where, as also in Bihar and Orissa, primary societies are at present financed by central banks at district or taluka headquarters. In the United Provinces, primary societies are financed on the same system and there, too, the starting of a Provincial Apex Bank under which central banks will be federated has long since been under contemplation, but the proposal has been finally abandoned by the Local Government. The Punjab has a local central banking system and an Apex Bank with central banks, and societies as shareholders has been started, with power to issue debentures, as in Bombay with interest guaranteed by Government. Debentures of the value of Rs. 5 lakhs have already been issued with interest at 6 per cent. guaranteed by Government. In addition to the Provincial Banks mentioned

above, Assam has a Provincial Bank as also the Indian States of Mysore and Hyderabad.

The constitution of central banks is not uniform, but the existing banks may be classified under three general heads—(1) banks of which the membership is confined to individuals or where societies are admitted as members on exactly the same footing as individuals, (2) banks of which the membership is confined to societies, and (3) banks which include societies and individuals as their members and secure to societies separate representation on the board of directors. The majority of the central banks are of the mixed type and there are hardly any of them which now adhere to the old capitalist constitution. The federal type is theoretically the best but the paucity of the resources of the constituent primary societies, the lack of personnel and the need for waiting the support of the urban middle classes have all combined to make the mixed type the most popular in almost all provinces. In Bengal and the Punjab as also to a smaller degree in the United Provinces and Bihar and Orissa, there has recently been an increase in the number of federal central banks, which are found to work well, provided their area of operations is much smaller than a revenue district and they serve a compact group of well established societies. Branches of banks, central and provincial, have been tried with success only in Bombay.

Functions of Central Banks.—The functions of central banks are to balance the funds of societies and to supply capital. But their duties are not limited to the provision of banking facilities only, but often include the organisation and supervision of societies. Hence in all the major provinces with the exception of the Punjab, Madras and Burma, central banks perform the functions of supervision and guidance of the societies affiliated to them, and in some they also organise new societies and even take up the work of training and propaganda. Usually, the unit of area for a central bank is fixed as so terminals with the whole of a revenue district, as the personnel necessary for its successful working may be difficult to secure in a smaller area. However, in most of the provinces of Upper India and Bengal there are in existence central societies for talukas and occasionally for smaller tracts. An important class of institutions included under the statistics of central societies are unions. These may be described as federations of societies which are maintained for supervision, either combined or not with the assessment or guarantee of loans to primary societies. They do not, however, undertake banking business, except in the Punjab, the unions in which serve for the smallness of the area they cover in no way differ from the pure type of central bank referred to above. These supervising unions have a very restricted area of operations, within a radius of five to eight miles from a central village. They are accepted as integral parts of the provincial organisation in Burma and originally in the Central Provinces, also in one province serving as a link between primary societies and the provincial bank and in the other between primary societies and local banks. The system has also been extended to Madras.

though in that province no guarantee is undertaken by the unions. In Bombay, guaranteeing unions were introduced as local agencies for supervision and assessment of credit, but the policy now is to have new unions which achieve the guarantee and work as supervising and local controlling bodies with a fairly wide area of operations and engage competent well-trained supervisors. In Burma and Madras some progress has been made in federating the unions into district councils intended to co-ordinate local activities and represent local co-operative interests.

Organisation and Propaganda—It may be mentioned that in most of the provinces, the work of organising and looking after the societies is done by the Registrar with the help of a staff of assistant registrars, auditors and other officers and a few honorary non-official workers. In Bengal, Bihar and Orissa, and the United Provinces where the central bank system has developed properly, the directors of the central banks either themselves or through a paid agency organise societies and, as stated above, supervise their working. Apart from these the number of honorary workers is steadily increasing and in some provinces there is a staff of specially appointed honorary organisers who regularly assist the Registrars. The activities of the honorary workers are often, however, spasmodic and unorganised, and in most of the major provinces the need has been felt for some co-operative institution which will co-ordinate and systematise the efforts of non-official workers, and place their activities on a responsible basis. The objective is to have the movement directed and controlled through self governing representative bodies like organisation societies or federations existing in Germany, England, Ireland and elsewhere. Such institutions carry on active educational propaganda, and through the agency of local committees and groups of workers assist in the organization of new societies and attend to their supervision. Arrangements are made for carrying on the audit of societies—for which Government cannot continue to increase the official staff to an unlimited extent—on payment of some fixed contributions. Finally such federations gradually manage to have the ultimate voice in the determination of policy and subject to the statutory powers of the Registrar may hope to take over in course of time the entire control of the co-operative organization in a province. In the Central Provinces there functioned as a controlling body a Federation of Co-operative Banks and Societies which provided a regular and efficient system of supervision audit and control arranged for the training of the federation staff, attempted to secure uniformity of practice among co-operative institutions and to promote their interest and foster the spread of co-operation by active propaganda. The working of this Federation was adversely criticised in the report of a Committee of Inquiry appointed by the Local Government in 1922, and it was proposed that this body should be dissolved and replaced by separate educational institutes for the Central Provinces and Berar. Though this step has not yet been taken, institutes for education and propaganda have already been started in Berar and the Jubulpore and Nerbunda Divisions. A Provincial Union is also in existence in Madras, whose scope are mainly educational and propagandist.

Its activities are at present confined to the issuing of co-operative journals and the holding of conferences. Its constitution and its lines of work have now been revised so as to make it the central self governing organisation in the movement but its working has been considerably hampered by lack of funds and want of support from societies. Its relations both with societies, unions, district federations and the local organizations for Andhra Pradesh, Malabar and Kanara are still undefined. A Central Institute to focus the efforts of co-operative workers and to carry on propagandist work was established in Bombay in 1918. The objects of this institution are to develop the co-operative movement in the Presidency by promoting the study of co-operation and by co-ordinating the activities of several existing propagandist and organisation agencies. The Institute has no powers of control, though it is expected to ascertain and represent the views of co-operators on questions affecting the movement. The activities of the Institute in the moramill are carried on through its divisional branches formed on a linguistic basis and local branches in most revenue districts. This is the most active among non-official central organizations in India and has established international relations. The Provincial Co-operative Institute, as well as similar organizations in other parts of India, join in the celebration of the International Co-operators Day on the first Saturday in July. Public addresses, social gatherings, conversational processions and mass meetings are arranged on this day in villages towns and cities. Its constitution has recently been revised with a view to give to societies a larger representation and a pre-dominant share in the working. The Institute receives a handsome grant from Government but will be in a position to increase its income from within the movement under its revised bye-laws. In Bengal, a similar propagandist organization has been started with identical aims. The Society has taken over some of the educational and propagandist work hitherto performed by the Co-operative Department and has assisted in the organization of various non credit activities among which prominent mention may be made of the starting of Co-operative Societies for the sale of jute and paddy and the supply of agricultural requisites. It has projected a scheme for the training of members of village societies and their secretaries. A federation with a constitution more or less similar to that of the Central Provinces Federation but having divisional boards to decentralize control is also in existence in Bihar and Orissa and has appointed a special officer for Propaganda and development. In the Punjab, a provincial union with the Registrar as President has been organized to conduct the audit and inspection of primary societies and to under take general propagandist work. In Burma, the audit of primary societies is conducted by a Provincial Co-operative Council consisting of representatives of co-operative institutions. This also assists in the organization of the provincial conference and acts as an advisory body to the Registrar. Organisation, supervision and propaganda are furthered by district federations of unions of primary societies. Educational and propagandist bodies like the Institute in Bombay have been started in the States of Hyderabad.

had, Mysore and Travancore. These are all recent developments and it is still too early to forecast on what lines the transfer of work to representative co-operative agencies will be carried out. In the beginning of the year 1923, an informal Conference of all these institutes and federations was held in Bombay at which it was decided to convene an All India Conference periodically and to establish closer contact among these bodies by the starting if necessary of an All India Confederation of these bodies. Along with this Conference was also held another Conference of Provincial Co-operative Banks in different provinces and Indian States the most important subject for the consideration of which was the proposal for the formation of an All India Bank. To secure co-ordination in the working of existing provincial banks to bring about closer touch and to convene periodical Conferences, an association of the provincial banks has been started to which has been referred for consideration the proposal for an All India Co-operative Bank. This Association has made a good beginning by educating public opinion on the place of co-operative banking in the proposed scheme of a central bank and co-ordination of banking through the agency of a Reserve Bank of India. As a result of its efforts the Joint select Committee of the Indian Legislature has made provision in the Bill for the appointment of a Director on the Board of the Reserve Bank to represent provincial co-operative banks and also for the negotiation of certain types of bills and securities presented by such banks.

Other forms of Co-operation.—After the passing of the amended Co-operative Societies Act in 1912, the application of co-operation to purposes other than credit was greatly extended but it is only during the last few years that a general demand for producers and consumers societies has arisen. The total number of non-agricultural non credit societies was 3,035 578 for purchase and sale, 18 for production, 870 for production and sales and the remaining 1 634 for other forms of co-operation. Before the year 1918-19 there were only a few store societies all over the country. In all provinces particularly in Madras a beginning had been made in the direction of distributive co-operation among the middle classes, while in Bengal and the United Provinces some attention had been devoted to the starting of stores for students living in hostels attached to colleges. The movement obtained popular favour in view of the increasing prices of the daily necessities of life, and the profiteering which assumed serious proportions at the close of the War. Supply unions, store societies, and distributive departments attached to credit societies were organized in some provinces while arrangements were contemplated for obtaining cheap, wholesale supplies for the various distributive organizations. The work of organizing co-operative distribution in rural areas was pushed ahead with a fair amount of success under official auspices in the Punjab and Madras, but in both provinces a setback is now evident. Neither the supply unions nor the primary purchase and sale societies are in a flourishing condition. The consumers' movement in urban areas received particular attention in Bombay, Madras, Bengal,

Burma, and a few other provinces, but with the disappearance of the special conditions which generated enthusiasm in the years immediately succeeding the close of the War stagnation has set in and only a few among the numerous store societies started in these provinces have firmly established their position and continue to enjoy the loyal support of their members. Attempts have been made in two or three provinces to revive the movement by the starting of central organizations for joint wholesale purchase but the proposals have not yet taken definite shape. Apart from the Triplicane stores in Madras which stands in a class by itself the only successful consumers societies are stores for college students, some communal hostels or boarding houses and a few agencies for supply of special requisites.

In some Provinces, efforts have been made to revive the ancient handicrafts of the country and cottage industries by organizing co-operative societies for the cottage workers. Many of these societies merely provide cheap credit but in some places they undertake the supply of raw materials and the sale of manufactured goods. An important industry which flourished in India before the introduction of machinery was handloom weaving and efforts have been made to revive it by the formation of co-operative societies of handloom weavers. Most of the weavers societies are merely credit societies but some undertake the purchase of yarn for members, and others have store branches to sell the cloth produced by members. They have also been instrumental in introducing improved looms and methods among the conservative weaving classes. In Bengal and the Punjab, much success has attended the organization of central unions among weavers societies and similar intensive work in Bihar and Orissa and Bombay has also met with good results. Other industrial societies to be found in very small numbers here and there are those for gaskets or milkmen, dyers, basket and brass workers in the Central Provinces, Chamrars and Dhoms in Bombay and the Punjab, lacquerware workers, carpenters, wood-carvers, blacksmiths and potters in Mysore where the State provides special facilities in the shape of loans and technical assistance for the development of artisans societies. In Bombay the producers' movement has extended to communities of workers like coppermiths and goldsmiths, carpenters, dyers and others and drawing its inspiration from the ancient guild spirit animating the communities it aims at creating a strong economic organization among these various industrial workers and craftsmen based on self-help and self-government. Another offshoot of this movement is the starting of co-operative societies among skilled or unskilled labourers on the lines of the labour societies of Italy. The initiative came from Kashmir, while experimental societies were also started in Madras and in Bombay. The object of these is to organize labourers to tender for contracts for public or private works to eliminate the middleman contractor and to utilize the profits for the economic and social betterment of the labouring community. The Indian Industrial Commission in the course of their inquiries devoted some attention to the

development of small and cottage industries and the possibility of reviving them by the introduction of co-operation. Their recommendations on this subject were however not very definite and no action appears to have been taken on these. The development of subsidiary occupations in rural areas is also likely to come up for consideration by the Royal Commission on Agriculture in India.

An interesting development during recent years is the provision of housing through co-operative societies. A good number of housing societies have been started in Bombay City and suburbs and also in a few other centres in the Presidency like Ahmedabad and Karachi. They are generally organized on the co-partnership system, under which the society owns the houses and lets them to members at fixed rents. The scheme is feasible for such sections of the middle classes as can provide a certain proportion of the initial capital. Tenant-ownership societies have also been started. There are some building societies in Madras and a few more in Mysore, but their activities are confined mainly to the provision of capital for building schemes and only occasionally extend to the joint purchase of land or of building materials. The Punjab has only one society for co-operative housing and town planning. The Local Governments of Bombay and Madras as also the State of Mysore set apart annually some funds to be advanced to housing societies at fair rates of interest and with repayments spread over a number of years.

The province of Burma was a pioneer in the matter of cattle insurance, and to support the village insurance societies which have been started in the province, there has been organised a central re-insurance society, which receives some financial backing from Government. In the other provinces where it has been introduced co-operative insurance for cattle has made only slight progress, and in Burma, as also in the Punjab where the movement had advanced so far as to necessitate the starting of a re-insurance society there has been a setback recently.

Agricultural Co-operation—Co-operative societies have, until recently, been organized only to supply cheap credit to their members but there are various other fields of work to which they may extend their activities. The total number of agricultural non-credit societies is 1,923 of which 845 were societies for purchase and sale, 845 for production 328 for production and sale and 681 for other forms of co-operation. Grain banks have, in some provinces, been started with advantage, receiving deposits in kind and allowing these to accumulate to be sold at profitable rates or distributed to the members in times of scarcity. Such banks have been started in Bihar and Orissa, Bengal, Mysore and Coorg. Societies on a similar basis for the storage of fodder have been started in Baroda. Another direction in which the co-operative principle is being applied is the starting of societies for purchase of and distribution among members of pure and selected seed. A number of small societies for supply of seed, and seed unions have been organised in the Bombay Presidency and in the Central Provinces and

Berar. Societies for the co-operative purchase and sale of manure will also prove a great boon, and a few such stores have been established in Madras, Bengal, Bihar and Orissa and Bombay. In the Punjab and in Madras the supply of agricultural requisites has been undertaken either by the credit societies or the commission indent system or special supply unions are organised for bulk orders making contracts, distributing goods and collecting payments.

Joint sale of produce gets popular as co-operative credit thrives and agriculturists become less dependent on local traders. While Burma led the way by starting societies for the joint sale of paddy the most interesting developments in the direction have taken place in Bombay. Societies for the sale of agricultural commodities, chiefly cotton and jaggery have been started, in several districts all over the Presidency. Co-operative marketing of cotton has recently made much progress in the Dharwar, Broach and Surat districts where these have led to the starting of a few co-operative ginning factories controlled by cotton growers. This aspect of co-operation has lately attracted considerable attention and attempts similar to those made in Bombay have been made in Madras and the Punjab. In the latter province with considerable success at Lyallpur and Montgomery. In Bengal there has been a move recently to organize the sale of jute on co-operative lines. A vigorous propaganda has been undertaken for the purpose and the starting of some central depot in Calcutta is contemplated. It will indeed be a great achievement if these efforts are successful and the cultivator obtains adequate returns for his produce. At present he buys in the dearest market and sells in the cheapest. But if co-operative purchase and sale show good progress, his economic position will be much improved. Apart from separate societies for the purpose, credit societies and central banks in a few parts of the country, arrange for the joint supply of agricultural requisites. In some places, credit societies undertake the joint purchase of agricultural implements for members, while in others separate registered societies are started for the purpose of selling implements or supplying these on hire. In some provinces in Upper India, this work is performed by central banks for the societies affiliated to them. Apart from separately registered societies in Bombay, the branches of the Provincial Bank have helped considerably in the distribution of seeds, manures and fertilizers, the supply agricultural implements, and the sale of produce, particularly jaggery.

Efforts have been made in various parts of the country to solve the problem of milk-supply—to reduce the price and increase the purity—by starting co-operative dairies composed either wholly of goats or milkmen or the producers and the consumers together. The most successful of these efforts has been the group of milk supply societies started in the neighbourhood of Calcutta which have federated themselves into a union. The union has, with the help of the Calcutta Municipality and the expert officers of Government erected a well equipped modern

plant for pasteurising milk, and while the milk supply it controls has been satisfactory to consumers it is interesting to note that by co-operation the producers have also considerably improved their economic position, having paid off debts, bought more cattle, put up decent cattle sheds and accumulated substantial sums in their local societies in the shape of shares and reserves. Co-operative creameries and ghee producing societies have also been started in one or two provinces. Another interesting development is the starting of cattle-breeding societies in the Punjab and elsewhere. It is anticipated that these societies will assist in supplying the keen demand that exists for bulls of good stock. In a few provinces there are societies for rice-hulling, the manufacture of jaggery and for joint irrigation. The latter is an interesting development of co-operation which though tried also in Bombay appears to have established itself in popular favour especially in the Burdwan Division of Bengal. This tract once very flourishing has been ravaged in recent years by frequent floods and famines and the population had lost all initiative and sunk into poverty while their lands deteriorated and malaria claimed a heavy toll. The starting of irrigation societies has opened a new chapter in the history of the tract and has revived the energy of the people and brought them together for common economic endeavour. Ginning on co-operative lines has also been attempted. An interesting experiment in agricultural co-operation is the starting in the Punjab of societies for the consolidation of small and scattered holdings. These propose to regroup and re-allot the small and scattered holdings of members and if this voluntary action proves sufficient for the purpose one of the gravest evils of modern Indian agriculture will be solved without the aid of State help or legislation. After the last floods that occurred four years ago in the central parts of the Madras Presidency co-operative societies were started to enable agriculturists to reclaim their land by clearing away the layers of sand and replacing the soil. These societies received assistance from Government, both in the shape of long term capital and facilities for transport of material. The Punjab has in canal areas some societies for silt clearance and reclamation of waste lands, and Burma has led the way in the colonization of newly developed lands on co-operative lines. A number of societies have recently been started in the Punjab to promote better farming some of which merely call upon members to undertake certain improvements and introduce approved method of agriculture while others go a stage farther and employ a staff for local experiment research or demonstration work. In Bombay a beginning was made in the direction of starting co-operative societies for joint farming and the movement may lead to the evolution of a system of co-operative cultivation of land such as has been extremely successful in Italy in undeveloped tracts like those to be irrigated under the Sukkur Barrage Scheme. Proposals to encourage this form of co-operation have been submitted to the Government of Bombay by the Hind Co-operative Institute.

Co-operation has already been successful to some extent in reforming the economic

indebtedness of the agriculturist, but if the improvement in his economic condition is to be permanent it is essential that he should be prevailed upon to adopt improved methods of production. The Agricultural Departments in various provinces do undertake propagandist work with this object, but their efforts have not proved as successful as they ought to be. A co-operative society provides an effective agency for reaching the agriculturist, and in many places societies have been the means of bringing home to him the need for improved methods and have been made the centres for conducting the propagandist activities of the Agricultural Department and district Agricultural Associations. As a result, a few societies have been enterprising enough to purchase modern agricultural implements, and the machinery recommended by the Department and to use the proper manures and the certified varieties of seeds. "Wherever agriculture and co-operation have experienced the assistance which each can derive from association with the other they are fast developing a truly organic connection. To this end joint efforts are being promoted in almost all provinces as both the Departments are in charge of one Minister. This co-ordination is secured by joint conferences and joint boards of co-operation and agriculture and the starting of local agricultural associations registered under the Co-operative Societies Act. Several of these bodies have lately been started in Bihar and Orissa and in Bombay. In Bombay the taluks development associations undertake active propagandist work, hold demonstrations, and assist in the work of general economic improvement of the agriculturists. The subject of agricultural co-operation and even of agricultural credit will come under enquiry by the Royal Commission on Agriculture in India which was appointed during the year. In the terms of reference of the Commission mention is made, among the subjects for investigation of the methods by which agricultural operations are financed and credit afforded to agriculturists, the existing methods of marketing of agricultural produce and the main factors affecting rural prosperity and the welfare of the agricultural population, all of which matters have a vital bearing on the future of the co-operative movement in India.

Committee on Co-operation in India.—In July 1914, the Government of India issued a lengthy Resolution on Co-operation in India, surveying its progress in the country during the previous ten years. In October Government appointed a Committee under Sir Edward MacLagan to examine whether the movement, especially in its higher stages, and in its financial aspect was progressing on sound lines and to suggest any measures of improvement which seemed to be required. The enquiry was to be directed primarily to an examination of such matters as the constitution and working of central and provincial banks, the financial connection between the various parts of the co-operative organization, the audit, inspection and management of all classes of societies, and the utilization of the reserve funds. In its Report, which was issued in September 1915, the Committee stated that it had not

confined its enquiries to the subjects referred to it, for it had to recognise that the financial welfare of the higher stages of the co-operative system was largely based on the soundness of the foundation. The Government of India passed orders in 1918 on the recommendations in the light of the opinions of the Local Government. With a view further to elicit opinion on the recommendations, a special conference of the Registrars was convened in August 1918, to which all the Registrars and a few selected non-official co-operators were invited. The Conference was also asked to consider the suggestion made by the Committee on Co-operation that as the financing of the movement involved grave difficulties which baffled solution unless the discounting of promissory notes was arranged through an Imperial State Bank or the several Presidency Banks, a careful examination of the question was immediately called for. A proposal was made for the appointment of an expert committee, but the Government of India shelved it by stating that they would assemble the committee at some date convenient to them. The question has again assumed some importance in view of the proposal for an all India Co-operative bank referred to above and also in view of the fact that the Report of the External Capital Committee issued in 1925 makes prominent mention of the value of the co-operative organisation in developing the banking resources of the country. Pursuant to the recommendations of the External Capital Committee the Chambers of Commerce both Indian and European, have urged the appointment of a committee to enquire into the best methods of developing banking in India.

Provincial Legislation.—Under the Federal form co-operation has been made a provincial subject and also a transferred subject. The control of Co-operative Departments has been entrusted to Ministers and in Bombay the United Provinces, and the Central Provinces Bills have been drawn up for enactment by the local Legislative Councils to take the place of the Co-operative Societies Act. The Bombay Co-operative Societies Bill was introduced in the Bombay Legislative Council in July 1924. It reproduces in the main, the framework of the Act of 1912 but introduces the following important modifications—

- (i) The adoption of a scientific system of classifying societies
- (ii) The improvement of the procedure for liquidation of cancelled societies
- (iii) The extension of summary powers of recovery to the awards of arbitrators
- (iv) The provision of penalties against specified offences

After undergoing some further modifications the Bill was finally passed into law by the Bombay Legislative Council in July 1925 and now replaces the Co-operative Societies Act in the Bombay Presidency. No other provincial Council has yet enacted legislation on similar lines.

Provincial Enquiries.—In the Central Provinces, owing to the drying up of recoveries

and the issue of large advances to agriculturists to tide over the bad season of 1920-21 the funds resources of the movement were seriously depleted and the Apex Bank was able to meet its liabilities only with the financial assistance of Government. The funds resources of the Provincial Bank were replenished and the Local Government with the concurrence of the Government of India, placed credits at the disposal of the Provincial Bank and made advances direct to primary societies in the form of Tagavi loans. A Committee of Inquiry was appointed which made sweeping recommendations the most important of which was a proposal to liquidate the Provincial Bank and to place central banks in direct touch with commercial banks. This recommendation was however, subsequently turned down by the Local Government although some other recommendations such as the division of agricultural finance into short-term crop loans and long-term non-crop loans met with a considerable measure of public support in Bengal and the Punjab, the return of favourable seasons averted any breakdown of the system, which threatened to overtake the local co-operative organisations when agricultural scarcity on a wide scale caused serious difficulties some years ago. The same may now be asserted of the United Provinces where there appeared to be some danger of the strain not being quite successfully withstood. The problem there is now that of pushing ahead, and a Committee was appointed in 1923 to hold a comprehensive inquiry and to suggest the lines of future development. The Report of the Committee which was published last year contains numerous recommendations on matters of detailed administration and proposals for strengthening the official staff of the Co-operative Department. The Committee recommended that central banks should be relieved of the work of supervision and inspection which should be entrusted to a staff working under the direction of the Standing Committee of Co-operators. The Committee further suggested that a beginning might be made in the direction of constituting an apex bank for the provinces but their proposal has not found favour with the local Government. Committees of Inquiry were also appointed in Bihar and Orissa and Mysore in the former to advise about financial organisation and official control and in the latter to lay down a policy of development particularly in relation to higher finance, non-credit co-operation, agricultural improvement and the relief of indebtedness. In September 1927 on the recommendation of the Madras Legislative Council, the Government of Madras appointed a Committee of seven members to enquire into the progress of the Co-operative movement in the Presidency and to suggest suitable measures for effecting necessary improvements. The Committee has been directed to examine and make recommendations regarding the practice and organisation of the financial system, the arrangements for propaganda and supervision, and the development of co-operative production, distribution and sale. The Committee issued a detailed questionnaire and has taken evidence and visited Co-operative institutions in various parts of the Presidency. Its report is expected to be issued early in the year 1928.

Effect of Crises on Co-operation.—It is hardly possible without any close and scientific inquiry such as has not yet been carried out, to appreciate accurately the effects of the co-operative movement in enabling agriculturists to resist the rigours of a famine as also to judge the reaction of the latter on the co-operative organisations as there is an interplay of various economic forces affecting the life and industry of agriculturists the proportionate value of which cannot be estimated easily. The agricultural season of 1918-19, however, put the co-operative organisation in most provinces to a very severe test and the reports for the succeeding years afford some indication of the resisting power of the co-operative organisation.

With a better appreciation of the dependence of the agricultural finance on the vagaries of seasons, and a more systematic management of the funds of central societies it is anticipated that in future the situation arising out of a failure of rains will be satisfactorily met. In 1913 and the following months practically the whole of the country was subjected to a banking crisis of considerable magnitude but a marked feature of this crisis was a tendency to withdraw deposits from commercial institutions and to place them in co-operative banks. The outbreak of the War brought another set of influences into play and there was a temporary tendency to withdraw deposits and a temporary cessation of new deposits. The disturbance was not serious except in two or three provinces and by the end of the year 1914-15 the situation became practically normal. In two of the provinces where the situation caused some anxiety owing to the cessation of fresh deposits in central banks, the Government sanctioned advances to the extent of Rs. 5,00,000 to central societies to be utilised in the grant of urgent loans to agricultural societies or to meet withdrawals of deposits. The floods that overtook practically the whole of North Gujarat and one district of Sind in the earlier part of the monsoon of 1927 have affected the working of Co-operative Societies in the flood areas, but on the whole the movement has risen to the occasion. Early arrangements were made for helping agriculturists to resow and to replenish their stocks of grain or fodder and replace lost cattle implements or domestic necessities of life. Advances were made for these purposes at the special rate of 5 per cent interest and later on demands were investigated for rebuilding or repairing houses and either funds were provided through Co-operative agency or suitable recommendations were made to the local officials of Government. A charitable fund was also started for relief of distress among members and contributions to this were received from all parts of India and also from Russia.

Social Reform—Co-operation has in some places stimulated the desire for education and members of rural societies have been known, even at advanced ages, to receive the elements of education to enable them to put their signatures on their societies' papers, and to take a living interest in the internal work of their institutions. In Bombay, night schools for adults were started with the aid of a splendid donation made by the late Sir

Vithaldas D. Thackersey, while in the Punjab, Bihar, Bengal, and elsewhere such expenditure on education is incurred by co-operative institutions themselves. In the Punjab separate rural societies have been registered to conduct night schools and also to insist on compulsory education for the children of members. The Punjab also possesses a number of societies for promotion of better living the members of which societies lay down a social code for themselves. Breach of this Code involves punishment by fines. In Bengal attempts have been made to fight the scourge of malaria and to promote village sanitation by starting anti malarial Co-operative societies. The societies are federated into a Central union in Calcutta which supplements the local funds co-ordinating the working of the societies. Issues literature on hygiene and sanitation and arranges with local doctors for provision of free medical relief to members. There are not a few cases where a society has set its face against drunkenness, expelled members notorious for their intemperate habits and has insisted on good moral conduct and attempted to improve the standard of life. Societies have occasionally condemned excessive expenditure on marriages, and have thus indirectly trained members to habits of thrift. The liquidation of old debts again has been rendered possible to a great extent and many an agriculturist who was formerly in a state of chronic indebtedness has been relieved of all his debts and freed from the necessity of incurring new ones. Credit has been much cheapened and it is now possible for the agriculturist to borrow at 9 to 18 per cent, what he could not borrow at less than 20 to 75 per cent, formerly. It has been calculated that in interest alone the agriculturists of India, by taking loans from co-operative credit societies instead of from the village money lenders, are even now saving themselves from an unnecessary burden of over a crore of rupees. The village rates of interest have naturally gone down considerably. And the Bowkar is, in most places, not the terror and the force that he was. Business habits have been inculcated with the beneficial result that the agriculturist has learnt to conduct his own work more efficiently. Thrift has been encouraged and the value of savings better appreciated. Special societies are started in the Punjab to promote thrift, while in Bombay Bengal and Bihar & Orissa savings of members are attracted to the village credit societies and either special facilities are provided or special propaganda is conducted to induce members to save and deposit voluntarily. Association in a public institution for common good has brought home to the people the blessings of unity and litigation has often decreased in villages with Co-operative societies. In the Punjab a number of societies were started in rural areas whose members agreed to refer all disputes to arbitration by their elected committees and to abide by the awards of arbitrators. Participation in the management of societies has instilled a strong members

the important lessons of self-help and self-reliance, but the most important achievement of co-operation has been the development of a sense of communal life—a feeling of “all for each and each for all”—among members of village societies and the gradual revival of the corporate instincts which made Indian rural organisation famous in the world's history

The following statements show the progress of the co-operative movement in different provinces, and contain some information about their detailed working till the end of the official year 1925-26 —

Number of Societies for all India, showing the increase since 1906-07

	Average for 4 years from 1906-07 to 1909-10	Average for 5 years from 1910-11 to 1914-15	Average for 5 years from 1915-16 to 1919-20

Origin of Indian Emigration.—Emigration is prohibited by the Hindu Shastras, and there is little evidence of any settlement of Indians overseas in early times except in Sumatra, Java and Ceylon. Emigration for purposes of labour dates from the beginning of the 19th century. From 1800 A.D. onwards Indians crossed the Bay to the Straits Settlements to work on the sugar, spice, tobacco, and coconut plantations of Penang and this intercourse was allowed to continue for long without regulation. The first officially recorded instance of genuine recruitment for labour emigration occurred in 1830 when a French merchant named Joseph Argand carried some 150 artisans to Bourbon. The abolition of slavery in British colonies in 1834 gave the first great impetus to the movement. The sugar planters of Mauritius at once turned to India as their best recruiting ground and between 1834 and 1837 obtained at least 7,000 recruits from Calcutta. The Government of India at a very early stage realised the necessity of bringing such emigration under regulation. The Law Commission was asked to investigate the case and to make recommendations for securing the well-being of emigrants. They advised that no legislation was required except in order to prevent undue advantage being taken of the simplicity and ignorance of emigrants by providing that a magistrate should satisfy himself that all contracts were entered into freely and understood by them and in order to secure that sufficient provision was made for their accommodation and sustenance during the voyage. A copy of every engagement was also to be transmitted to the Government under which the emigrants were to live. These recommendations were embodied in the first Emigration Act (V of 1837) which also provided that contracts should be determinable after 5 years.

History of Emigration.—Under the above Act emigration during 1837 was permitted to Mauritius, British Guiana and Australia (89 men, the first and last direct emigrants to Australia). In 1838 emigration was suspended owing to agitation in England regarding the abuses to which the system was liable and a committee of enquiry reported in 1840 that emigrants were being entrapped by force or fraud, robbed of their wages and treated with brutality. In consequence emigration was prohibited (Act XV of 1842) except to Mauritius, and there control was tightened. In Act XXI of 1844 emigration under still stricter regulation was allowed to Jamaica, British Guiana and Trinidad. Act XIII of 1847 removed the restrictions on emigration to Ceylon. The emancipation of slaves in the French colonies in 1849 gave rise to a system of emigration from French Indian ports to Réunion and Bourbon, which was largely based on crimping in British territory. This practice was checked by Act XXIV of 1852. In 1858 emigration was opened to St. Lucia and in 1860 to St. Vincent, Natal and St. Kitts. In the latter year a more elaborate Act based on a convention with the French Government was passed legalising and regulating emigration to Réunion, Martinique, Guadeloupe, and French Guiana. Act XIII of 1864 marks an important stage in the history of emigration, since it elaborated

and consolidated the whole system of control. It was itself amended in 1868 and 1870 in important respects with the object of preventing epidemics on emigrant vessels and improving sanitary conditions in settlements. In 1868 emigration was permitted to Grenada, and in 1872 to Surinam. Owing to the removal of the Straits Settlements from the control of the Government of India in 1847 emigration to that colony came under all the restrictions imposed by the Emigration Act and was only permitted from the port of Negapatnam. Owing to the injury caused to the agricultural industries of the colony these restrictions were removed in 1872 subject only to magisterial control of recruitment in India. In 1870 complaints reached the Government of India of gross abuses in the treatment of emigrants in British Guiana. A commission of enquiry was appointed and their report led to important legislation in the colony for the protection of Indian immigrants, which was subsequently extended to Trinidad. Owing to similar complaints from Natal and Mauritius commissions of enquiry were also instituted in both these colonies and their reports in 1872 brought to light a number of points requiring amendment.

Recent Legislation.—In 1871 a fresh consolidating Act was passed (Act VII of 1871) by which the Acts regulating emigration to the French Colonies and two amending Acts to Act XIII of 1864 were incorporated in the general law. The question of revision of the law again came up for consideration in 1882 when several cases of kidnapping and other objectionable practices were reported to the Government of India. The opportunity was taken to depute two officials (Major Pitcher and Mr. Grierson) to ascertain in the N.W.P. and in Bengal respectively the way in which the system of recruitment actually worked the respects in which it was open to improvement and the attitude of the people towards emigration. Their reports were reviewed by the Government of India, and finally in 1883 the law was again recast and consolidated by Act XXI of that year. This Act specifies the countries to which emigration is lawful, but empowers the Governor General in Council to add to the list by notification and also to prohibit emigration to any of the countries in the list on the ground of epidemic disease and or excessive mortality among emigrants in such country or on the ground that proper measures have not been taken for the protection of emigrants or that the agreements made with them in India are not duly enforced. This Act with certain amendments of no importance to the system of indentured emigration remained in force until 1908, when a fresh revision of the law was undertaken.

Under the Act of 1908 (XVII of 1908) the countries to which emigration was lawful were the British Colonies of Mauritius, Jamaica, British Guiana, Trinidad, St. Lucia, Grenada, St. Vincent, Natal, St. Kitts, Nevis, Fiji, the Seychelles, the Netherlands Colony of Dutch Guiana and the Danish Colony of St. Croix. Emigration to St. Lucia, Grenada, St. Vincent, St. Kitts, Nevis, the Seychelles and St. Croix ceased soon after the passing of the Act, the

demanded for fresh labour having died out. Emigration to Natal was discontinued from the 1st July 1911 as the Government of India were satisfied that it was undesirable to continue to send Indian labour to that country. Emigration to the French Colonies of Réunion, Martinique and Guadeloupe had been suspended prior to the passing of the Act of 1908 on account of repeated complaints of the inadequate precautions taken for the proper treatment and repatriation of the immigrants.

The labour laws of the several Colonies provide for the protection and welfare of resident Indian labourers. The Government of India also occasionally depute to the colonies their officers to report on the condition of Indian labourers. Deputations from India visited Fiji and British Guiana in 1921. In spite of all precautions certain social and moral evils had grown up in connection with the indentured system of emigration and Indian public opinion has during the last decade been strongly opposed to it. The whole system was exhaustively examined by the Government of India in 1916 in the light of the report received from Messrs. McNeill and Chimanlal and they arrived at the conclusion that the time has come when contract labour should be abolished. The Secretary of State for India accepted this policy and authorised the Government of India to announce the abolition of the indentured system and the announcement to this effect was made in 1916.

In 1922 a further step forward was taken in Act VII of 1922 which prohibited indentured emigration and all unskilled emigration, except to countries specially approved by the Legislature. Emigration to Ceylon and Malaya was brought under control, and the definition of "Emigrant" was extended to cover all persons assisted to depart from India.

Present Position.—Indian emigration questions have recently taken on a wider aspect. The status of Indians in the Empire generally is one in which the Indian public now take keen interest. It is no longer possible to deal with the treatment of Indian labour apart from other classes of Indian emigrants and travellers. In several colonies and dominions considerable Indian communities have sprung up, which although composed largely of the descendants of indentured labourers are themselves free and lawfully domiciled citizens of the countries in which they are settled, but have not yet been placed on a footing of legal, social, political and economic equality with the rest of the population. The issues round which public interest at present centres are three—

(a) Control of emigration.

(b) Rights of Indians to admission to other parts of the Empire.

(c) Rights and disabilities of Indians domiciled overseas.

These questions may be considered separately.

Control of Emigration.—So far as unskilled labour is concerned the Government of India have assumed absolute powers of control. The terms of section 10 of the Emigration Act of 1923 are as follows—

"10 (1) Emigration, for the purpose of unskilled work, shall not be lawful except to such countries and on such terms and conditions as the Governor General in Council, by notification in the *Gazette of India* may specify in this behalf.

"(2) No Notification shall be made under sub-section (1) unless it has been laid in draft before both Chambers of the Indian Legislature and has been approved by a resolution of each Chamber either without modification or addition, or with modifications and additions to which both Chambers agree, but, upon such approval being given, the notification may be issued in the form in which it has been so approved.

Under this law emigration has been legalised to Ceylon on the following conditions

(1) The emigrant shall—

(a) have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of Ceylon or

(b) have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him

(2) The emigrant shall not, before leaving British India, have entered into a contract of service for a period exceeding one month

(3) Within six months from the issue of this Notification, or within such further period as the Governor General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that any contract of service for a period exceeding one month entered into by an emigrant shall be void

(4) No part of the cost of his recruitment, subsistence during transport or transport shall be recoverable from any emigrant and all expenses in this connection shall be defrayed from a common fund to be raised in such manner and managed by such agency as may appear suitable to the Colonial Government

(5) The Government of Ceylon shall at any time when so desired by the Governor General in Council admit and give all facilities to an Agent appointed under section 7 of the Act

(6) Within one year of his arrival in Ceylon any emigrant who has been assisted to emigrate at the cost of the common fund referred to in clause (4) shall on satisfying the Agent appointed under section 7 of the Act that his return to his home is desirable either on the ground of the state of his health or on the ground that the work which he is required to do is unsuitable to his capacity or that he has been unjustly treated by his employer, or for any other sufficient reason, be repatriated free of cost to the place of recruitment and the costs of such repatriation shall be defrayed by the Government of Ceylon or the Ceylon Planters Association

(7) If at any time there is no Agent appointed under section 7 of the Act the Government of Ceylon shall appoint a person to perform the duties of the Agent as set forth in clause 6).

(8) Within six months from the issue of this Notification, or within such further period

as the Governor-General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that no payment made in India by a recruit to an emigrant to enable him to pay off debts before emigrating shall be recoverable

(9) The Government of Ceylon shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of persons emigrating to Ceylon in accordance with this Notification

Similar conditions have been imposed in the case of Malaya. Emigration was also permitted to Mauritius for a period of 1 year only with effect from May 1st 1923, and limited to a number not exceeding 1,500 labourers. The terms were more onerous than in the case of nearer Colonies and the arrangement has now lapsed.

Admission of Indians to Other Parts of the Empire.—On the motion of the Government of India this question was discussed at the Imperial War Conference 1917 and 1918 and the policy accepted by the self-governing dominions and the British Government was embodied in the following regulations—

"(1) It is an inherent function of the Governments of the several communities of the British Commonwealth including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities

(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose of education such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement

(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition (a) That not more than one wife and her children shall be admitted for each such Indian and (b) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian

The first paragraph of this resolution has regularized the various restrictions on immigration which the self-governing dominions have from time to time adopted and which, without expressly differentiating against Indians are in practice used in order to check Indian immigration the objections to which are stated to be not racial or political but economic. Australia prohibits the entry of any person who fails to pass a dictation test of not less than 50 words in any prescribed language. New Zealand prohibits the entry of any person who has not received in advance a permit from the Dominion Government which is refused to any person regarded as unsuitable to settle in the country. South Africa prohibits the entry of any person deemed by the Minister of the Interior on economic grounds or on account of his standard or habits of life to be unsuited to the requirements of the

Union. Canada prohibits the landing of any person who has come to the Dominion otherwise than by continuous journey from the country of which he is a native and unless he possesses in his own right 250 dollars. New foundland and the Irish Free State impose no restrictions. All the self-governing Dominions have adopted special exemptions in favour of students, tourists and merchants visiting the countries for the temporary purposes of commerce, pleasure, or education. India on its side has assumed power to regulate the admission of immigrants from any other part of the Empire or foreign countries by means of passports. A Bill has also been passed by the Indian Legislature empowering the Government of India to make rules for the purpose of securing that persons not being of Indian origin domiciled in British possessions, shall have no greater rights and privileges as regards entry into and residence in British India than are accorded by the law and administration of such possessions to persons of Indian domicile. With regard to the Crown colonies and protectorates, the attitude of the Indian Government is that there is no justification for placing any restrictions on the immigration of British Indians which are not placed on other classes of British subjects and this principle has in practice been observed by the Colonial Office except in the case of Kenya colony where, as stated hereafter, the British Government has reserved to itself the right to impose restrictions on the immigration of classes of people whose entry into the colony may have an adverse effect on the economic evolution of the indigenous population.

Rights and Disabilities of Indians Lawfully Domiciled Overseas.—The policy of the Empire is summed up in the resolution of the Imperial Conference, 1921 which was recorded in the following terms—

"This Conference reaffirms that each Community of the British Commonwealth should enjoy complete control over the composition of its own population by restricting immigration from any of the other communities but recognises that there is incongruity between the position of India as an equal member of the Empire, and the existence of disabilities upon British Indians lawfully domiciled in some parts of the Empire and this Conference therefore, is of opinion that in the interests of the solidarity of the Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised."

"The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India while appreciating the acceptance of this resolution nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found as soon as may be to reach a more satisfactory position."

The Right Hon'ble Sriwasa Sastri visited the Dominions of Australia, Canada and New Zealand in the course of 1922 as the emissary of the Government of India to assist them in giving effect to this resolution. The main

object of his mission was to appeal to the Governments and public of Canada and Australia fully to enfranchise qualified domiciled Indians. In Australia, Indians resident in Queensland and Western Australia have neither the provincial nor the federal franchise. In Canada, Indians resident in British Columbia are excluded from the dominion as well as the provincial franchise. While successful in securing a more sympathetic atmosphere towards Indians, he failed to bring about any modification in the existing electoral laws.

The question of giving effect to this resolution of 1921 was raised by the Indian representatives at the Imperial Conference 1922. Their proposal was as follows—

"Let the Dominion Governments who have an Indian population let His Majesty's Government in the areas under their direct control, such as Kenya, Uganda, Fiji and other places where there are Indians resident, appoint Committees to confer with a Committee which the Government of India will send from India and explore the avenues of how best and how soonest the principle of equality implicit in the 1921 Resolution may be implemented."

This proposal was favourably received by the Dominion Premiers, excluding General Smuts and by the Secretary of State for the Colonies who cordially agreed that there should be full consultation and discussion between him and a Committee appointed by the Government of India upon all questions affecting British Indians domiciled in British Colonies and protectorates and mandated territories. In pursuance of the proposal, the Government of India appointed a Committee in March 1924 composed of Mr J. Hope Simpson, K.P., Chakravarti H. H. the Aga Khan, Sir B. Robertson Diwan Bahadur, T. Bangachariar, M.L.A., and Mr K. O. Roy with Mr R. B. Ewbank, J.R.C. as Secretary to make representations to the Colonial Office on certain outstanding questions affecting Indians in Kenya and Fiji. The Committee assembled in London early in April 1924 and dispersed towards the end of July. During this period they had several interviews with the Secretary of State for the Colonies and the officials of the Colonial Office, in which they made representations upon a variety of important matters affecting Indians in Kenya, in Fiji and in the mandated territory of Tanganyika. In regard to Kenya the representations covered all questions of interest to India dealt with in the decision of His Majesty's Government. The result of these representations was announced by Mr J. H. Thomas in the House of Commons on August 7th 1924. The situation in Kenya has also been improved as a result of the work of the Committee by the decision of the Indian community to relinquish their former attitude of non-co-operation and to accept an arrangement by which they will select five members to be nominated by the Governor to the Legislative Council. The result of the representations which the Committee made on certain outstanding questions relating to Indians in Fiji is expected to be announced shortly.

Summary of Present Position.—Outside Australia, New Zealand and Canada the position stands as follows—

(1) **South Africa.**—The main grievances of Indians, which led to a passive resistance

movement headed by Mr Gandhi, were settled by the compromise embodied in the Indians Relief Act, 1914, and by the guarantee known as the Smuts-Gandhi agreement. The substance of this agreement is embodied in the following extracts from letters

(1) Mr Gorges, Secretary for the Interior to Mr Gandhi, June 30th, 1914 "With regard to the administration of existing laws the Minister desires me to say that it always has been and will continue to be the desire of the Government to see that they are administered in a just manner and with due regard to vested rights

(11) Mr Gandhi to Mr Gorges July 7th, 1914.

By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading no matter how often he shifts his residence or business from place to place in the same township "

This has been officially interpreted to mean "that the vested rights of those Indians who were then living and trading in townships, whether in contravention of the law or not, should be respected.

In 1920 an Asiatic Enquiry Commission was appointed to investigate the grievances of Indians regarding their rights to trade and hold land in the Union. Their main recommendations were as follows —

(1) Law 3 of 1885 (Transvaal) the Gold Law of the Transvaal (Act No 36 of 1908) and Act No 37 of 1919 should not be repealed

(2) There should be no compulsory repatriation of Asiatics but

(3) Voluntary repatriation should be encouraged.

(4) There should be no compulsory segregation of Asiatics but

(5) A system of voluntary separation should be introduced under which municipalities should have the right subject to certain conditions—

(a) to lay out residential areas for Asiatics

(b) to set aside certain streets or portions of the town for Asiatic traders to which existing license holders should gradually be attracted

(6) These areas should be selected and allocated by a board of independent persons in consultation with the Municipal Council and Asiatic community

(7) In Natal the right of Asiatics to acquire and own land for farming or agricultural purposes outside townships should be confined to the coast belt say, 20 to 30 miles inland

(8) A uniform License Law applicable to all the Provinces of the Union should be possible be enacted. If that is impracticable the law relating to the issue of Trade Licenses in the Cape Province, the Transvaal and Natal should be assimilated in a comprehensive consolidating Act of Parliament providing *inter alia* —

(a) That the granting of all licenses to trade (not being liquor licenses) shall be entrusted

to municipal bodies within the area of their jurisdiction, outside those areas, to divisional Councils in the Cape Province, and in the other Provinces to special Licensing Officers appointed by the Administrator

(b) The grounds upon which an application for the grant of a new license may be refused

(c) That the reasons for the refusal to grant any license shall be recorded together with any evidence tendered for or against the application

(d) That in the case of the refusal of a license on the ground that the applicant is not a fit and proper person to hold the same or to carry on the proposed business, there shall be a final appeal to a Special Appeal Board appointed by the Administrator

(e) That municipal bodies shall have the right to prohibit the license holder, or any other person from residing in any shop, store or other place of business

(f) There should be no relaxation in the enforcement of the Immigration Laws, and more active steps should be taken to deal with prohibited immigrants who have evaded the provisions of those laws

(10) The administration of the Asiatic policy of the Government should be placed in the hands of one official under whose charge would come all administrative functions, together with the official records relating to Asiatics. This officer should also be entrusted with the duty of securing full statistics regarding Asiatics in the Union and of the arrivals in and departures from South Africa. Details of all applications for trade licenses, and transactions in connection with the purchase of land and property made by Asiatics throughout the Union should be sent to him in order to ensure the enforcement of the provisions of Section 8 of Act 22 of 1913

On the other hand he should keep in close touch with the various sections of the Indian community, see that the laws are applied in a just manner give a ready ear to any complaints or grievances and generally safe-guard their interests

No action has been taken by the Union Government to give effect to these proposals except with regard to voluntary repatriation. 6,081 Indians have returned to India from South Africa during the last 4 years of whom probably a large proportion have abandoned their South African domicile and accepted free repatriation under the official scheme

Present Position—Indians enjoy both the political and municipal franchise only in the Cape Province and the municipal franchise only in Natal. In the remaining two provinces they are not enfranchised. They are subjected to differential treatment in the matter of trading licenses, specially in the Transvaal. Their immigration into the Union is barred and severe restrictions exist on inter-provincial migration. In the Transvaal they are not allowed to acquire immovable property outside locations and on the Witwatersrand and they are subject to the restrictions of the Gold Law

The anti-Asiatic Party have made several efforts, especially in Natal further to curtail the rights of Indians. Some of these are merely irritating social disabilities, such as railway regulations debaring Indians from travelling in any other carriages except those reserved for them and similar rules restricting their use of tramways at Durban and excluding them from race courses and betting club rooms. Examples of recent anti-Asiatic legislation of major importance are

(a) The Natal Rural Dealers Licensing Ordinance, transferring the power of granting trading licences from the Licensing Officer to an elected Licensing Board, on which Indians may not sit.

(b) The Durban Land Alienation Ordinance This Ordinance, which enables Municipalities in selling land to assign it for particular communities, and to that extent to secure segregation has been allowed on condition that Asiatics are given reasonable opportunity for acquiring adequate residential sites.

Anti-Asiatic feeling in South Africa does not appear to be diminishing, and a bill for the segregation of Asiatics known as the Class Areas Bill was introduced in the Union Assembly in March 1924, which though not specifically directed against Indians, contained provisions which could be used for the compulsory segregation of all Asiatics in certain areas. Indian opinion was deeply agitated over the prospect of this legislation which it was apprehended might in the existing state of public opinion in South Africa result in the economic ruin of a large number of Indian traders in the Union. In response to the vigorous protests made by the Government of India the Union Government gave an assurance that it was their desire and intention to apply the measure if it became law in a spirit of fairness to the interests and reasonable requirements of resident Indians. The Government of India whilst welcoming the assurance were unable to rest satisfied with this position and made every effort to persuade the Union Government to abandon the project. For the moment they have succeeded, as in consequence of the unexpected dissolution of the South African Parliament the bill has lapsed.

In Natal an Ordinance was introduced in the Provincial Council in 1921 dealing with the township franchise to the detriment of the Indian community. It was again introduced in 1922 and in a modified form in 1923 but in each instance the Union Government withheld its approval. In 1923, the Union Government itself introduced a measure entitled "The Class Areas Bill, containing provisions which could be used in urban areas for the compulsory segregation of Asiatics. Indian opinion was deeply exercised over the prospects of this legislation despite the assurance of the Union Government that it desired to apply the measure in a spirit of fairness to the interests and reasonable requirements of Indian residents. But in consequence of the unexpected dissolution of the South African House of Assembly in April 1924, the Bill lapsed. Towards the end of December 1924 news was received that the Government of South Africa had given its consent to the Natal

Borough Ordinance. This measure while safeguarding the rights of Indians already on the electoral roll of Boroughs, prevents further enrolment of Indians as burgesses. Similarly the Natal Township Franchise Ordinance (No. 3 of 1925) was passed to or to render Indians ineligible for Township Franchise in future. Further towards the end of January 1925, news was received that the Union Government had gazetted a Bill to amend the Mines and Works Act in order to take powers to refuse certificates of competency to natives or Asiatics in certain occupations. The Government of India made suitable representations in the matter to the Union Government and the Select Committee to which the measure was referred altered its wording so as not to refer to Asiatics and natives directly. The Bill as amended by the Select Committee was passed by the Union Assembly but rejected by the Senate. In January 1926 it was reintroduced and in May it was adopted in a joint Session of the Senate and the Assembly by eighty three votes to sixty seven. In reply to representations made by the Government of India they were informed that there was no present intention on the part of the Union Government of extending regulations beyond the position as it existed prior to the judgment of the Transvaal Provincial Division of the Supreme Court in the case *Rex versus Hildick Smith* when it was held that certain regulations with reference to mines and works which have actually been in force in the Union of South Africa since 1911 and in certain provinces for many years before that date were not valid under sections of the Act in terms of which they were promulgated. The Government of India have also been assured that should any such extension of the scope of these regulations be contemplated in future every reasonable opportunity will be given to all the parties in the Union interested in the matter to make representations.

In July 1925 a more comprehensive Bill known as the Areas Reservation and Immigration and Registration (Further Provision) Bill was introduced in the Union Assembly. The Government of India made effective representations against the provisions of this Bill both on grounds of principle as well as of detail.

Deputation to S. Africa.

Towards the end of November 1925 the Government of India with the concurrence of the Government of South Africa, sent a deputation to South Africa the personnel of which was as follows—

G. F. Paddison Esq. C.S.I. L.O.S., Commissioner of Labour Madras—*Leader*
Hon. ble Syed Raza Ali, M.C.S.—*Member*
Sir Deva Prasad Saradchikary, Kt., C.I.E.—*Member*
G. S. Bajpai, Esq., C.S.I. L.O.S.—*Secretary*

The main purpose of the deputation was to collect as soon as possible first-hand information regarding the economic condition and general position of the resident Indian community in South Africa and to form an appreciation of the wishes and requirements of the Indian community in South Africa. Its preliminary report was received in India early in January. On the basis of the facts disclosed

in that report the Government of India felt justified in renewing their proposal for a round table conference and pressed that if that proposal was still unacceptable, there was a case for a fresh enquiry before the proposed legislation was proceeded with. Neither of these suggestions commended themselves to the Union Government who, however expressed their willingness to give the Government of India an opportunity of placing the case of the Indian Community in South Africa fully before them by offering to take the course of proposing the reference of the Areas Reservation Bill to a Select Committee before instead of after the second reading in order that the Indian objections to the Bill might be heard in respect of its principles as well as of its details. This offer the Government of India accepted and their deputation appeared before the Select Committee early in March and presented the Indian case against the Bill. Their advocacy was effective and after further correspondence with the Union Government the Government of India suggested that the right method of arriving at a real and effective solution of the Indian question would be for both parties to enter the conference without being committed in advance to any particular solution of the questions at issue. They suggested that the Union Ministers might confer informally with the Leader of the Indian deputation in order to ascertain whether the obstacles in the way of a conference could not be overcome. The suggested conversations took place at Capetown early in April and resulted in a better understanding and appreciation of the respective points of view and difficulties of the two Governments. The Union Government impressed upon the Government of India that public opinion in South Africa would not view with favour any settlement which did not hold out a reasonable prospect of safe guarding the maintenance of western standards of life by just and legitimate means and on this basis agreed to enter a conference the recommendations of which would be subject to confirmation by the Governments of both countries. They also agreed subject to the approval of the Union Parliament to postpone further progress with the Areas Reservation Bill until the results of the conference were available. The following formula was accepted by both Governments as the basis on which the conference should be held. The Government of the Union of South Africa and the Government of India have been further in communication with each other regarding the best method of arriving at an amicable solution of the Indian problem. The Government of the Union have impressed upon the Government of India that public opinion in South Africa will not view with favour any settlement which does not hold out a reasonable prospect of safeguarding the maintenance of Western standard of life by just and legitimate means. The Government of India are prepared to assist in exploring all possible methods of settling the Asiatic question and have offered to enter into a Conference with the Union Government for the purpose. Any proposal that the Conference might make would be subject to confirmation by the Governments of the two countries. The Union Government have accepted the offer of the Government of India and in order to ensure that the Conference should meet under the best auspices, have decided,

subject to the approval of the Selected Committee and Parliament not to proceed further with the Areas Reservation and Immigration and Registration (Further Provision) Bill until the results of the Conference are available."

The reception accorded by Indian opinion to the decision to hold such a conference augured well for its success. At the same time in order to enable representatives of the various political parties in South Africa to appreciate India's point of view and to strengthen the better understanding created by the visit of the Government of India Deputation to South Africa the Government of India extended and the Union Government accepted an invitation to send a representative deputation to this country. The deputation arrived in India on the 18th September 1926. They visited almost all the principal towns of India including the Khyber Pass and Landi Kotal and returned to South Africa on the 18th October 1926.

On the 16th October 1926 it was announced that the conference between the representatives of the Union Government and those of the Government of India would take place at Cape Town on the 20th of December. The Government of India Delegation to South Africa consisted of the following—

- | | |
|--|-----------|
| (1) Hon'ble Khan Bahadur Sir Muhammad Habibullah F.C.I.M., K.T. Member of Governor General's Council | Leader |
| (2) Hon'ble Mr G. L. Corbett, C.I.M. I.C.S. Secretary to the Government of India in the Commerce Department | Dy Leader |
| (3) Right Hon'ble V. S. Srinivasa Sastri, P. C. | Member |
| (4) Sir D. Arcey Lindsay, K.T., C.B.E. M.L.A. | " |
| (5) Hon'ble Sir Phiroze C. Sethna K.T. C.B.E. | " |
| (6) Sir George Paddison K.B.E. C.I. I.C.A. M.L.A. | " |
| (7) G. S. Bajpal C.I.M. C.B.E., I.C.S. Dy Secretary to the Government of India in the Department of Education Health and Lands | Secretary |

The members of the Indian Delegation left India on the 24th November and reached Cape Town on the 16th December 1926. The conference was formally opened by the Prime Minister-General Hertzog on the following day.

(2) **Kenya Colony**.—The grievances of Indians domiciled in this Colony are fully set forth in the published despatch of the Government of India, dated October 21st 1920. The controversy centred round the following points:—

(a) **FRANCHISE**.—Indians have not the elective franchise. The Government of India proposed that there should be a common electoral roll and a common franchise on a reasonable property basis plus an educational test, without racial discrimination, for all British subjects.

(b) **SEGREGATION**.—Professor Simpson who was sent to East Africa to report on sanitary matters, recommended segregation on sanitary grounds. The Government of India objected, firstly, that it was impracticable; secondly, that it was commercially inconvenient; and thirdly, that Indians are in practice unfairly treated in the allocation of sites.

(c) **THE HIGHLANDS.**—Lord Elgin decided in 1906 that as a matter of administrative convenience grants of land in the upland area should not be made to Indians. The whole area has now been given out, and the Government of India claim that there is no land left to which Lord Elgin's decision applies. This decision has now however been extended so as to prohibit the transfer of land in the uplands to non Europeans.

(d) **IMMIGRATION.**—Suggestions have been put forward for restricting Asiatic immigration into Kenya. The Government of India claim that there is no case for restricting Indian immigration and that such restrictions would be in principle indefensible.

THE SETTLEMENT.—The decisions of the British Government were contained in a White Paper presented to Parliament in July 1923. It was held that the guiding principle should be that the interests of the African native must be paramount, and in light of this it was decided—

(a) **FRANCHISE.**—A communal franchise was adopted with 11 seats for elected Europeans, 5 elected Indians, one nominated Arab, one missionary representing the Africans, and a nominated official majority. One Indian is also appointed on the Governor's Executive Council.

(b) **SEGREGATION.**—The policy of segregation as between Europeans and Asiatics is abandoned.

(c) **THE HIGHLANDS.**—The existing practice is maintained both as regards initial grants of land and transfers. A similar reservation in the low lands is offered to Indians.

(d) **IMMIGRATION.**—Racial discrimination in immigration regulations is rejected. But in the economic interests of the Africans further control over immigration is necessary. Some arrangement is required for securing a strictly impartial examination of applications for entry into Kenya. The Governors of Kenya and Uganda have been instructed to submit joint proposals for legislation.

The Government of India reviewed their decisions in a resolution published on August 18th, 1923, and recorded "their deep regret that His Majesty's Government did not feel justified in giving greater effect to the recommendations made by them and reserved liberty to reopen the case on a suitable opportunity. They stated their intention of making representations regarding the action to be taken to implement these decisions, particularly in the matter of the Immigration regulations."

Following upon the Kenya award statutory action was taken by the local administration on the franchise question. Adult suffrage on communal lines was conferred upon Indians. As regards immigration the Government of India took the opportunity to urge the postponement of the bill giving effect to the decision of His Majesty's Government until such time as the Committee proposed by their representatives at the Imperial Conference in 1923 had an opportunity of examining the question of the conditions therein embodied. Accordingly the in-

troduction of the bill was postponed at the instance of the Colonial Secretary. The Government of Kenya was also asked by His Majesty's Government for an explanatory statement regarding the motion proposed for the admission of immigration measures. The Government of India received an assurance from the Colonial Secretary that ample opportunities would be afforded for the expression of their views and that earnest attention would be given to any representation which their Committee desired to make. As has already been stated such a Committee was appointed in March 1924. The following statement made by the Secretary of State for the Colonies in the House of Commons on 7th August 1924 shows the result of the representation made by the Colonies Committee—

(1) **IMMIGRATION.**—My position is that if danger ever arises of such an influx of immigrants of whatever class, race, nationality or character as may likely be prejudicial to the economic interests of the natives I hold myself entirely free to take any action which may be necessary. Conflicting statistics which have been laid before me have not enabled me to reach a definite conclusion as regards the extent of net Indian immigration. Accordingly steps will be taken to create a statistical department to obtain accurate information with regard to persons of all races arriving in or departing from Kenya. Meanwhile the Kenya Immigration Ordinance will not be enacted.

(2) **FRANCHISE.**—I have given careful consideration to representations in favour of a common roll but I am not prepared to resist the conclusion already arrived at that in the special circumstances of Kenya, with four diverse communities each of which will ultimately require electoral representation, the communal system is the best way to secure the fair representation of each and all of these communities.

(3) **HIGHLANDS.**—I consider that the Secretary of State for the Colonies has no alternative but to continue pledges, expressed or implied which had been given in the past and I can hold out no hope of the policy in regard to agricultural land in the Highlands being reconsidered.

(4) **LOWLANDS.**—It was proposed to reserve an area in the lowlands for agricultural immigrants from India. The Committee made it plain that it is averse from any reservation of land for any immigrant race, subject to the suggestion that before applications for land in lowland areas are invited an opportunity should be taken of sending an officer experienced in Indian settlement and agricultural methods to report on the areas. At present any consideration of the matter is in suspense pending receipt from the colony of reports from the native and agricultural points of view on the areas in question.

(5) **Fiji and British Guiana.**—In certain respects Indians in these colonies are under disabilities. In Fiji, for instance, they are practically excluded from both the political and the municipal franchise. But the Indian population in these colonies belong almost entirely to the labouring classes and their grievances are mainly economic. The wages in
